INVERARY, a town in Argyleshire, containing upwards of 1800 inhabitants. Here are manufactures of linen and woollen, as also considerable works for smelting iron by means of charcoal. One ship belonging to the town is engaged in foreign trade, and about half a dozen are employed in imports of meal, coals, merchants' goods, &c. exporting wool, timber, and oak bark. It is seated on the N. W. side of Loch Fyne, near which is a castle, the seat of the Duke of Argyle, 75 miles N. W. of Edinburgh, and 45 N. W. of Glasgow.

INVERKEITHING, a town of Fifeshire, situated in a bay of the Frith of Forth, 18 miles N. W. of Edinburgh. Before the entrance of the harbour there is a large and safe bay which affords excellent shelter for ships in all winds. On the W. side of the harbour is a large, Dutch built vessel, used as a lazaretto. Here are two commodious quays, for the landing and receiving of goods; and great improvements have been lately made to accommodate the shipping still farther. Several ships belong to this place, but none of any considerable burden. Some of them sail to foreign parts and the rest are chiefly employed in the coal and coasting trade. Sometimes, between 40 and 50 vessels wait here for coals, especially in the winter season.

INVERNE'SS, a populous flourishing town, of Scotland, capital of a county of the same name, pleasantly situated on the S. bank of the river Ness, and overlooking the Frith of Murray. It has a safe and convenient harbour, and a good deal of shipping. Several large buildings have been erected on the N. side of the town, in which a considerable manufactory of ropes and canvass is carried on. It is a royal burgh, holding its first charter from Malcolm Canmore. Over the river Ness is a handsome bridge, of seven arches. The salmon fishery in this river is very considerable, and is let to some fishmongers of London. A little to the W. of this town is the remarkable vitrified fort, called Craig Phadrick; the stones, composing its walls, appear to have been partly melted by fire. Inverness is 50 miles N. E. of Fort William, and 106 N. N. W. of Edinburgh. Lat. 57. 30. N. lon. 4. 5. W.

INVERNE'SS, the most extensive county of Scotland, bounded on the W. by the Ocean; on the N. by Ross shire; on the E. by the counties of Nairne, Murray, Aberdeen, and Perth; and on the S. by those of Perth and Argyle. Its extent from N. to S. is about 45 miles; and from E. to W. 75. The northern part is very mountainous and barren. The woody mountains are the haunts of stags and roes. The capercailzie is also seen sometimes among the lofty pines; the heath is possessed by wild fowl; and the lofty summits by ptarmigans and Alpine hares. This county has several considerable lakes; being divided, in a manner, into two equal parts, by Loch Ness, Loch Oich, Loch Lochy, and Loch Eil; all which might be united by a canal, that would form a communication between the two seas. The great lakes in this county are seldom or never known to freeze; much less are the arms of the sea, even in the most northern parts of Scotland, subject to be frozen in the hardest seasons; while the Texel, and many bays and great rivers in Holland and Germany, are covered with ice. The southern part of the shire is also very mountainous, and is supposed to be the most elevated ground in Scotland. The extensive plains which surround the lakes are, in general, fertile; and the high grounds feed many sheep and black cattle, the rearing and selling of which is the chief trade of the inhabitants. Limestone, iron ore, and some traces of different minerals, have been found in this county, with beautiful rock crystals of various tints; but no mines have been worked hitherto with much success. The principal river is the Spey; but there are many others of inferior note, as the Ness, Fyers, Glass, Lochy, &c. The people in the high parts of the country, and on the western shore, speak Gaelic or Erse, but the people of fashion in Inverness, and its neighbourhood, use the English language, and pronounce it with propriety.

JOHN, succeeded Richard I. his brother, in the throne of England April 6, 1199. He was in France when his brother died; where, having been crowned duke of Normandy, he returned to England May 25, and was crowned the 28th, being then 32 years of age. His marriage with Isabella of Anjou before, who had been betrothed to Hugh earl of March, ruined his affairs in France. His passion for her was so great, that, to make her his wife, he divorced Avisa of Gloucester, under pretence of consanguinity; and without scruple broke through the engagement between Isabella and the earl of March. King John had an interview with the king of Scotland at Lincoln, and received his homage. Whilst they were there, the body of Hugh, bishop of Lincoln, reputed a saint, being brought from London to be interred, they both went out to meet it, and taking the coffin on their shoulders, bore it for some time. But notwithstanding this and other marks of respect shewn to the clergy, king John's nomination of a person to the vacant see of Lincoln was rejected with the utmost contempt by the canons of that church; which was owing to Innocent III. the then pope, resolving by all methods to prevent princes from having any thing to do with the election of bishops and abbots. The king's ill conduct at home and abroad caused great discontent among his subjects. He usurped such an absolute power, as made them apprehensive that their liberties were in danger. This alarmed the nobility, and put them upon forming schemes to oppose his arbitrary proceedings. The Poictevins having revolted, the king summoned the barons to attend him at Portsmouth, in order to pass over with him into France; but the barons, who assembled at Leicester, refused to go over with him, unless he would first restore them to their privileges, as he had promised before his coronation. The king, instead of giving them any satisfaction, began to take violent measures against them; and they, not being sufficiently prepared for their defence, at last submitted, and came to the king at Portsmouth; but when they were come, he dispensed with their attendance, upon their paying him two marks of silver for every knight's fee. King John went over to Normandy, having sent the earl of Pembroke thither with some troops before him; and what by the arms of Philip king of France, his policy and intrigues, and what by the unaccountable negligence and inactivity of John, the whole province of Normandy was re-united to the crown of France, in the year 1204, after it had been severed from it 320 years, during the government of twelve dukes, of which king John was the last; and nothing was left to John but the duchy of Guienne. But what seemed to render John completely hateful to his subjects, was the murder of his nephew Arthur, who, by an indiscreet ardour in his military enterprises, had fallen into the hands of his uncle, and was shut up in the castle of Rouen. It was at midnight when John came in a boat to the place, and ordered the young prince to be brought before him. Long confinement, solitude, and the continuance of bad fortune, had now broken this generous youth's spirit; and perceiving that his death was meditated, he threw himself in the most imploring manner upon his knees before his uncle, and begged for mercy. John was too much hardened in the school of tyranny to feel any pity for his wretched suppliant. His youth, his affinity, his merits, were all disregarded, or were even obnoxious in a rival. The barbarous tyrant, making no reply, stabbed him with his own hands; and fastening a stone to the dead body, threw it into the Seine. This inhuman action thus rid John of an hated rival; but, happily for the instruction of after princes, it opened the way to his future ruin. Having in this manner shewn himself the enemy of mankind, in the prosperity of his reign, the whole world seemed to turn their back upon him in his distress. About this time died queen Eleanor, widow of Henry II. and mother of John. Hubert, archbishop of Canterbury, died in 1205, John de Gray, bishop of Norwich, was, by the king's recommendation, chosen by the whole fraternity, whom pope Innocent III. refused to confirm, and ordered them to chuse cardinal Stephen Langton, an Englishman then at Rome, threatening them with excommunication unless they complied, which at last they did with great reluctance; and the pope immediately confirmed the election, and consecrated Langton with his own hands. John, imagining this to have been the act of the whole body, expelled all the monks of St. Austin from their monastery, and banished them out of the kingdom. He wrote a sharp letter to the pope, upbraiding him with his unjust proceedings, and threatened to break off all intercourse with Rome, unless he revoked what he had done. But Innocent, bent upon carrying his point, laid the whole kingdom under an interdict; the effect of which was, that divine service ceased in all the churches, and the sacraments ceased to be administered, except to infants and dying persons; the church-yards shut up, and the dead buried without any priest daring to assist at the funerals. King John, to be even with the pope, confiscated the estates of all the ecclesiastics who obeyed the interdict; he also ordered all the concubines of the priests, of which there were many, to be shut up in prison, and would not let them out without their paying large fines. And as there were some priests, who, in spite of the interdict, administered the sacraments, the king took them under his protection, and ordered the magistrates to hang on the spot all that should molest them; which as soon as the pope was informed of, he excommunicated all such as disobeyed the in-

terdict, or complied with the king's orders. Though John remained still inflexible, he was not without his fears, as the people generally took part with the pope; and therefore, for his better security, he raised an army under pretence of making war upon Scotland, and caused all his vassals to renew their homage to him. The pope, finding that the interdict, which had been in force above a year, had not produced the effect he designed, proceeded to excommunicate the king, though the sentence was not published till some time after. In the mean time John led his army into Ireland, against the king of Connaught, who had raised some disturbances there. At Dublin he received the homage of above thirty petty princes; after which, having taken the king of Connaught prisoner, an end was put to this commotion, and the whole island remained in obedience to the king, who, before his departure, caused the laws and customs of England to be established in Ireland. The pope absolved John's subjects from their allegiance, solemnly deposed him, and empowered the king of France to put the sentence into execution, promising him remission from all his sins, together with the crown of England, as soon as he should have dethroned the tyrant. Accordingly, Phillip made great preparations to invade England. In this crisis, Pandulph came over with the character of legate to England; and so wrought upon the king's fears, that he resigned the kingdom of England and lordship of Ireland to the pope, and acknowledged himself a vassal of the holy see. Phillip, notwithstanding the pope's prohibition, still continued his preparations for invading England, which the earl of Flanders opposing, he sent his fleet to his coast; whereupon John sent a fleet under the earl of Salisbury, which totally destroyed the French fleet; and this put a stop to Phillip's designs against England. And now the discontents of the barons having risen to a great height, and cardinal Langton siding with them, he shewed them the charter of king Henry I. advising them to make it the ground of their demands. Hereupon they entered into a confederacy to stand by one another, till their grievances were redressed, and their antient privileges were confirmed. Upon the king's return from France, the barons, having prepared themselves for war, in case the king should refuse to comply with their demands in a peaceable way, came in a body to the king about Christmas, and insisted on the restitution of the laws of St. Edward. The king was afraid to give them a flat denial, but told them they should have an answer at Easter; at which time, in the year 1215, the great men, with above 2000 knights, well mounted and armed, besides other horse and foot, met at Stamford, and advanced to meet the king at Oxford; who, being afraid to trust himself with them in conference, dispatched the earl of Pembroke to know their demands. They immediately sent back a long writing, containing the laws and customs of the kingdom in the time of the Saxons; and declared, if the king would not confirm them, they would compel him to it by seizing his castles. John, having read over the articles, fell into a violent passion, and swore he would never comply with them; upon which the barons chose a general knight, Fitzwalter, giving him the title of Marshal of the Army of God, and of the holy Church; and marching to London, were received by the citizens, and besieged the king in the Tower. The king sent the earl of Pembroke to let them know he would comply with their demands. Accordingly, both parties meeting on a day appointed, in a meadow called Runnymede, between Staines and Windsor, the king, seemingly with a good will, though compelled to it by force, signed two charters, containing all that the barons desired; the one called the Charter of Liberties, or the Great Charter, (Magna Charta,) and the other the Charter of Forests. They were not only signed by the king, but by all the lords spiritual and temporal, sealed with the great seal, and confirmed by the king's solemn oath. But the king soon repented of what he had done, and sent over his confidants into Germany, France, and Flanders, to enlist men, promising them the confiscated estates of his rebellious barons, as he called them. He also wrote to the pope, who zealously espoused his cause, excommunicated the barons, annulled the charters, and absolved the king from the oath he had taken to observe them. However, the barons made light of the pope's thunderings, and seized upon Rochester, where was a vast quantity of provisions which the king had laid up. But the foreign army being arrived, who were very numerous, all soldiers of fortune, John retook Rochester; and then dividing his army into two bodies, the earl of Salisbury with one, ravaged the southern counties, whilst the king with the other did the same by the northern. The barons, finding themselves not strong enough to keep the field, shut themselves up in London. In this distress they had recourse to a dangerous expedient; which was, to invite over Lewis, son to the king of France, promising to place the crown on his head, if he would come with a force sufficient to rescue them from the tyranny of John. Phillip sent over his son with a numerous army, notwithstanding the pope's prohibition, and his threatening prince Lewis with excommunication, the moment he set foot on English ground. That prince landed March 21, 1216, and soon made himself master of the whole county of Kent, except Dover castle. He then marched to London, where the barons and citizens took the oaths of allegiance to him. From this time he acted as sovereign. In the mean time John was in perpetual motion, marching from place to place, by all means avoiding coming to battle. His grief at length threw him into a fever, of which he died at Newark, October 18, 1216, in the 51st year of his age, and 18th of his reign, and was buried in the cathedral of Worcester. John was in his person taller than the middle size, of a good shape and agreeable countenance. With respect to his disposition, we find him slothful, shallow, proud, imperious, sudden, rash, cruel, vindictive, perfidious, cowardly, libidinous, and inconstant; abject in adversity, and overbearing in success; contemned and hated by his subjects, over whom he tyrannized to the utmost of his power; abhorred by the clergy, whom he oppressed with exactions; and despised by all the neighbouring princes of Europe. Nevertheless it must be owned that his reign is not altogether barren of laudable transactions. He regulated the form of the civil government in the city of London, and several other places in the kingdom; he was the first who coined sterling money, introduced the laws of England into Ireland, and granted to the Cinque-Ports those privileges of which they are still possessed.

JOHN, SAINT, (the Evangelist) was by birth a Galilean, by trade a fisherman, as was his father Zebedee, and his brother St. James, and from this occupation they were both called to be disciples and apostles of our blessed Saviour. He is called the disciple whom Jesus in a particular manner loved. He wrote the gospel which goes by his name, in which the divinity and Godhead of our Saviour is clearly asserted, against the Gnostics, who began even in that early age to deny it. He wrote also three epistles; the 1st, catholic or general; the other two addressed to different persons, which have always been very highly esteemed in all ages of the church. He is also, by almost all the antients, acknowledged to be the author of the book of the Revelation, which he wrote while under banishment in the isle of Patmos; whither he was sent by the tyrant Domitian, who, as Tertullian writes, had before this commanded him, for his strict adherence to the Christian faith, to be thrown into a cauldron of burning or boiling oil; but from this danger he was miraculously delivered, and lived to return, under the emperor Nerva, to Ephesus, where he died at the age of an hundred years, and was there buried.

These turf roofs make a singular appearance, many of them producing herbage, which is occasionally cut for the use of the cattle; and a few are ornamented with flowers. IRELAND, one of the British islands, lying to the W. of that of Great Britain. It is bounded on the E. by St. George's Channel, or the Irish sea, which separates it from England and Wales; on the N. E. by a channel about 20 miles broad, which separates it from Scotland; and on every other side by the ocean. It lies between lon. 5. 43. and 10. 38. W. and between lat. 51. 15. and 55. 13. N. being about 287 miles in length, and 155 in breadth. It is divided into four provinces, viz. Ulster on the north; Munster on the south; Leinster on the east; and Connaught on the west. These are subdivided into 32 counties, viz. Carlow, Dublin, Kildare, Kilkenny, King's County, Longford, Lowth, Meath, Queen's County, West Meath, Wexford, Wicklow, in the province of Leinster. Antrim, Armagh, Cavan, Down, Donegal, Fermanah, Londonderry, Monaghan, and Tyrone, in the province of Ulster. Clare, Cork, Kerry, Limerick, Tipperary, and Waterford, in the province of Munster. Galway, Leitrim, Mayo, Roscommon, and Sligo, in the province of Connaught. The air is mild and temperate, being cooler in summer, and warmer in winter, than in England; though it is not so clear and pure, nor so proper for ripening corn and fruits. It is more humid than in England; but this quality is pretty much mended, and will be more so, when the bogs and morasses are drained. In general, it is a fruitful country, well watered with lakes and rivers; and the soil, in most parts, is very good and fertile; even in those places where the bogs and morasses have been drained, there is good meadow ground. It produces corn, hemp, and flax, in great plenty; and the herds of cattle are so numerous, that their beef and butter are exported into foreign parts; the English, and foreign ships, frequently come to victual in Irish ports. The principal riches and commodities of Ireland are, cattle, hides, wool, tallow, suet, butter, cheese, wood, salt, honey, wax, furs, hemp, and more especially fine linen cloth, which they have brought to great perfection, and their trade in it is vastly increased. This country is exceedingly well situated for foreign trade, and has many secure and commodious bays, creeks, and harbours, especially on the W. coast. Their laws differed but little from those of England; and the national establishment of religion was the same. The members of parliament usually sat for life, unless upon the demise of the king of Great Britain; but, in 1768, their parliaments were made octennial. Formerly this kingdom was entirely subordinate to that of Great Britain, whose parliament could make laws to bind the people of Ireland; and an appeal might be made from their courts of justice to the house of lords in England; but, in 1782, it was declared, that although Ireland was an imperial *crown*, inseparably annexed to that of Britain (on which connection the interest and happiness of both nations essentially depended) yet the *kingdom* of Ireland was distinct, with a parliament of its own, and that no body of men were competent to make laws for Ireland, except the king, lords, and commons thereof. And some time after, this declaration being thought insufficient, the British legislature, by an express act of parliament for that purpose, relinquished all claim of right to interfere with the judgment of the Irish courts, or to make laws to bind Ireland in time to come. However, in 1801, an union of the two governments took place, under the title of the United Kingdom of Great Britain and Ireland. Ireland now sends 4 spiritual and 28 temporal lords, and 100 commoners, to meet in the imperial parliament. The lord lieutenant of Ireland, as well as the council, are appointed, from time to time, by the king. The native Irish are described as impatient of abuse and injury, quick of apprehension, implacable in resentment, ardent in all their affections, and remarkably hospitable. In the country there certainly remains a great deal of this amiable national characteristic, and even in their towns formality and etiquette are often so lost in hearty salutations, and a familiar manner of address, that the stranger soon feels himself at home, and imagines the people about him all relations. There are some considerable mountains in Ireland, the chief of which are the Knock Patrick, Sliew Bloomy, and Curlieu hills. Of all its bogs, that called the *Bog of Allen* is the most considerable. The chief lakes are Lough Lean, Lough Erne, Lough Neagh, and Lough Coribb; and its principal rivers are the Shannon, Boyne, Barrow, Liffey, Nore, and Suir. This country is said to have been formerly full of woods, but the case is now so different, that it has been found necessary to plant new ones, and to give parliamentary encouragement for their preservation and increase. The mineral productions of this country have been little known till of late years, the natives in general having given themselves (at least for some centuries past) little trouble about them. Nevertheless, copper, lead, iron, and even silver ores, have been found in the Irish mines; some vestiges of works of this sort appear at Clontarf, on the edge of Dublin Bay. In the county of Antrim, there is a mine which consists of a mixture of silver and lead, every 30lb of lead ore producing about a pound of silver. There is another in Connaught, of the same kind; and one still richer in Wicklow. About 12 miles from Limerick, two mines have been discovered, one of copper, and the other of lead. Iron mines are dispersed all over the kingdom. There are likewise quarries of marble, slate, and freestone, and the earth produces, in various places, coal and turf for firing.

plentifully and universally diffused throughout nature, pervading almost every thing, and is the chief cause of colour in earths and stones. It may be detected in plants and in animal fluids. It is found in great masses, and in various states, in the bowels of the earth in most parts of the world. Pure iron is soft and ductile, and when dissolved has a sweet and styptic taste, and emits a peculiar smell when rubbed strongly; it is attracted by the magnet and has the property of becoming itself magnetic. It is fused with great difficulty, but it gives fire by collision with flint. Iron is one of the most useful substances in the world, as every thing we possess is manufactured by its means. When converted into steel it is employed in various ways, especially for edge-tools, all which are formed in part with this metal, from the ponderous pit-saw to the finest lancet. There are 160 mosques, 1800 large caravansaries, about 260 public baths, a prodigious number of coffee-houses, and very fine basars and streets, in which are canals planted on each side with trees. The streets are not paved, but always clean, on account of the dryness of the air, for it seldom rains or snows here. Near this city, about A. D. 1030, was fought a great battle between Tangrolipix, general of the Turks, and Mahomet, sultan of Persia, (who had revolted from the great caliph of the Saracens,) in which the sultan happening to break his neck by a fall from his horse, the kingdom, by the agreement of both armies, devolved to the Turkish general. This was the beginning of the kingdom of the Seljukian Turks in Persia, which prospered near 200 years, till its overthrow by Hoccatta, the son of Ringis, the great cham of Tartary. ITALY, a large peninsula of Europe, having the Alps to the N. by which it is separated from France; and it is surrounded on all other sides by the Mediterranean sea. It is the most celebrated country in Europe, having been formerly the seat of the Roman empire, and, till lately, of the pope. It is so fine and fruitful a country, that it is commonly called the Garden of Europe. The air is temperate and wholesome, except in the territory of the Church, where it is very different. The soil is fertile, and produces wheat, rice, wine, oil, oranges, citrons, pomegranates, all sorts of fruits, flowers, honey, and silk; and in the kingdom of Naples are cotton and sugar. The forests are full of all sorts of game, and on the mountains are fine pastures which feed a great many cattle. Here are also mines of sulphur, iron, several quarries of alabaster, jasper, and all kinds of marble. Italy is a mountainous country; for besides the Alps, which bound it on the N. there are the Appennines, running quite across it from E. to W. as well as mount Vesuvius, which is a volcano, and vomits flames; besides several others. The principal rivers are the Po, the Tiber or Tivere, the Arno, the Adda, and the Adige. Italy was divided into a great number of states, which differed much in extent and importance. Between the confines of France and Swisserland, on the west and north, where the continental dominions of the king of Sardinia, namely, Piedmont, Savoy, Montserrat, part of the Milanese, and Oneglia. To the north east are the territories of Venice. South of these were the dominions of the emperor of Germany, namely, part of the Milanese and the Mantuan: and south of these, Modena, Mirandola, and Reggio, belonging to the duke of Modena. West of these, the duchies of Parma, Placentia, and Gustalla. To the south of Parma lies the late republic of Genoa, now united to France; and south-east of this, that of Lucca. Hence extended, along the coast of the Mediterranean, the grand duchy of Tuscany, now a part of France; as is also the ecclesiastical state, or territory of the pope, lying N. E. and E. of Tuscany, between the Gulf of Venice and the Mediterranean: all S. of this, is the kingdom of Naples, with its dependent islands, of which Sicily is the principal. Since the revolution in France, the greatest part of Italy N. E. of the pope's dominions has been united in one government, of which Buonaparte, emperor of France, is now king. The inhabitants have a great many good qualities, as well as bad ones: they are polite, active, prudent, ingenious, and politic; but then they are luxurious, effeminate, addicted to the most criminal pleasures, revengeful, and use all sorts of artifices to destroy their enemies, which produce a great number of assassinations. Add to these, that they are extremely jealous, and keep their wives and daughters always shut up, insomuch that they cannot go to church without somebody to watch them. However, there is no place in the world where impurity abounds, so much as in Italy; for there are great numbers of brothel-houses and courtezans, who were tolerated by the magistrates. The Italians have been the most celebrated of all the moderns for their genius and taste in architecture, painting, carving, and music, and several of them have also been eminent as writers. The women affect yellow hair, as did formerly their predecessors, the ladies of antient Rome, and make great use of paints and washes for their hands and faces.

JUPITER, or JOVE, in the heathen mythology, the sovereign god of the heathens; the son of Saturn and Ops.

JUPITER, *s.* [Lat.] in the Newtonian Astronomy, is one of the superior planets. He is about 494 millions of miles from the sun; and by moving at the rate of 29840 miles every hour in his orbit, completes his periodic revolution in 11 yrs. 315d. 8h. 58m. 27, .3s. but his sidereal period, or the time in which he moves from one fixed star to the same again, is performed in 11 yrs. 317d. 8h. 51m. 25, .6s. His synodic revolution, or the time from one of his conjunctions with the sun to the next, is finished in 398d. 21h. 15m. 45s. at a mean rate. His contents surpass that of all the other planets put together, his diameter being 11¼ of the earth's, or about 90250 miles, and consequently he is 1479 times larger than our globe. His greatest apparent diameter, as seen from the earth, is about 46″ of a degree. He turns round his axis at the prodigious velocity of about 28500 miles per hour at his equator, in 9h. 55m. 30s. and therefore there are 10174, 11-thirty-fifths of such days in one of his years. The place of his aphelion, anno 1800, was in 11 deg. 14′ 11″ of Libra, and his north node in 9 deg. 6′ of Cancer; the annual motion of the former being 1′ 2″, and of the latter only 1′. His eccentricity is .5 of his mean distance from the sun, and the equation of his orbit 5 deg. 31′ 1″. Viewed from the earth, he appears sometimes to move according to the order of the signs, sometimes to stand still, and at other times to have a retrograde motion; which proves that the earth is not the centre of his orbit. The greatest number of days he can be retrograde in a synodic revolution is 122, in which time he moves about 13 deg. contrary to the order of the signs. His proportion of light and heat is .037 of the earth's, and density .23 of the same. He is surrounded by faint substances parallel to each other, which astronomers have denominated Belts, and in which so many changes appear, that they have been supposed to be clouds by many writers, for some of them have been first interrupted and broken, and then have vanished entirely. They have sometimes been observed of different breadths, and afterwards have appeared of the same breadth. Large and various spots have been seen on these belts; and when those parts of the belts vanish, the spots also disappear. Four smaller planets, called satellites, move round this stupendous globe, in shorter or longer periods, as they are nearer to, or further removed from, his centre; which affords a very strong argument in favour of the laws of gravity. The first, or nearest, makes a revolution round him in 1d. 18h. 27m. 33s. at the distance of 260000 miles from his centre; the second, at the distance of 422000 miles, in 3d. 13h. 13m. 42s.; the third, at the distance of 668000 miles, in 7d. 3h. 42m. 33s.; and the fourth, at the distance of 1202600 miles, in 16d. 16h. 32m. 8s. All of them, by reason of their immense distance from us, seem to keep near their primary, and their apparent motion is like that of a pendulum, going alternately from their greatest distance on one side to their greatest distance on the other, sometimes in a straight line, but more frequently in an elliptic curve. When a satellite is in its superior semicircle, or that half of its orbit which is more distant from the earth than Jupiter is, its motion appears to us direct, according to the order of the signs; but in its inferior semicircle its motion appears retrograde, and both these motions seem quicker the nearer the satellites are to the centre of their primary, slower the more distant they are, and at the greatest distance of all they appear for a short time to be stationary. The synodical revolutions of the 4 satellites respectively are, 1d. 18h. 28m. 36s.—3d. 13h. 17m. 54s.—7d. 3h. 59m. 36s.—and 16d. 18h. 5m. 7s. Their distances from Jupiter in semidiameters of that planet are, respectively, 5, .96.59, .494, 15, .141, and 26, .630. From the four satellites, the inhabitants of Jupiter will have four different kinds of months; the first divides his year into 2447, 13-fifteenth parts, the 2d into 1213, 23-thirtieth parts, the third into 604, 33-sixty-first parts, and the 4th into 258, 1-eighteenth parts; so that the whole number of months in his year will be 4529, 11-fortieths. The three first satellites are eclipsed in every revolution, but the orbit of the 4th is so much inclined to the plane of Jupiter's orbit, that it escapes being eclipsed 2 years in every 6. The duration of a central eclipse of each of the satellites, beginning with the first, is, respectively, 2h. 15m. 50s.—2h. 51m. 20s.—3h. 34m.—and 4h. 46m. The eclipses of these satellites are of excellent use in determining the longitude of places on land. Observations of the sun to this planet happen almost every day, and with very good telescopes the circular shades of the satellites have been observed to pass over certain portions of his enlightened disk, in the same manner that the shade of our moon passes over the earth. Among the Alchemists, *Jupiter*. signifies the philosopher's stone.

Its qualities in medicine are drying and astringent; its berries purge upwards and downwards; and a gum, that distils from its trunk, upon being any ways cut, is reckoned a notable caustic, and is said to destroy the nits of the head.

K.

K IS the tenth letter, and seventh consonant of our alphabet. Its sound is much the same with that of the hard *c*, in *acre, cure, come,* and of *qu* in *question, quake,* &c. and has before all the vowels one invariable sound; as in *keen, ken, kid, kind.* K is silent in the present pronunciation before *n*; as *know, knife, knee, knave.* It used formerly to be always joined with *c* at the end of words, but is at present very properly omitted: thus for *publick, musick, arithmetick,* &c. we write *public, music, arithmetic,* &c. However, in monosyllables, it is still retained; as in *mock, slack, back, wreck, stick,* &c. The Romans seldom used it, except in proper names, or as a numeral. The French make no use of it, except in proper names of men and places; yet we meet with *risk, burlesk,* in good authors, instead of *risque, burlesque.* As a numeral, K denotes 250, and with a dash over it thus $\bar{K}$, 250,000.

KA'LENDAR, *s.* See CALEND, or CALENDAR.

KA'LI, *s.* [Arab.] a plant growing on the sea coasts, whose ashes are of great use in making glass or soap.

KA'LMUCS, a nation of Tartars, who inhabit that part of the Russian government of Caucasus, that lies between the river Volga, and the river Yaick (now Ural) towards the Caspian Sea; in all which immense tract there is not a house to be seen, as they all live in tents, and remove from one place to another, in quest of pasturage for their large herds of cattle, consisting of horses, camels, cows, and sheep. They neither sow nor reap, nor make hay for their cattle, so that they live without bread, or any sort of vegetable; and in the winter, their cattle fare as other wild beasts. Their food is flesh, (especially that of horses) fish, wild fowl, and venison; and they have great plenty of milk, butter, and cheese; but mare's milk is the most esteemed among them, and from it they make a strong spirit, of which they are very fond, and which is as clear as water. They are divided into a number of hordes, or clans, each under their own particular khan, and all acknowledging the authority of one principal khan, who is called orchicurtikhan, or king of kings, who derives his pedigree from Tamerlane. All of them, however, have gradually submitted to the government of Russia, or live at present under its protection. They are pagans. They wear coats of stuff, or silk, above which they wear a large, wide, fur coat of sheep skins, and a cap of the same. Their cattle are large, and their sheep are of the largest kind, having great fat tails, weighing from 25 to 30 pounds; their ears hanging down like our dogs, and, instead of wool, they have soft curled hair, so that their skins are converted into fur coats. Their horses are small, but swift, hardy, and strong; and many of them pace naturally, and trot at an incredible rate. They eat the flesh of camels, cows, and sheep, but universally give the preference to that of the horse. When they go upon any expedition, they have no regard either to bridges or boats; they no sooner come to a river than in they plunge with their horses, and, sliding from their backs, hold fast by the manes till they get over, and then immediately mount again, and proceed. They live but 4 months at most in the deserts, and inhabit a most pleasant country all the rest of the year (when it is not overflowed) tending their flocks and herds, fishing and hunting. When they go upon an expedition, every one takes a sheep with him for his provision, and three horses, which he rides alternately; and when any of them fail, they kill it, and divide the flesh, putting pieces of it under their saddles, and after riding some time upon it, they eat it without any farther preparation. Their kibbets, or tents, are large, and surprisingly warm, having a fire in the middle, and a hole at the top to let out the smoke; they are 24 feet in diameter, and capable of being enlarged or contracted at pleasure; they are all round, the sides being made of a kind of checkered wicker-work, and the cross sticks neatly jointed, for folding together, or extending. The kibbet withstands wind and rain well, and is erected with greater ease and in less time than we could set up an officer's tent. The small pox is as much dreaded among the Kalmucs as the pestilence among us. When any of them are seized with it, they immediately break up their camp and flee, leaving the sick person in one of their kibbets, or tents, with a killed sheep, part of which is roasted and part raw, and a jar of water, and some wood for fire; if they recover they follow the horde, but this seldom happens, for they mostly die for want of attendance. In a more extensive sense, however, the Kalmucs' country includes both the Kalmuc and Mongul Tartars, who both formerly composed but one people. The Mongul Tartars are partly independant, and partly subject to China.

E. according to captain King, who visited this country in 1779. The true Kamtschadales are a people of very remote antiquity, and have for many ages inhabited this peninsula. There are, at present, very few idolaters among them, the Russians having bestowed great pains, and been very successful, in converting them to Christianity. Schools are likewise established in many of the Ostrogs, where the children of both the natives and Cossacks are instructed gratuitously in the Russian language. The Russians first discovered the country in the year 1697, and, in 1699, 60 Russian soldiers, with as many Cossacks, penetrated into the heart of the peninsula, levying a tribute of furs in their progress. Their government, considered as a military one, is mild and equitable in a high degree. The natives are permitted to chuse their own magistrates, with all the privileges they had ever enjoyed, who refer to the governor of Kamtschatka such cases only as, from their intricacy or heinousness, they do not choose to decide upon themselves. Bolcheretsk is the principal place, situated on the S. W. coast, in lat. 52. 55. N. lon. 156. 57. E.

KENDAL, also called KIRBY CANDALE, (that is, a church in a valley) a handsome town of Westmoreland, the largest in the county, and much superior to Appleby, in trade, wealth, buildings, and population. It has been long noted for its woollen manufactories; particularly knit stockings, a thick stuff, called *cottons*, for the clothing of the people in the West Indies, and for sailors' jackets, and linsey-woolsey. There is likewise a considerable tannery; and fish-hooks, waste silk, and wool cards, are manufactured here. The mills for scouring, fulling, and friezing cloth, and for cutting and rasping dying-wood, &c. are well worth seeing. So early as the reigns of Richard II. and Henry IV. Kendal was noted for its manufactures, special laws having been

enacted in those reigns, for the better regulation of the Kendal cloths; and such has been the spirit and industry of the inhabitants, that they have continued to flourish ever since, notwithstanding the disadvantage of possessing no water-carriage. Kendal is pleasantly situated in a valley, among hills, upon the river Kent, or Kant, over which it has two stone bridges, and one of wood, with a harbour for boats, and communicating by a canal, with all the late inland navigations, 46 miles S. of Carlisle, and 259 N. KENT, a county of England, bounded on the W. and S. W. by Surry and Sussex; on the N. by the Thames; on the E. and S. E. by the German Ocean and the Straits of Dover; and on the S. by Sussex and the English Channel. From E. to W. it is about 58 miles, and from N. to S. from 30 to 36. It is divided into five lathes, under each of which are several hundreds, which contain 2 cities, 39 market towns, 408 parish churches, 1180 villages, near 40,000 houses, and about 220,000 inhabitants. In the soil and face of the country there is great diversity. The banks of the Thames are low and marshy, but backed by a range of chalky eminences, sometimes rising to a moderate height. This kind of hard chalky soil, inclining to barrenness, extends to the N. E. extremity of the county, and thence round to Dover, exhibiting its nature in the lofty white cliffs, which here bound the island, and produce that striking appearance at sea which probably gave it the name of *Albion*. The S. part of Kent, called the Weald, is a flat, woody tract, of a clayey soil; fertile, but unwholesome on account of its moisture. It terminates in the great marsh of Romney. The midland and western districts are a happy mixture of hill and vale, arable and pasture, equal in pleasantness, and variety of products, to any part of England. This county produces, beside the usual objects of agriculture, large quantities of hops; fruit of various kinds, especially cherries and apples, of which there are large orchards for the London markets; madder for dying; timber in the woody parts; and birch twigs for brooms, which form no inconsiderable article of commerce for the metropolis. The country inland from Dover, consisting chiefly of open downs, is excellent for feeding of sheep; and many bullocks are fattened to an extraordinary size in Romney marsh. Its manufactures are but trifling. The principal rivers, besides the Thames, are the Medway, Darent, Stour, Cray, and Rother. Maidstone is the county town.

KENTUCKY, a country of N. America, situated in its central part, near the lat. of 38 deg. N. and 85 W. lon. It is bounded on the N. and N. W. by the Ohio; on the E. by Virginia; on the S. by the Tenassee State, including the country of the Upper Cherokees; and on the W. and S. W. by the Mississippi and the Cherokee river. It is about 390 miles in length from E. to W. and from 20 to 150 in breadth from N. to S. and is at present divided into 9 counties, 7 of which are Lincoln, Fayette, Bourbon, Mercer, Jefferson, Nelson, and Maddison. The principal rivers are the Ohio, the Kentucky, the Licking river, the Red river, the Elkhorn, Dick's river, Green river, Salt river, Cumberland, and the Great Kenhaway, or New river. These are all navigable for boats almost to their sources, for the greatest part of the year. The soil is amazingly fertile; the inhabitants distinguish its quality by first, second, and third rate lands; and scarcely any such thing as a marsh or swamp is to be found. This country has a more temperate and healthy climate than the other settled parts of America. Kentucky was purchased, by the State of Virginia, of the Indians, in 1775, and formed into an independent state in 1792. In 1790, the number of inhabitants was 73,677, and from its rapid increase in population, may now probably be estimated at 200,000. There are many considerable towns, the principal of which are Lexington and Washington.

The Guebres are numerous, who are chiefly employed in manufactures of stuffs and silk. Here are some mines of copper, lead, and iron; also sheep, which lose their fleeces in spring, and become as naked as sucking pigs; the inhabitants drive a great trade in their wool. Sirgian is the capital.

KERMES, *s.* is a roundish body, of the bigness of a pea, and of a brownish red colour, covered, when most perfect, with a purplish gray dust. It contains a multitude of little distinct granules, soft, and when crushed yields a scarlet juice. It is found adhering to a kind of holme-oak. In Spain it is used as a cordial for lying-in women, and prevents abortion; it is also of great use in dying. Before the last century it was understood to be a vegetable excrescence; but we now know it to be the extended body of an animal parent, filled with a numerous offspring, which are the little red granules.

Considerable quantities of beef, butter, hides, and tallow, are exported. It contains 84 parishes, about 19,400 houses, and 107,000 inhabitants. Iron ore is to be had in most of the southern baronies, and here are several spas, or medical springs. The principal rivers are the Blackwater, Feal, Gale and Brick, Cash in Mang, Lee, Flesk, Laune, Carrin, Farthin, Finny, and Roughty. The county town is Tralee.

The palace was formerly the seat of Mr. Molineaux, secretary to the late king (George II.) when prince of Wales, but afterwards became the residence of the late prince and princess of Wales, who greatly improved both the house and gardens. Every year, in the spring, the river here swarms with millions of little eels, scarcely as big as goose-quills, which the inhabitants catch, on the top of the water, with small nets, and scouring off their skins by an art which they have, make them into cakes, (reckoned here a dainty) which they fry and eat. It is a great thoroughfare, on the lower road between Bath and Bristol, and is seated on the river Avon, over which it has a bridge of 15 arches, (and another bridge over the Chew) 5 miles S. The inhabitants are about 5800. Its former trade of stuffs, however, is much declined, on account of the general use of cotton goods; but its carpet manufactory has greatly increased; and it is still the first market in England for pile, or plush carpets, which, for beauty of colour and patterns, exceed any other. These are frequently called Wilton, from having been first made at that town; but, at present, by much the greater part are made at Kidderminster. The silk and worsted trades have also been introduced here, and employ about 2000 hands. The goods go chiefly to Portugal, and their carriage has been much facilitated by the late canal communications. It is seated under a hill, on the river Stour, 14 miles S. The use of the kidneys is to separate the urine from the blood, which, by the motion of the heart and arteries, is thrust into the emulgent branches, which carry it to the little glands, by which the serocity being separated, is received by the orifice of the little tubes, which go from the glands to the pelvis, and from thence it runs by the ureters into the bladder. It is situated on the Gwandrath Vach, a branch of the Towy, which empties itself into that river, at its efflux into the British Channel, 9 miles S. of Carmarthen, and 224 W. by N. of London. Market on Wednesday and Saturday. Fairs on May 24, July 22, and October 29.

KILDA, St. a small island of Scotland, one of the Hebrides about 11 leagues W. of North Uist. The inhabitants live chiefly by fishing and catching wild fowls. In the latter employment they are amazingly adventurous, being let down by a rope from the summit of high, precipitous rocks, where they clamber among the rugged cliffs, in search of the eggs and nests of various birds. But the more safe and common method of catching these fowls is, by spreading a large net over the face of the rock where they lodge, in which great numbers are at once entangled, and lowered down into a boat. St. Kilda is the most westerly island of Great Britain. Lat. 55. 48. N. lon. 8. 18. W.

The surface is generally level, and the soil fertile, and being proper for tillage, produces corn, wool, marble, and a species of coal, which, like charcoal, burns without smoke, is very durable in burning, and, without any blaze, produces an uncommon heat. The country abounds with fine plantations, and is, from the purity of the air, esteemed extremely healthful. The principal rivers are, the Barrow, which bounds it on the E. the Suir, which forms its southern boundary; and the Nore, which crosses it from N. to S.

KILLARNEY, a beautiful lake of Kerry, in Munster, otherwise called Lough Lean, from its being surrounded by high mountains. It is properly divided into three parts, called the lower, middle, and upper lakes. The northern, or lower lake, is about 6 miles in length, and from 3 to 4 in breadth. The country on this and the eastern boundary, is here and there diversified with gentle swells, many of which afford beautiful prospects of the lake, the islands, and the surrounding scenery. The S. shore is composed of immense mountains, rising abruptly from the water, and covered with woods of the finest timber. On the side of one of these mountains is O'Sullivan's Cascade, which falls into a lake with a roar that strikes the timid with awe. The view of this sheet of water is uncommonly fine, appearing as if it were descending from an arch of wood, which overhangs it above 70 feet in height from the point of view. Coasting along this shore affords an almost endless entertainment, every change of position presenting a new scene; the rocks hollowed and worn into a variety of forms by the waves, and the trees and shrubs bursting from the pores of the sapless stone, forced to assume the most uncouth shapes, to adapt themselves to their fantastic situations. The promontory of Mucruss, which divides the upper from the lower lake, is a perfect land of enchantment; and a road is carried through the centre of it, which unfolds all the interior beauties of the place. Among the distant mountains, Turk appears an object of magnificence; and Mangerton's more lofty, though less interesting, summit, soars above the whole. The passage to the upper lake is round the extremity of Mucruss, which confines it on one side, and the approaching mountains on the other. Here is that celebrated rock, called the Eagle's Nest, which produces wonderful echoes. A french horn sounded here, raises a concert superior to 100 instruments, in some situations; and the report of a single cannon is answered by a succession of peals resembling the loudest thunder, which seems to travel the surrounding scenery, and die away among the distant mountains. The upper lake is about 4 miles in length, and from 2 to 3 in breadth; it is almost surrounded by mountains, from which descend a number of beautiful cascades. The islands in this lake are numerous, and afford

an amazing variety of picturesque views. The centre lake, which communicates with the upper, is small in comparison with the other two, and does not shew an equal variety. The shores, however, are in many places, indented with beautiful bays, surrounded with dark groves of trees, some of which have a very picturesque appearance, when viewed from the water. The eastern boundary is formed by the base of Mangerton, down the steep side of which descends a cascade, visible for 150 yards. This fall of water is supplied by a circular lake near the summit of the mountain, called the Devil's Punch Bowl; which, on account of its immense depth, and continual overflow of water, is considered as one of the greatest curiosities in Killarney.

It is the grand entrance into the Highlands in those parts, and is formed by lofty mountains impending over the Garray, which rushes through in a deep, darksome, and rocky channel, overhung with trees, forming a scene of horrible grandeur." Formerly this was a pass of much difficulty and danger, a path hanging over a tremendous precipice, threatened destruction to the least false step of the traveller. At present, a fine road, formed by the soldiery lent by government, gives an easy access to the remote Highlands; and the two sides are joined by a fine arch.

KI'LLOUGH, or PORT ST. ANNE, a town of Down in Ulster, 76 miles N. by E. of Dublin. It lies N. of St. John's Point, and has a good quay, from which considerable quantities of barley are exported. Here is a profitable manufacture of salt. At a small distance from the town, near the sea is a rock, in which there is an oblong hole, whence a strange noise is heard, at the ebbing and flowing of the tide somewhat resembling the sound of a huntsman's horn. At the coming in of the tide whilst the waters are beating up under the rock, a cold air bursts from it with a mixture of spray; but as the waters retire during the ebb, there is a strong draft of air sets in at the hole, to fill up to prevent the vacuum which the retiring of the water would produce. In an open field, about a quarter of a mile from the town, there is a very curious cave, about 27 yards long, which has a winding passage, two feet and a half broad, with three doors in it, besides the entrance leading to a circular chamber, three yards in diameter, where there is a fine, cool, limpid well.

He is the fountain of honour, and has the sole power of conferring dignities and titles of honour; as creating dukes, earls, barons, &c. In gaming, a card with the picture of a king, in whist, next to an ace. KING GEORGE'S SOUND, the name given by Captain Cook, in 1778, to the harbour which he discovered on the W. coast of N. America, at the mouth of a great river, in lon. 126. 48. W. and lat. 49. 33. N. But the natives called it Nootka, the name now generally adopted by the English. Upon the sea coast the land is tolerably high and level; but within the Sound, it rises into steep hills, which have an uniform appearance. The trees of which the woods are com-

posed, are the Canadian pine, white cypress, and two or three other sorts of pine. In general, the trees grow here with great vigour, and are of a large size. About the rocks and borders of the woods were seen some strawberry plants, and raspberry, currant, and gooseberry bushes, all in a flourishing state. The principal animals seen here were racoons, martens, and squirrels. Birds are far from being numerous, and those that are to be seen are remarkably shy, owing, perhaps, to their being continually harassed by the natives, who take them for food, and use their feathers as ornaments. The variety of fish is not very great here, yet they are in greater quantities than birds. The principal sorts are the common herring, a silver-coloured bream, and another of a brown colour. The stature of the natives is, in general, below the common standard; but their persons are not proportionably slender, being usually pretty plump, though not muscular. The women are, in general, of the same size and proportion as the men. Their bodies are always covered with red paint, but their faces are ornamented with a variety of colours, a black, a bright red, or a white colour; the last of which gives them a ghastly and horrible appearance. They appear to be docile, courteous, and good-natured; but they are quick in resenting injuries, and as quickly forget them. A rattle and a small whistle are the only instruments of music that were seen among them. Their houses consist of very long, broad planks, resting upon the edges of each other, tied in different parts with withes of pine-bark. Their furniture consists principally of chests and boxes of various sizes, piled upon each other, at the sides or ends of their houses, in which are deposited their garments, and whatever they deem valuable. They have also square and oblong pails, and bowls to eat their food out of, &c. From their curing their fish in their houses, and leaving the bones and fragments in heaps of filth before the doors, and from their houses being without chimneys, their habitations have a strong disagreeable smell of train-oil, fish, and smoke.

KING'S BENCH, *s.* is a court in which the king was formerly accustomed to sit in person, and on that account was moved with the king's household. This was originally the only court in Westminster-hall, and from this it is thought that the courts of Common Pleas and the Exchequer were derived. As the king in person is still presumed in law to sit in this court, though only represented by his judges, it is said to have supreme authority, and the proceedings in it are supposed to be *coram nobis*, that is, before the king. This court consists of the lord chief justice, and the other justices or judges, who are invested with a sovereign jurisdiction over all matters, whether of a criminal or public nature. It frequently proceeds on indictments found before other courts, and removed by certiorari into this. Persons illegally committed to prison, though by the king and council, or either of the houses of parliament, may be bailed in it; and in some cases even upon legal commitments. Writs of mandamus are issued by this court, for the restoring of officers in corporations, &c. unjustly turned out, and freemen wrongfully disfranchised. This court is now divided into a crown side and plea side; the one determining criminal, and the other civil causes. The officers of this court, on the crown side, are the clerk and secretary of the crown; and on the side of the pleas there are two chief clerks or prothonotaries, and their secretary and deputy, the custos brevium, two clerks of the papers, the clerk of the declarations, the signet and sealer of the bills, the clerk of the rules, clerk of the errors, and the clerk of the bails; to which may be added the filazers, the marshal of the court, and the cryer.

They consist of 16 different districts or tribes, which are often at variance with each other, and with their neighbours. Their dialects appear to have no analogy with any known language, and their history and origin are utterly unknown. Those belonging to the districts of Wapi, Angusht, and Shalkha, submitted to Russia in 1770. The Thetshan tribe is so numerous and warlike, and has given the Russians so much trouble, that its name is usually given by them to the whole Kisti nation. The Ingushi live in villages near each other, containing about 20 or 30 houses; they are diligent husbandmen, and rich in cattle. Many of their villages have a stone tower, which serves, in time of war, as a retreat to their women and children, and a magazine for their effects. These people are all armed, and have the custom of wearing shields. Their religion is very simple, but has some traces of Christianity. They believe in one God, whom they call Dailé, and, on the first day of the week, rest from labour. They eat pork, and have a fast in spring, and another in summer. They observe no ceremonies either at births or deaths; but they allow of polygamy, and, at certain times, a sheep is sacrificed by a person who seems to be considered as a kind of priest, as he is obliged to live in a state of celibacy. A singular sort of hospitality is attributed to these people by major Rennel. When a guest, or stranger, comes to lodge with them, one of the host's daughters is obliged to receive him, to unsaddle and feed his horse, take care of his baggage, prepare his dinner, pass the night with him, and continue at his disposal during his stay."

KNIGHT, (the *gh* in this word and its compounds and derivatives is mute, and pronounced as if spelt *nite*) *s.* [*cniht*, Sax.] among the Romans, was a person of the second degree of nobility, following immediately that of the senators. At the ceremony of conferring this honour, he had a horse given him, which was kept at the public charge, with which he was to serve in the wars. *Knight*, in a modern sense, properly signifies a person, who, for his virtue and prowess, is by the king raised above the rank of gentlemen, into a higher class of dignity and honour. Knighthood was formerly the first degree of honour in the army, and conferred with much ceremony on those who had distinguished themselves by some notable exploit in arms. The ceremonies at their creation have been various; the principal was a box on the ear, and a stroke with a sword on the shoulder: they put on him a shoulder-belt, a gilt sword, spurs, and other military accoutrements: being thus armed as a knight, he was led to the church. Camden describes the manner of making a knight bachelor among us, which is the lowest and most antient order of knighthood, to be thus: the person kneeling was gently struck on the shoulder by the prince, and accosted in these words; "Rise, and be a knight, in the name of God." *Knight* is also understood of a person admitted into any order, either purely military, or military and religious; as *Knights* of the Garter, of Malta, of the Holy Ghost, &c

KOEI-TACHEOU, a province of China, one of the smallest in that empire, and full of inaccessible mountains. It is inhabited by a people who are independent, and who would never submit to the laws of the empire. However, the emperor has found means to build forts therein, and garrison some of the towns; but all the taxes they can raise here will not defray the expence. This province is remarkable for its copper mines, and, between the mountains there are several fruitful valleys. They have neither silk nor cotton, and therefore they make their cloth of a sort of grass, like hemp. Their cows, stags and wild hens are numerous, and the horses are the best in China.

KONINGSBERG, the capital of the kingdom of Prussia, with an university, and a magnificent palace, in which is a hall 274 feet long, and 59 broad, without pillars to support it, and a handsome library. The town-house, the exchange, and the cathedral, are fine structures. The tower of the castle is very high, and has 284 steps to the top, whence there is an extensive prospect. There are 18 churches in all, of which 14 are Lutherans, 3 Calvinists, and 1 is Romish. The number of houses is about 3800. The town is about 7 English miles in circumference, and including the garrison of 7000 men, contains 60,000 inhabitants. It stands on the Pregel, a navigable river, which here falls into the eastern extremity of the Frische Haf, an inlet of the Baltic. No ships drawing more than 7 feet water can pass the bar, and come up to the town; so that the large vessels anchor at Pillau, a small town on the Baltic, which is the port of Koningsberg; and the merchandise is sent up in smaller vessels. On June 16th, 1807, this place fell into the hands of the French, together with vast quantities of military stores (chiefly provided by England) which the allied armies of Prussia and Russia were obliged to abandon, in consequence of the defeat they had sustained on the 14th, in the battle of Friedland. It was, however, restored to Prussia by the peace of Tilsit, which was signed on the 6th July following. The trade of Koningsberg is very considerable. It is 125 miles N. of Warsaw. Lat. 54. 42. N. lon. 20. 48. E.

KORIACS, a nation on the borders of Kamtschatka, tributary to the Russians. There are two sorts of Koriacs; those who are properly called by that name have a fixed residence, the others are wanderers, and are known by the appellation of Rein-deer Koriacs. Their flocks are very numerous, and they maintain them by conducting them to those cantons that abound with moss. When these pastures are exhausted, they seek for others. In this manner they wander about incessantly, encamping under tents of skin, and supporting themselves with the produce of their deer, which are as serviceable for draught to the Koriacs, as the dogs are to the Kamtschadales. Their country is terminated to the S. by the peninsula of Kamtschatka, and the Gulf of Penginsk; to the E. by the Ocean; to the N. by the country of the Tchoukchis; and to the W. by the Tongouses, the Lamouts, and the Yakouts. The number of fixed Koriacs scarcely exceeds, at present, 900; and though it is not easy to calculate that of the wandering Koriacs, it is imagined

that they do not much surpass that amount. Their regular occupation is hunting and fishing; but every season will not permit them to follow it. During these intervals, shut up in their profound habitations, they sleep, smoke, and get drunk. Like the Kamtschadales, they live upon dried fish, and the flesh and fat of the whale and sea-wolf. Rein-deer is their favourite dish. Vegetables also form a part of their food; they gather in autumn various sorts of berries, of a part of which they make themselves a refreshing beverage, and the rest is bruised to powder, and kneaded with the oil of the whale or sea-wolf. Their passion for strong liquors, increased by the dearness of brandy, and the difficulty of procuring it, has led them to invent a drink equally potent, which they extract from a red mushroom, known in Russia as a strong poison, by the name of moukhamorr. The wandering Koriacs have the same characteristic outlines as the Kamtschadales. Among the women, particularly, there are very few who have not sunk eyes, flat noses, and prominent cheeks. The men are almost entirely beardless, and have short hair. The Koriacs acknowledge a Supreme Being, the Creator of all things, and imagine that the sun is his throne, or palace. They address no prayer to him; goodness, they say, is his essence; all the good that exists in the world proceeds from him, and it is impossible that he should do an injury. The principle of evil they consider as a malignant spirit, and, to appease his wrath, offer up, as expiatory sacrifices, various animals newly born; as rein-deer and dogs, also the first-fruits of their hunting and fishing, and whatever they possess that is most valuable.

KOSTROMSKOE, a government of the Russian empire, formerly included in that of Moscow; it is bounded on the W. by Jaroslaviskoe, and on the N. by Vologadskoe. The capital Kostrom, is seated on the river Kostroma, at its junction with the Volga, 168 miles N. E. of Moscow.

KRAKEN, *s.* a monstrous sea animal, of which the following description is given by Pontoppidon, an author of great respectability in his Natural History of Norway: "Our fishermen, (says the author,) unanimously and invariably affirm, that when they are several miles from the land, particularly in the hot summer days, and by their distance, and the bearings of some points of land, expect from 80 to 100 fathoms depth, and do not find but from twenty to thirty; and more especially if they find a more than usual plenty of cod and ling; they judge that the kraken is at the bottom; but if they find by their lines, that the water in the same place still shallows on them, they know he is rising to the surface, and row off with the greatest expedition, till they come into the usual soundings of the place; when, lying on their oars, in a few minutes the monster emerges, and shews himself sufficiently, though his whole body does not appear. Its back, or upper part, which seems an English mile and a half in circumference (some have affirmed more) looks at first like a number of small islands surrounded with something that floats like sea-weeds; at last, several bright points or horns appear, which grow thicker the higher they emerge, and sometimes stand up as high and large as the masts of a middle-sized vessel. In a short time it slowly sinks, which is thought as dangerous as its rising; as it causes such a swell and whirlpool, as draws every thing down with it, like that of Malestrom."

KREKYTHE, a town of Carnarvonshire, seated on the Irish Sea, near Traeth Amarver Bay, 12 miles S. by E. of Carnarvon, and 237 N. W. of London. Market on Wednesday.

KUBESHA, a large town of Asia, in the country of the Lesguis, one of the seven Caucasian nations, between the Black Sea and the Caspian. Col. Gaeber, who wrote an account of these countries in 1728, gives the following description of this very curious place: "Kubesha is a large strong town, situated on a hill, between high mountains. Its inhabitants are excellent artists, and make very good firearms, sabres, coats of mail, and several articles in gold and silver, for exportation. They have likewise, for their own defence, small copper cannon, of three pounds calibre, cast by themselves. They coin Turkish and Persian silver money, and even rubles, which readily pass current, because they are of the full weight and value. In their valleys they have pasture and arable land, as well as gardens; but they purchase the greater part of their corn, trusting chiefly for their support to the sale of their manufactures, which are much admired in Turkey, Persia, and the Crimea. They are generally in easy circumstances, and are a quiet, inoffensive people, but high-spirited and independent. Their town is considered as a neutral spot, where the neighbouring princes can deposit their treasures with safety. They elect yearly twelve magistrates, to whom they pay the most unlimited obedience; and, as all the inhabitants are on a footing of the most perfect equality, each individual is sure to have, in his turn, a share in the government. In the year 1725, their magistrates, as well as the usniel, or khan of the Caitaks, acknowledged the sovereignty of Russia, but without paying any tribute."

The inhabitants of the neighbourhood of Lapatka, who were themselves called Kuriles, gave these islanders the same name, as soon as they became acquainted with them. They are 22 in number, exclusive of the very small ones. The northernmost island, which is called Shoomska, and the next which is named Paramonsic, were first visited by the Russians in 1713, and at the same time brought under their dominion. The others, in order, are at present made tributary, down to Ooshesheer inclusive. Ooshesheer is the southermost island the Russians have yet brought under their dominion, but they trade at Ooroop, which is the eighteenth. A group of islands lies to the S. W. which the Japanese call Jeso; a name which they also give to the whole chain of islands between Kamtschatka and Japan. The southernmost, called Matmai, hath been long subject to the Japanese, and is fortified and garrisoned on the side toward the continent.

L.

L IS a semi-vowel, or liquid consonant, the eleventh letter of the English alphabet. In the Saxon it was aspirated, as in *hlaf*, Sax. a loaf; as it is at present by the Spaniards, and by the Cambro-Britons, in *llan*, a temple. The figure of the capital L we borrow from the Saxons, which is the same as that of the Romans, who likewise seem to have taken theirs from the Λ of the Greeks, with one of its sides placed upon the line, thus, ⊾. It is pronounced by putting the tongue to the palate, and breathing from the throat. At the end of a monosyllable it is always doubled, as in *fall, kill*, &c. but at the end of a word of two or more syllables it is written single, as in *doubtful*; as it likewise is when it occurs in the middle of compound words; for though we write *skill* and *full*, when they are alone, with a *ll*, yet, when they are compounded, we leave out an *l* in each, as in *skilful*. When it comes before *e*, at the end of a word, it is pronounced as if the *e* came before it, as in *bible, feeb'e, title*. As a numeral, it stands for 50, and when a line is drawn over it, thus, $\overline{L}$, for 50,000. *L.* also stands for *Libra*, a *Pound*; also for *Liber*, a *Book*.

LABRADOR, an extensive country to the E. of Hudson's Bay, in N. America. The climate even about Hay's River, in only Lat. 57. N. is excessively cold during winter. The snows begin to fall in October, and continue falling, by intervals, the whole winter; and, when the frost is most vigorous, in form of the finest sand. The ice on the rivers is then eight feet thick; port wine freezes in a solid mass; brandy coagulates; and the very breath falls on the blankets of a bed in the form of a hoar frost. The sun rises in the shortest day at five minutes past nine, and sets five minutes before three; in the longest, it rises at three, and sets about nine. The ice begins to disappear in May, and hot weather commences about the middle of June, which, at times, is so violent, as to scorch the faces of the hunters. The animals in these countries are, the moose-deers, stags, reindeers, bears, tigers, buffaloes, wolves, foxes, beavers, otters, lynxes, martens, squirrels, ermines, wild cats, and hares. The feathered kinds are geese, bustards, ducks, partridges, and all kinds of wild fowl. Their fish are whales, morses, seals, cod fish, and a white fish preferrable to herrings; and, in their rivers and fresh waters, pike, perch, carp, and trout. All the quadrupeds in these countries are clothed with a close, soft, warm fur; and even the dogs and cats from Britain, that have been carried into Hudson's Bay, on the approach of winter have changed their appearance, and acquired a much longer, softer, thicker coat of hair than they originally had. In summer there is, as in other places, a variety in the colour of the several animals; when that season is over, which holds only for three months, they all assume the livery of winter, and every sort of beasts, and most of their fowls, are of the colour of the snow: every thing animate and inanimate is white. The climate is remarkably healthy, and few parts of the world produce better furs. There are several Moravian settlements on the E. coast, the principal of which is Nain.

LANCASHIRE, a county of England, bounded on the W. by the Irish Sea, on the N. by Cumberland and Westmoreland, on the E. by Yorkshire, and on the S. by Cheshire. It is 74 miles from N. to S. (including a detached hundred on the north-west, called Furness, which is separated from the rest by a creek, at the head of Morecambe Bay) and from 15 to 44 in its greatest breadth. It is divided into 6 hundreds, which contain 26 market towns, 62 parishes, 894 villages, about 43,000 houses, and 260,000 inhabitants. The air, in general, is very healthful, the inhabitants living to a great age. This county comprises a variety of soil and face of country; but, upon the whole, it is one of those which are the least favoured as to natural advantages, a proof of which is the antient thinness of its population, shewn by the very small number of parishes into which it is divided. The hundred of Furness is a wild and rugged region, stored with quantities of iron ore and slate, and covered with a growth of underwood, which is cut in succession, and made into charcoal for the use of iron furnaces. The eastern part of the county between the Ribble and the Mersey, comprising the antient forests of Wyresdale and Bowland, is mountainous, and generally barren; but the southern part of this tract between these two rivers is flat, quite from the sea to the commencement of the ridge called Blackstone-edge, that separates this county from Yorkshire. Much of this is a fertile country, though occasionally deformed by the black turf bogs, here called mosses, some of which are of large extent, and absolutely impassable in wet seasons. In the north east part of this division, are some lofty hills, the most noted of which is Pendle Hill. The remaining part is varied with hill, dale, and moor. The natural products of this county are of little consequence, except the coal and turf with which its southern parts abound. Of the former is a species, called cannel, far exceeding all other, not only in making a clear fire, but for being capable of being manufactured into candlesticks, cups, standishes, snuff-boxes, &c. and of being polished, so as to represent a beautiful black marble. Lancashire is little adapted for a corn country, not only, in many parts, from the nature of its soil, but from the remarkable wetness of its climate; the land, however, is singularly fitted for the growth of the potatoe. All the rivers afford salmon; and the Mersey is visited by annual shoals of smelts, here called sparlings, of remarkable size and flavour. As a commercial and manufacturing county, Lancashire is distinguished beyond most others in the kingdom. Its principal manufactures are linen, silk, and cotton goods; fustians, counterpanes, shalloons, beys, serges, tapes, small wares, hats, sail-cloth, sacking, pins, iron goods, cast plate-glass, &c. Of the commerce of this county, it may suffice to observe, that Liverpool is now the second port in the united kingdom. The principal rivers are the Mersey, Irwell, Ribble, Lune, Leven, Wyre, Hodder, Roche, Duddon, Winster, Ken, and Calder, and it has two considerable lakes, Winandermere, and Coniston Water. Lancaster is the county town.

LANCASTER, the county town of Lancashire, is an antient, well-built, and improving town, containing about 1160 houses, and 1600 families. On the top of this castle is a square tower, called John of Gaunt's Chair, where there is a fine prospect of the mountains of Cumberland, and of the course of the Lune; the view towards the sea extending to the Isle of Man. The town hall is a handsome structure. Lancaster carries on some foreign trade, especially to the West Indies, America, and the Baltic. The exports are hardware, woollen goods, candles, and cabinet work, for the making of which last it is noted; and it has also a manufacture of sail-cloth. It is seated on the river Lune, which here forms a port for vessels of moderate size, and over which it has a new stone bridge of five elliptical arches, 66 miles S. of Carlisle, and 235 N. N. W. of London. Lat. 54. 4. N. lon. 2. 56. W. Markets on Wednesday and Saturday, and one on every other Wednesday for cattle.

LAPLAND, a large country, in the N. part of Europe, and in Scandinavia, lying between Norway, Sweden, Russia, and the sea. It is divided into Danish, or North Lapland; Swedish, or South Lapland; and Russian or East Lapland; It is extremely cold, and in some places they never see the sun for three months in the year; and the country is all covered with snow the greatest part of the year. It has, properly speaking, neither spring nor autumn, the seasons change so suddenly. The sky is generally serene, and the air healthy, it being subject almost to continual winds. They sow no corn, but have good pastures, which fatten their cattle speedily. This country is full of rocks and mountains; and the principal animals are foxes, martens, bears, elks, wolves, castors, ermines, and rein deer. The last is the most useful animal they have; for it serves to draw the sledges over the snow with surprising swiftness; likewise the skin serves them for clothing, and their flesh for food. Their huts are made with poles, about 14 feet high, and they fix one end in the earth in a circle, about 12 feet broad. These poles meet at the top, and form a sort of cone; and the outsides are covered with the skins of rein-deer and rags; they are open at the top, to let out the smoke; and here they pass their winter. They are very poorly clad, and often lie upon the snow. When they have a mind to change their habitations, they take away the skins and rags, and leave the poles standing. Their chief merchandises are dried cod, and other fish, and the skins of rein-deer: they have also some furs. They are of a short stature, with a large head, broad forehead, blue eyes, broad flat noses, and short, straight, coarse, black hair. They are a rude, brutal sort of people, though some of them have embraced Christianity, which has not mended their morals. They live a great while without the assistance of physicians, and their hair never turns gray. Instead of bread, they make use of dried fish, which they reduce to powder. They are very fond of spirituous liquors, and are never sober when they can purchase them. They seldom stay long in one place, but rove about continually, leaving the poles of their huts standing, as was before observed.

LEICESTER, (*Lester*) the capital of Leicestershire, is an antient place, and though declined from its former magnitude, is still large and populous, but not a handsome town. In the Saxon Heptarchy it was the see of a bishop, and the chief city of the Mercian kingdom. It was at one time a most wealthy place, and, if we may believe Matthew Paris, had 32 parish churches. At present, it contains 5 churches, near one of which are the famous ruins of a Roman wall, composed of ragstone and Roman brick, and imagined to be a remnant of a temple of Janus, erected on the spot 2000 years ago. Here is also a Roman milliary, (the oldest known in Britain, and containing the first inscription mentioned in this island,) which was found near Thurmaston, in 1771; it now forms the centre of an obelisk, in one of the principal streets, surmounted with a lamp. The hall and kitchen of its antient castle, (a prodigious building, where the great duke of Lancaster held his court, who added 26 acres to it, which he inclosed with a brick wall) are still entire. The former is lofty and spacious, and the courts of justice, at the assizes, are held in them. Here is also one of its gateways, with a very curious arch, the tower over which is now turned into a magazine for the county militia. Here is a very spacious market-place, with one of the largest markets in England for corn and cattle. The

combing and spinning of wool into worsted, and manufacturing it into stockings by frames, is the chief business of the town and neighbourhood. In some years 100,000£. have been returned in these articles. Its fairs, which are upon a large scale, for sheep, horses for the collar, cattle, cheese, &c. are on May 12th, July 5th, October 10th, and December 8th. It is divided into 6 hundreds, which contain 12 market towns, and 200 parishes, the air is healthy, and the soil, in general, strong and stiff, composed of clay and marl. It affords great quantities of rich grazing land, and is peculiarly fitted for the culture of beans, for which it is proverbially noted. Toward the N. W. the Bardon Hills rise to a great height; and, in their neighbourhood lies Charnwood, or Charley Forest, a rough and open tract. Farther to the N. W. are valuable coal-mines. The N. E. parts feed great numbers of sheep, which are the largest, and have the greatest fleeces of wool, of any in England; they are without horns, and clothed with thick long flakes of soft wool, particularly fitted for the worsted manufactures. The E. and S. E. part of the county is a rich grazing tract. This county has been long famous for its large black dray-horses, of which great numbers are continually sent up to London, as well as for its horned cattle and sheep, which supply the London markets with the largest mutton; and its reputation has been much extended by the great skill of the late Mr. Bakewell, of Dishley, who bred every species of domestic quadrupeds to the utmost perfection of form and size. The manufacture of stockings is the principal one in this county. Its chief rivers are the Avon; the Soar, anciently the Leire; the Wreke; Anker; Swift; Eye; and Welland.

It is a large and populous town, containing many handsome houses; but the greater part of the antient buildings are neither elegant nor commodious. The number of inhabitants is estimated at 12,000. As the town is situated on both sides of the harbour, it is divided into N. and S. Leith. The harbour is secured by a grand stone pier, at the mouth of the little river, called the Water of Leith. This harbour is now greatly improved, and accommodated with an elegant draw-bridge and a good quay; and when the proposed new basin and docks are added, this place will become in every respect, a safe, capacious, and convenient station for trading vessels. The commerce of Leith is very considerable; and the vessels employed in the London trade are, in general, of a large size, and constructed with peculiar elegance. The largest ships in this port, however are those employed in the Greenland whale fishery. Leith is well situated for the navigation of the eastern seas. LI'MA, a city of S. America, capital of Peru, founded by Francis Pizarro in the beginning of the year 1535. It has an university, and gives its name to the principal audience of Peru. The streets are handsome and straight, but the houses are generally only one story high, on account of the earthquakes. However, they are pretty, and much adorned, having long galleries on the front. One part of the roofs is covered with coarse linen cloth, and the others only with reeds, which is not inconvenient, because violent rains are not known here; but the rich inhabitants cover theirs with fine mats, or beautiful cotton cloths. There are trees planted all round their houses, to keep off the heat of the sun. What the houses want in height, they have in length and depth; for some of them are 200 feet long, and proportionably broad, so that they have 10 or 12 large apartments on the ground floor. The royal square is very handsome; and in the middle is a fountain, of bronze, adorned with the image of Fame, which spouts out water. On the E. and W. sides are the public structures which are well built. The river which crosses Lima forms canals or streams, which run to most of the houses, and serve to water their gardens, &c. The city is about 4 miles in length, and 2 in breadth, and is divided into 5 parishes. They make use of mules to draw their coaches, and of these there are about 5000. The churches and convents are exceeding rich, and divine service is performed in them with a magnificence scarcely to be imagined. The ornaments, even on common days, exceed, in quantity and richness, those which many cities of Europe display on the most extraordinary occasions. Lima is the seat of the viceroy, whose office is generally triennial, and contains several courts, as that of the viceroy, of the archbishop, of the inquisition, of the consulada or commerce, and of the wills. Earthquakes are here very frequent, and some have done this city a great deal of damage, particularly that in 1746, by which it was almost destroyed. The inhabitants are so rich, that when the viceroy, sent from Spain in 1682, made his public entrance into the city, they paved the street he was to pass through with ingots of silver. It is said, that the inhabitants are very debauched, but, at the same time, extremely superstitious, having a strong belief in the power of charms; that about a fourth part of the city consists of monks and nuns, who are not more chaste than the rest; that if any one happen to rival a monk he is in danger of his life, for they always carry a dagger under their frocks; that the most profligate of them think they can atone for all their crimes, by hearing a mass, or kissing the robe of St. Francis or St. Dominic; and that then they return to their former practices. Lima is advantageously seated on the centre of the spacious, fertile, and delightful valley of Rimac or Lima, the whole of which it commands without any difficulty, on a small river of the same name, near the sea. Lat. 12. 5. S. lon. 76. 24. W.

It is a vast semicircle of stones, of very large dimensions, laid without mortar, and connected only by their uniform shape. Upon the whole, this city has an air of antient greatness, arising, in a great measure, from the number of monastic ruins; most of which are now converted into stables, outhouses, &c. The cathedral, a stately Gothic pile, one of the largest in England, is its glory; it stands on so lofty a hill, that it may be seen 50 miles to the N. and 30 to the S. and is particularly admired for its interior architecture, which is in the richest and lightest Gothic style. The famous great bell, called Tom of Lincoln, requires, at least, 15 able men to ring it. The chief trade here is in coals brought by the Trent and Fossdyke; and oats and wool, which are sent by the river Witham. Here is a small manufacture of camlets. It is 32 miles N. E. of Nottingham, and 133 N. of London. Markets on Tuesday and Friday.

LINCOLNSHIRE, a county of England, bounded on the N. by the Humber, which divides it from Yorkshire; on the E. by the German Ocean; on the S. E. by the Wash and part of Norfolk; on the S. by Cambridgeshire and Northamptonshire; on the S. W. by Rutland; on the W. by the counties of Leicester and Nottingham; and on the N. W. by Yorkshire. It is 77 miles from N. to S. and 48 in breadth, where widest. It is divided into three parts, namely, Holland on the S. E. Kesteven on the S. W. and Lindsey on the N. It contains 30 hundreds, 1 city, 33 market towns, 630 parishes, and 260,000 inhabitants. Its principal rivers are the Trent, Humber, Witham, Welland, Ancam, Nen, and Dun. The air is various, according to its three grand divisions. The soil in many places is very rich, the inland part producing corn in great plenty, and the fens cole-seed, and very rich pastures; whence their breed of cattle is larger than that of any other county in England, except Somersetshire; their horses are also excellent, and very large; their hunting hounds and hares are peculiarly noted for their extreme swiftness; and their sheep are not only of the largest breed, but are clothed with a long thick wool, peculiarly fitted for the worsted and coarse woollen manufactures.

LI'SBON, antiently called Olisippo, and by the Moors Olisibona, the capital of Portugal, a large, rich, and cele-

brated city, one of the principal in Europe, with an university. The squares, public buildings, and palaces, were magnificent; but it was almost totally destroyed by an earthquake, Nov. 1, 1755. The new town is much more handsome than the former: the plan is regular; the streets, some of which are more than three miles in length, and the squares, are spacious, and the buildings are elegant. The harbour will contain 1000 sail of ships, which ride in the greatest safety; and the city, being viewed from the southern shore of the river, affords a beautiful prospect, as the buildings gradually rise above each other, in the form of an amphitheatre. The number of inhabitants is estimated at 270,000, of which the negroes and mulattoes make a sixth part. They reckon here more than 20,000 houses, 40 parish churches, and 50 convents of both sexes. The patriarch, who is generally a cardinal, officiates here in greater pomp than the pope himself; and the rich ornaments of his church seem to have absorbed several years' revenue of the Brazils. It is remarkable, that the pipes of the organ, in the patriarchal church, are placed horizontally. Both the entrances to the harbour, close by the sea, are defended by two forts. Lisbon is seated on the river Tajo, 10 miles from the mouth of it, 178 W. by N. of Seville, and 255 S. by W. of Madrid. Lat 38. 42. N. lon. 9. 9. W.

LITHUANIA, or LITWA, a large country of Europe, between Poland and Russia. It is about 300 miles in length, and 250 in breadth, and is watered by several large rivers, the principal of which are, the Dnieper, Dwina, Niemen, Pripecz, and Bog. It is a flat country, like Poland, and the lands are very proper for tillage. The soil is not only fertile in corn, but it produces honey, wood, pitch, and vast quantities of wool. They have also excellent little horses, which they never shoe, because their hoofs are very hard. There are vast forests, in which are bears, wolves, elks, wild oxen, lynxes, beavers, gluttons, wild cats, &c. and eagles and vultures are very common. In the forests, large pieces of yellow amber are frequently dug up. The country abounds with Jews, who, though numerous in every other part of Poland, seem to have fixed their head-quarters in this duchy. "If you ask for an interpreter," says Mr. Coxe, "they bring you a Jew; if you come to an inn, the landlord is a Jew; if you want post horses, a Jew procures them, and a Jew drives them; if you wish to purchase, a Jew is your agent; and this, perhaps, is the only country in Europe where Jews cultivate the ground; in passing through Lithuania, we frequently saw them engaged in sowing, reaping, mowing, and other works of husbandry." The peasants of this country are in a state of the most abject vassalage. The establishment of religion has heretofore been the Romish, but there were Lutherans, Calvinists, Socinians, Greeks, and even Turks, as well as Jews. It was formerly governed by its own dukes, but afterwards united with the kingdom of Poland; this union was ratified in the diet at Wilna, by a formal instrument, in the year 1401; and in 1569, the two countries were so united as to form but one state, under one prince. It was formerly divided into 9 palatinates, viz. Wilna, Troki, Polotsk, Novogorodeck, Witepsk, Brzesk, Mscislaw, Minsk, and Livonia. In 1772, the empress of Russia forcibly compelled the Poles to cede to her all that part of Lithuania bordering on Russia, including about one-third of the country. This

she erected into the government of Polotsk and Mohilof; and, in 1793, in conjunction with the king of Prussia, she extended her dominion over almost the whole of Lithuania. What is called Prussian, or Little Lithuania, about 100 miles in length, and 50 in breadth, was settled, in 1720, by Frederick William, with French, Franconian, and Swiss Protestants, by whose skill and industry this once desolate country has been extremely well cultivated. At present it is under Russia.

LITURGY, *s.* [*liturgie*, Fr.] a form of prayers used in public worship. The English *liturgy* was first composed, approved, and confirmed in parliament, *anno* 1548, the offices for the morning and evening prayer being then in the same form as they stand at present, excepting that there was no confession and absolution, the office beginning with the Lord's prayer. In the communion the ten commandments were omitted; the offertory was made with bread and wine mixed with water; and in the prayer for Christ's church militant, thanks were given to God for his wonderful grace declared in his saints, in the Blessed Virgin, the patriarchs, prophets, apostles, and martyrs; and the saints departed were commended to God's mercy and peace: to this the consecratory prayer, now used, was joined as a part, only with some words now left out, petitioning that the bread and wine might be to us the body and blood of Jesus, the beloved Son, &c. In baptism, besides the form of the cross made on the child's forehead, another was made on his breast, with an abjuration of the devil to go out of him; after which the child was dipped three times in the font, if well, but otherwise, sprinkled. Besides these, some other ceremonies were omitted in the office for the sick, as is supposed, in 1551, when the form was altered at the solicitation of Calvin. The last review of the liturgy was in 1661, and the last act of uniformity, enjoining the observance of it, is 13 and 14 of Car. II can 4

LIVADIA, formerly ACHAIA, a province of Turkey in Europe, bounded on the N. by Janna and Albania; on the E. by the Archipelago; on the S. by the Morea; and on the W. by the Mediterranean; about 180 miles in length, and 35 in its mean breadth. This province comprehends antient Greece, properly so called, which included the provinces of Acarnania, Etolia, Ozolœa, Locris, Phocis, Doris, Epicnemidis, Bœotia, Megara, and Attica. In this country were the celebrated mountains, Parnassus, Helicon, and Cythæron. The most considerable places at present, are Athens, Lepanto, and Livadia.

LIVADIA, an antient, large, and populous town of Turkey, in the province of that name. It carries on a considerable trade in wool, corn, and rice, with which it furnishes all Greece: and is built round a mountain, which terminates in a peak, having on it a castle. It is situated on the gulf of Lepanto, 28 miles N. of Corinth, and 72 S. W. of Larissa. Lat. 38. 40. N. lon. 23. 26. E.

LIVERPOOL, or LEVERPOOL, a large, flourishing, and populous sea-port town of Lancashire, consisting of at least 12,000 houses, and 80,000 inhabitants; although, so late as the year 1565, it was a mere fishing hamlet, containing only 138 householders and cottagers; while 12 barks, containing 223 tons, and navigated by 75 men, made up the sum of its maritime riches, and formed the embryo of its present commercial greatness. Respecting the antiquities of this town, hardly any thing is known with certainty; the only monument of the kind now standing is an old tower near the lower end of Water street, the remains of which have long been used as a prison. The date of its erection is involved in obscurity; but it was long the residence of the earls of Derby. In 1644, this town, then in the hands of the commonwealth, was besieged by prince Rupert, nephew to king Charles I. and taken, after a vigorous defence of one month, during which they often repulsed the besiegers with great slaughter. It was not till the year 1699, that Liverpool became a distinct parish; for before that time, it was only a hamlet to the parish of Walton, about 3 miles off, having only a parochial chapel of ease, the present church of St. Nicholas: it is now however become, with respect to

extent of commerce, next to the metropolis; as by estimates which have been made, it appears that Liverpool navigates one-twelfth part of the shipping, and has one-fourth of the foreign trade, of Great Britain; that it has one-half of the trade of London, and one sixth of the general commerce of the kingdom. The slave trade (now happily abolished) formed a considerable branch of the commerce of this port, and is computed to have employed one-fourth of the ships belonging to it; that it had five eighths of Great Britain's share of this iniquitous traffic, and three-sevenths of that of Europe. The trade to Ireland is very considerable; to which country and the Isle of Man several packets, adapted for passengers, sail almost daily; many ships are also sent to the Greenland whale fishery; the coasting trade hence to London employs a great number; and many good ships have been built here, some for the East Ind a trade. Liverpool communicates, by the rivers Mersey and Irwel, with Manchester; and by the river Weaver with the heart of Cheshire, particularly the salt works of Northwich, Middlewich, Winsford, &c. The Sankey canal facilitates the conveyance of coal from Ravenhead, and the duke of Bridgewater's canal communicates with the Birmingham, Worcester, Staffordshire, and Grand Trunk, to London. The Leeds canal will unite Liverpool and Hull; and the Ellesmere canal has communicated with the Dee, and is shortly expected to do so with the Severn. The docks of Liverpool form a prominent feature of the town, and give this port a decided preference over most others in the kingdom: of these it has 13; five wet docks, in which the water is retained by large flood gates, and the ships kept constantly afloat; three others, which are left dry at low water, and called dry docks; with five graving docks, in which vessels are repaired: there is also a small dock for the use of the duke of Bridgewater's flats. The construction of the wet docks is laborious and expensive; that called the Old Dock (the first made in Liverpool,) is 200 yards long, and is about 80 wide; with flood-gates 23 feet high, and 34 wide. Its site was a *pool*, which, tradition says, was formerly frequented by a bird of the cormorant kind called a *liver*; and that hence the town was called *Liverpool*, and the liver adopted as its *crest*. The second made was the Salthouse Dock, of an irregular form, but having a length of quay of 640 yards, with flood gates of the same dimensions as those of the Old Dock. The next made was George's Dock, 250 yards long and 100 broad; with flood-gates 25 feet high, and 38 wide; at the expense of 21,000£. To which succeeded the King's Dock, 290 yards long, and 90 broad; with flood-gates 25 feet high, and 42 wide; and finished at the expense of 20,000£. The last is that named the Queen's Dock, 270 yards long and 130 broad; with flood-gates the same as the preceding; at the expense of 25,000£. Each of these wet docks has a master, with a salary of 100 guineas per annum, whose business is to superintend the management of the flood gates, the docking and undocking of the ships at tide-time, &c. The docks have watch, scavengers, and lamps, distinct from those of the town; and the ships are secured against accident by the prohibition of fires, combustible materials, &c. under suitable fines. Liverpool has many public buildings; among which are, the Exchange or Town-hall, first built in the year 1750, but the interior of which was destroyed by fire in 1795; since which it has been rebuilt in an elegant style, and is now appropriated to the purpose of the judicial and other offices for the police of the town; contiguous to this are the Exchange Buildings, an extensive range, newly built by subscription; in the centre of which is to be erected a monument, commemorative of the victories and death of the gallant Nelson;—the prison, so large as to have at one time contained 2000 prisoners of war;—the Corn Exchange, lately erected in Brunswick-street;—the Custom House, centrally situated, but of mean appearance;—the Tobacco Warehouse, rented by government at 500£. per annum, and capable of containing 7000 hogsheads;—the Infirmary, first opened in 1749, and receiving about 1500 patients annually, besides relieving a great number of out-patients; the two wings of this elegant structure are used as an hospital, for the maintenance of decayed seamen belonging to the town; contiguous to which is the Lunatic Hospital:—the Blue-coat Hospital, for 230 boys and 50 girls;—the Poor House, a neat building;—the Recovery Ward, for persons infected with fevers; the Alms-houses, an asylum for poverty and old age;—the Dispensary, for supplying the afflicted poor with medicines and advice;—the School for the Blind, in which music, the making of baskets, floor cloth, foot bears, &c. have been successfully taught to this unfortunate class of beings;—there is also an institution for the restoring of drowned persons, and another called the Ladies' Charity, for the delivery and relief of poor married women in child bed.—To these may be added the Theatre, in Williamson's Square, built in 1772, at the expence of 6000£. but lately considerably enlarged;—also the Panorama, Music Hall, and Freemason's Hall, in Bold Street. The coffee-houses and news-rooms are numerous, among which the Athenæum, Union, and especially the Lyceum, deservedly rank among the first public buildings of the town. Liverpool has 12 churches, namely, St. Nicholas, or the Old Church, St. Peter's, St. George's, St. Thomas's, St. Paul's St. Anne's, St. John's, Trinity, St. James's Christ Church, St. Mark's, and All Saints; some of which are neat, and others elegant; besides 4 chapels belonging to the establishment, and one Scotch church or kirk. LIVONIA, a province of the Russian empire, situated to the E. of the gulf of Riga, which with that of Esthonia, has been reciprocally claimed and possessed by the three bordering powers of Russia, Sweden, and Poland; and, for more than two centuries, was a constant source and perpetual scene of the most bloody wars. It was finally wrested from the Swedes by Peter the Great, and confirmed to the Russians by the peace of Nystadt, in 1721. It now forms the Russian government of Riga or Livonia, of which the town of Riga is the capital. It is about 250 miles from N. to S. and 150 from E. to W. The land is so fertile in corn, rye, and barley, that it is called the granary of the North; and it

would produce a great deal more, if it were not so full of woods and morasses. The fish that abound here are salmon, carp, pike, flat-fish, and many others. In the forests are wolves, bears, elks, rein deers, stags, and hares. The domestic animals are very numerous; but the sheep bear a bad sort of wool, resembling goat's hair. Here are a great number of forests, which consist of birch trees, pines, and oaks; and all the houses of the inhabitants are built with wood. They export vast quantities of flax, hemp, honey, wax, leather, linseed, skins, and pot ash. The czar, Peter the Great, perceiving the inhabitants did not like the change of sovereigns, compelled them to abandon their country, and drove many of them as far as the Caspian Sea; but being persuaded to recall them, most of them perished before the edict was published, so that he was obliged to re-people their country with other nations.

LONDON, the metropolis of Great Britain, one of the largest and most opulent cities in the world, is mentioned by Tacitus as a considerable commercial place in the reign of the Roman emperor Nero. In its most extensive view, as the metropolis, it consists of *The City*, properly so called, the city of Westminster, which was once a mile from London, and the borough of Southwark; beside the suburbs in Middlesex and Surry, within what are called the Bills of Mortality. London and Westminster are situated in Middlesex, on the N. side of the river Thames. Southwark is seated on the opposite bank in Surry. The extent of the whole from Limehouse and Deptford to Millbank and Vauxhall, is above 7 miles; but the greatest breadth does not exceed 3. With respect to the government of this metropolis, the city is divided into 26 wards, each governed by an alderman. From the aldermen the lord mayor is annually chosen. There are likewise 236 common councilmen, a recorder, two sheriffs, who are also sheriffs of Middlesex, and other officers. The government of Westminster is vested in the high steward, an under steward, and the high bailiff, all chosen also by the dean and chapter. The suburbs are under the jurisdiction of the magistrates of Middlesex. Among the public buildings, St. Paul's cathedral, as the most conspicuous, first claims attention. This beautiful, yet modest fabric, is 2292 feet in circumference, and 365 in height to the top of the cross. It is inferior to none in

Europe, in magnificence and nobleness, except St. Peter's at Rome. Westminster Abbey is a grand specimen of Gothic architecture, said to have been founded by Sebert, king of the East Saxons, in 610. Having been destroyed by the Danes, it was rebuilt by Edward the Confessor, in 1066. Henry III. pulled down the Saxon pile, and began to build the present structure in 1245. The work was carried on slowly by succeeding princes, and can hardly be said to have been finished before the time of Sir Christopher Wren, who built the two towers at the west end. It is 360 feet in length within the walls; at the nave it is 72 broad, and at the cross 195. The chapel of Henry VII. adjoining, Leland calls "The Wonder of the World." St. Stephen's, Walbrook, is a small church of exquisite beauty, the masterpiece of Sir Christopher Wren; perhaps Italy itself can produce no modern building that can vie with this in taste and proportion. Bow church, in Cheapside; St. Bride's, in Fleet-street; St. Dunstan's, in the East; and St. Martin's, in the fields; are, among the other churches, most distinguished for fine architecture. The parishes, in what are called the Bills of Mortality, amount to 146, namely, 97 within the walls, 6 without the walls, 23 out-parishes in Middlesex and Surry, and 10 in the city and liberties of Westminster. With respect to palaces, the magnificence of royalty is not to be found in them. That of St. James's was an hospital for leprous females dedicated to that saint. It was surrendered to Henry VIII. who erected on its site the present palace; of which it has been observed, that notwithstanding its mean exterior, it is the most commodious for the parade of royalty of any in Europe. He likewise laid out a large piece of ground adjoining into a park, and formed a canal and walks; calling it, in conformity to the name of the palace, St. James's Park. Charles II. enlarged and improved this spot, adorning it with plantations of trees; but, a few years ago, it was improved in a still more beautiful degree. The Queen's Palace stands in the most favourable situation that St. James's Park could furnish. It was erected by the duke of Buckingham, in 1703, and called Buckingham House, until it was purchased, in 1761, for the royal residence; at which time it acquired its present name. In 1775, parliament settled this house upon the queen, in case she should survive the king. Carlton House, the residence of the Prince of Wales, the gardens extending to St. James's Park, is a stately building, on which vast sums have been expended: but it is not yet completed. The banqueting house, at Whitehall, was begun in 1619, from a design by Inigo Jones. It is only a small part of the vast plan of a palace, intended for the residence of the British monarchs, but left incomplete. Beside the royal palaces, there are many fine houses of the princes of the blood, and of the nobility and gentry. Westminster Hall, and some buildings appendant to it, contain the Houses of Lords and Commons, and the superior courts of justice. The great hall, in which are held the trials of peers, and of persons impeached before the lords, exceeds, in dimension, any in Europe, which is not supported by pillars. Its length is 270 feet, the breadth 74, and the height in proportion. The Guildhall of the city, situated at the end of King-street, Cheapside, was built in 1431. Its great hall is 153 feet long, 50 broad, and 58 high. The front of this hall has been rebuilt in the Gothic style. Here the courts of King's Bench and Common Pleas hold sittings at Nisi Prius: here also the city elections are held, and all the business of the corporation transacted. The Sessions House in the Old Bailey, in which the criminals of both London and Middlesex are tried; and the County Hall for Middlesex, on Clerkenwell Green, are noble structures. Of the buildings appropriated to the great national offices, military, naval, and fiscal, the most antient is the Tower of London. It is surrounded by a wall and ditch, which also inclose several streets. The circumference is about a mile. It was a palace during 500 years; the monarchs, on their accession to the throne, constantly holding their courts in this fortress: but after the accession of Queen Elizabeth, this custom ceased. The Horse Guards, an elegant structure, stands opposite the Banqueting House. The War Office is in this place, and here courts-martial for the army are held. The Ordnance Office, for the military department, is in St. Margaret's street, Westminster. The Admiralty is a large structure, in which the higher departments of the business of the navy is transacted, and the lords of the admiralty have houses. The Navy, Navy Pay, and Victualling Offices, are in Somerset Place, a stupendous and magnificent structure, built on the site of the old palace, erected by the first duke of Somerset, in the reign of Edward VI. It was begun during the American war, and was intended to bring into one spot the most considerable public offices; and, although not yet finished, it already contains, beside the offices abovementioned, the following, namely, the auditors of imprest, clerk of the estreats, duchy courts of Lancaster and Cornwall, hackney coach, hawkers and pedlars, horse duty, lord treasurer's, remembrancer's, lottery, pipe and comptroller of the pipe, salt, sick and hurt, signet, stage-coach duty, stamp, surveyor of crown lands, tax, and wine licence offices. The king's barge houses are comprehended in the plan, with a dwelling for the barge master; beside houses for the treasurer, paymaster, and 6 commissioners of the navy; 3 commissioners of the victualling and their secretary; 1 commissioner of the stamps, and 1 of the sick and hurt; with commodious apartments in every office for a secretary, or some other acting officer, for a porter, and their families. In the front, toward the Strand, which consists of a rich basement, supporting an excellent example of the Corinthian order, and containing a principal and attic story, are apartments for the Royal Academy, and the Royal and Antiquarian Societies. The grand entrance, by 3 lofty arches, leads into a spacious quadrangle, on each side of which, to the east and west, a street is to be formed, beyond which the wings are to be carried. The front to the Thames is erected on a noble terrace, 53 feet wide; and the building, when finished, will extend 1100 feet. This terrace, unparalleled for grandeur and beauty of view, is supported on a rough rustic basement, adorned with a lofty arcade of 32 arches, each 12 feet wide, and 24 high. The grand semicircular arch, in the middle of the basement, is that intended for the reception of the king's barges. The Treasury, which has a noble, elevated front, is in St. James's Park; and what is called "The Cockpit," forms a part of this building, and is now the council chamber for the cabinet ministers. In the city is the Royal Exchange, originally built in 1567, by Sir Thomas Gresham. Being destroyed by the great fire in 1666, it was rebuilt in its present form, at the expence of 80,000*l*. In each of the principal fronts is a piazza, and in the centre an area. The height of the building is 56 feet, and from the centre of the south side rises a lantern and turret 178 feet high, on the top of which is a vane, in the form of a grasshopper, the crest of Sir Thomas Gresham. The inside of the area, which is 144 feet long and 127 broad, is surrounded by piazzas. The Bank of England, a magnificent building, is situated in Threadneedle-street. The Custom House, to the west of the Tower, is a large irregular pile, before which ships of 350 tons can lie, and discharge their cargoes. It was built in 1718, on the site of a former Custom House, destroyed by fire. The excise Office, in Broad-street, is a building of magnificent simplicity, erected in 1768, on the site of Gresham college. The East India House, in Leadenhall-street, was built in 1726. The original front was very confined; but a new front, much enlarged and improved, has been lately erected, richly furnished in respect to exterior decorations, architectural ornaments, stone sculpture, &c. it has great extent in depth, and contains all the offices necessary for the transacting the business of a commercial company. The South Sea House, in Threadneedle street, is a handsome building; but the General Post Office, in Lombard street, is rather convenient than splendid. Of the structures, which more particularly belong to the city, the most distinguished is the Mansion House, erected, in 1752, for the residence of the lord mayor: it is magnificent, but ponderous. The Monument is a grand

fluted Doric column, 202 feet high, erected in commemoration of the great fire in 1666. The bridges are a great ornament to the metropolis. The most antient, London bridge, was begun in 1176, and finished in 1209. The length of it is 915 feet. The number of arches was 19, of unequal dimensions, and deformed by the enormous sterlings, and by houses on each side, which overhung in a terrific manner. These were removed in 1756, when the upper part of the bridge assumed a modern appearance: but the sterlings remain, though they so contract the space between the piers, as to occasion, at the ebb of tide, a fall of five feet, or a number of temporary cataracts, which have occasioned the loss of many lives. Westminster bridge, one of the finest in the world, was built by Labelye, a native of Swisserland. The first stone was laid in 1739, the last in 1747; but on account of the sinking of one of the piers, the opening of the bridge was retarded till 1750. The whole is of Portland stone, except the spandrels of the arches, which are of Purbeck. It is 1223 feet in length. It has 13 large, and 2 small semicircular arches: the centre arch is 76 feet wide; the other arches on each side decreasing in width 4 feet. Blackfriars bridge, built by Mr. Mylne, was begun in 1760, and completed in 1768. Its length is 995 feet; the breadth of the carriage-way 28, and of the foot-paths 7 each. It consists of 9 elliptical arches, the centre one of which is 100 feet wide; and both this, and the arch on each side, are wider than the celebrated Rialto at Venice; but its decay is already too visible. This noble structure is built of Portland stone. In London are several museums. The British Museum, which is open to the public gratis, was founded by parliament in 1753, in pursuance of the will of Sir Hans Sloane, who directed his executors to make an offer to the public of his collection of natural and artificial curiosities and books, for the sum of 20,000*£*. and the noble building called Montague House, was purchased for their reception. At the same time were purchased the MSS. collected by Edward Harley, earl of Oxford. Here are likewise the collections made by Robert and John Cotton; and large sums have since been voted to augment this noble repository. George II. presented to it the libraries of the kings of England from the reign of Henry VII. His present majesty gave it an interesting collection of tracts published in the reigns of Charles I. and II. and a variety of antiquities, brought from Italy, were purchased by parliament, for 8410*£*. in 1762. Another museum, consisting of anatomical preparations, and natural curiosities, collected by the late Dr. William Hunter, who built a spacious edifice for their reception, in Windmill-street, Haymarket, is now open to the public, and is to continue so for 30 years from the time of his death in 1783. Also, Week's Museum, Titchborne-street, Haymarket, for curiosities in mechanism: besides several others of inferior note. Of the inns of court, or societies for the study of the law, the principal are the Middle and Inner Temples, Lincoln's Inn, and Gray's Inn. These are very spacious, and have large gardens, which are open to the public. The others are Clifford's Inn, Clement's Inn, Serjeant's Inn, New Inn, Lyon's Inn, Barnard's Inn, Furnival's Inn, and Staple's Inn. The College of Physicians, unfortunately hidden in Warwick-lane, was built by Sir Christopher Wren. Sion college, near London Wall, founded in 1603, by the Rev. Thomas White, is governed by a president, 2 deans, and 4 assistants; and all the clergy within the Bills of Mortality are its fellows. Here is a library for their use, and almshouses for 10 men and 10 women. The Society for the encouragement of Arts, Manufactures, and Commerce, have a handsome house in the Adelphi. Of public seminaries, the most distinguished are Westminster School, St. Paul's School, the Charter House, and Merchant Taylor's School. The places of Diversion are numerous and magnificent. Of the halls of the city companies, the most distinguished in point of architecture are, Surgeon's Hall, in the Old Bailey; Goldsmith's Hall, Foster-Lane; Ironmonger's Hall, Fenchurch-street; and Fishmonger's Hall, near London bridge. The principal hospitals are Christ's Hospital, near Newgate-street, a royal foundation, for orphans and poor children: St. Bartholomew's Hospital, West Smithfield, another royal foundation for the sick and lame: Bridewell, in Blackfriars, once a royal palace, but now a royal hospital, for the apprenticing of the industrious youth, and a prison for the dissolute; Bethlem, in Moorfields, another royal hospital, for lunatics; St. Luke's, in Old Street, also for lunatics; St. Thomas's in the Borough, the fourth royal hospital, for the sick and lame; and for the same purpose are Guy's Hospital, adjoining; the London Hospital, in Whitechapel-road; the Middlesex Hospital, Berner's-street; the Westminster Infirmary, Petty France; and St. George's Hospital, Hyde Park Corne. The Foundling Hospital, in Lamb's Conduit Fields; the Asylum, at Lambeth, for orphan girls; the Magdalen Hospital in St. George's Fields, for penitent prostitutes; the Marine Society, in Bishopsgate-street; the Smallpox Hospitals at Pancrass; the Lock Hospital near Grosvenor Place; the Westminster Lying-in Hospital, and many others for the same purpose, are also excellent institutions; and there are many dispensaries for dispensing medicines to the sick, who keep to their houses, under the direction of a physician to each dispensary, and proper assistants. The prisons are numerous: the principal are, Newgate, a stupendous structure; the New Compter, Giltspur-Street; the Fleet Prison, for debtors; the King's Bench, in St. George's Fields, for the same purpose; and a new county gaol (including a new sessions house) in Southwark. Some of the squares and streets in the metropolis are magnificent; and many of those which cannot boast of grandeur are long, spacious, and airy. Portland Place, forms, perhaps, the most magnificent street in the world; Stratford Place is truly elegant; and the Adelphi Terrace is the admiration of foreigners, for the noble view which it affords of the river, the bridges, and other public buildings, and of the fine hills beyond Lambeth and Southwark. The broad stream of the Thames flowing between London and Southwark, continually agitated by a brisk current or a rapid tide, brings constant supplies of fresh air, which no buildings can intercept. The country round, especially on the London side, is neatly open to some distance; whence, by the action of the sun and wind on a gravelly soil, it is kept tolerably dry in all seasons, and affords no lodgment for stagnant air or water. The cleanliness of London, as well as its supply of water, are greatly aided by its situation on the banks of the Thames; and the New River, with many good springs within the city itself, further contributes to the abundance of that necessary element. All these are advantages with respect to health, in which this metropolis is exceeded by few. Its situation, with regard to the circumstance of navigation, is equally well chosen; had it been placed lower on the Thames, it would have been annoyed by the marshes, and more liable to the insults of foreign foes: had it been higher, it would not have been accessible, as at present, to ships of large burden. It now possesses every advantage that can be derived from a sea-port, without its dangers, and, at the same time, by means of its noble river, enjoys a very extensive communication with the internal parts of the country, which supply it with necessaries, and, in return, receive from it such commodities as they require. With the great article of fuel, London is plentifully supplied by sea from the northern collieries. Corn and various other articles are with equal ease conveyed to it from all the maritime parts of the kingdom, and great numbers of coasting vessels are continually employed for this purpose. London, therefore, unites in itself all the benefits arising from navigation and commerce, with those of a metropolis at which all the public business of a great nation is transacted; and is, at the same time, the mercantile and political head of these kingdoms. It is also the seat of many considerable manufactures; some almost peculiar to itself, as ministering to the demands of studied splendour and refined luxury; others in which it participates with the manufacturing towns in general; with

this difference, that only the finer and more costly of their works are performed here. The most important of its peculiar manufactures is the silk weaving, established in Spitalfields by refugees from France. A variety of works in gold, silver, and jewellery; the engraving of prints; the making of optical and mathematical instruments, are likewise principally or solely executed here, and some of them in greater perfection than in any other country. The porter brewery, a business of very great extent, is also chiefly carried on in London. To its port are likewise confined some branches of foreign commerce, as the vast East India Trade, and those to Turkey and Hudson's Bay. Thus London has risen to its present rank of the first city in Europe with respect to opulence; and nearly, if not entirely so, as to number of its inhabitants. It is probable, that the residents in London, Westminster, Southwark, and all the outparishes, do not fall short of 1,000,000. London is a bishop's see, and sends 4 members to parliament. To enumerate all the events by which this great capital has been distinguished would greatly exceed our limits; we shall only mention, therefore, the great plague in 1665, which cut off 90,000 people, and the dreadful conflagration in 1666, by which 13,000 houses were destroyed. Lat. 51. 31. N. lon. (St. Paul's) 0. 5, four-sixtieths W. from Greenwich.

They appeared thickly covered with wood, among which the cocoa-nut was very distinguishable. The natives were of a dark copper colour; their hair tied in a knot on the back of the head; and they seemed to have some method of taking off the beard, for they appeared as if clean shaved. They had an ornament, consisting of a number of fringes, like an artificial beard, which they fasten between the nose and mouth, and close under the nose. To that beard hung a row of teeth, which gave them the appearance of having a mouth lower than their natural one. They wore a wrapper round their middle. Lat. 5. 30. S. lon. from 159. 14. to 159. 37. LORETTO, a town of Italy, in the marquisate of Ancona. They pretend to shew here the Santa Casa, or house of Nazareth, in which Jesus was brought up; and say, that it was carried by angels into Dalmatia, and thence to the place where it now stands. This house is nearly 32 feet long, 13 wide, and 18 feet 9 inches in height, incrusted with marble, with inside walls of brick, and some pieces of stone intermixed. The inner part, or chapel, is very old, but it is surrounded by a marble wall, and within is a church built of freestone. A statue, to represent Mary, the mother of Jesus, with the image of Christ, covered with diamonds, in her arms, stands upon the principal altar: it is of cedar-wood, 3 feet high, but the face can hardly be seen, on account of the smoke of the numerous lamps around it. She is clothed

with cloth of gold, set off with jewels, with a triple crown on the head, and the infant is covered with a shirt, holding a globe in its hand, adorned with rich jewels. The sanctuary is perfectly crowded with 62 great lamps of gold and silver; one of the golden ones, which was presented by the Republic of Venice, weighs 37 pounds: there are also angels waiting about the holy image, one of massive gold, and two of silver; and the walls are covered with plates of silver. Christiana, queen of Sweden, gave a crown of gold, worth above 100,000 crowns; and Isabella, infanta of Spain, sent a garment which cost 40,000 ducats. Lewis XIII. of France, and his queen, sent two crowns of gold, enriched with diamonds. Besides these crowns, they sent an angel of massy silver, holding in its hand the figure of the dauphin, of solid gold. The jewels of the Holy House, however, are nothing in comparison with the treasure, where the number, variety, and richness of the vestments, lamps, candlesticks, goblets, crowns, crucifixes, images, cameos, pearls, gems of all kinds, &c. is prodigious. As for the town itself, exclusive of the chapel, it is neither very considerable nor very agreeable, nor does it contain above 300 inhabitants, who are almost all shoemakers, tailors, or sellers of chaplets. Loretto is seated on a mountain, about 3 miles from the Adriatic, 10 S. E. of Ancona, and 112 N. E. of Rome. Lat. 43. 27. N. lon. 13. 40. E.

and more than half a mile in breadth, from N. W. to S. E. Its entrance is not above 1800 feet wide, and is formed by 2 small islands. In the N. E. part is a fine careening wharf, to heave down, very secure from all winds. On the opposite side are the fishing stages, with room for 2000 boats to cure their fish; the cod being remarkably plentiful here, and, at the same time, better than any about Newfoundland. The fishery may, in general, be continued from April to the close of December, when the harbour becomes impracticable, being entirely frozen, so as to be walked over. The town is about half an English mile in length, and 2 in circuit, built for the most part of stone, and laid out in broad and regular streets. At a little distance from the fort, or citadel, is a large parade, the inside of which is a fine square, near 200 feet every way. This island was taken by Admiral Boscawen and Lieutenant-general Amherst, June 27, 1758, and its fortifications since demolished. Lat. 45. 54. N. lon. 59. 51. W.

America, now one of the United States, situated on both sides of the Mississippi, and bounded on the E. by Florida, on the S. by the Gulf of Mexico, on the W. by New Mexico, and on the N. by Indian nations. It is agreeably situated between the extremes of heat and cold; its climate varying as it extends towards the N. The southern parts, lying within the reach of the refreshing breezes from the sea, are not scorched like those under the same latitude in Africa; and its northern regions are colder than those in Europe under the same parallels, with a wholesome serene air. From the favourableness of the climate, two annual crops of Indian corn, as well as rice, may be produced; and the soil, with little cultivation, would furnish grain of every kind in the greatest abundance. The timber is as fine as any in the world; and the quantities of live oak, ash, mulberry, walnut, cherry, cypress, and cedar, are astonishing. The neighbourhood of the Mississippi, besides, furnishes the richest fruits in great variety; the soil is particularly adapted for hemp, flax, and tobacco; and indigo is at this time a staple commodity, which commonly yields the planter three or four cuttings a year. Whatever is rich and rare in the most desirable climates in Europe seems to be the spontaneous production of this delightful country. It is intersected by a number of fine rivers, among which are the Natchitoches, and the Adayes, or Mexicano.

The louse affords to the microscopic observer of the works of creation a very delicate and beautiful structure of parts. In the head appear two fine black eyes with a horn that has five joints, and is surrounded with hairs standing before each eye; and from the end of the nose there is a pointed projecting part, which serves as a sheath to a pieeer which is judged to be 700 times smaller than a hair and by which alone it receives its nourishment. It has six legs each having five joints and being terminated by two hooked claws. See the Plate. This name is likewise applied to animals that resemble the former; hence we make use of the words *book-lice*, *wood-lice*, &c.

They formerly made large quantities of cloth here, insomuch that this city contained at one time, 150,000 clothiers; but at present their trade is generally decayed, and the place is chiefly remarkable for its good beer, with which it serves the neighbouring towns. In its castle, built originally by the Emperor Arnulph, to defend the country against the Normans, and called at first Loven, and afterwards Cæsar's Castle, the emperor, Charles V. and his sisters were brought up to the year 1510; and formerly the assembly of the states was held there. LU'BECK, a celebrated sea port of Holstein, in Lower Saxony. It is a free imperial city, and was long the head of the famous Hanseatic League, which was formed here in 1164. It was likewise the most commercial city and powerful republic of the North. Its fleet set the northern powers at defiance, and rode triumphant in the Baltic. But Lubeck retains scarcely a shadow of its former power. The houses of Lubeck are built all of stone, in a very antient style of architecture; the doors being so large as to admit carriages into the hall, which frequently serves for a coach house. The walls of many houses bear the date of the 15th century, and, at that period, no doubt, the town was esteemed very beautiful. The streets are, for the most part, steep, as the city stands on the two sides of a long hill, the eastern part extending towards the Wackenitz, as the Western does towards the Trave. Here are 4 parochial churches, besides the cathedral. The town-house is a superb structure, and has several towers. In it is a large hall called *Haansesaal*, where the deputies of the Hans towns used formerly to meet. Here is also a fine exchange, built in the year 1683. The inhabitants are all Lutherans, and there are 21 preachers, whose chief has the title of Superintendant. Here were formerly 4 convents: and in that of St. John there are still 22 Protestant girls, under the government of an abbess. That of St. Mary Magdalen is turned into an hospital; that of St. Anne is made a house of correction; and of the monastery of St. Catharine, they have made a handsome college. In the great hospital there is always a considerable number of poor men and women. Beside this, there are 14 other hospitals, 1 for lunatics, a pest house, and 4 others for sick persons. Lubeck is seated at the confluence of the rivers Trave, (which is the largest;) the Steckenitz, another navigable stream, by which it communicates with the Elbe; and the Wackenitz, which issues from the lake of Ratzeburgh, and, after joining the Sewartau, falls into the Baltic; by means of which several streams, long and flat bottomed vessels pass from the Baltic into the German Ocean, 14 miles S. W. of the Baltic, and 40 N. E. of Hamburgh. Travemunde is the port of Lubeck to which it belongs, and is 12 miles N. N. E. of that city. In 1789, 951 ships sailed from this port. Lat. 53. 52. The soil is fertile, but unequal; the southern parts are mountainous, but without glaciers; and there is a very considerable exportation of cheese. The sovereign power of this republic resides in the council of 100, comprising the senate, or little council. The former is the nominal sovereign; but the power resides in the latter, consisting of 36 persons, who are formed into two divisions, which exercise the office by rotation. Although the government appears purely aristocratic, yet this aristocracy is restrained in divers respects; as in the matter of making war or peace, concluding new alliances, acquiring new territories, or imposing new taxes, the consent of all the citizens must be obtained. The chiefs of the republic are two magistrates called advoyers.

It is provided with several good bays and commodious harbours, the chief of which, called the *Little Careenage*, is reckoned the best in all the Caribbee Islands. In it are two remarkably round and high mountains, said to be volcanoes, by which this island may be known at a considerable distance. It was long considered as neutral by the English and French, till it was ceded to France by the peace of 1763. In 1777, it was taken by the English, but restored to the French by the peace of 1783. This island was taken by the English in the late war, (also in the present, soon after its commencement,) and still remains in their possession; it is about 70 miles N. N. W. of Barbadoes, and 38 S. LUKE, St. (one of the four Evangelists) a native, as is generally supposed, of Antioch, the metropolis of Syria, a place renowned for this one peculiar honour, that the disciples of Jesus were here first called Christians. He was by profession, as appears from the mention made of him by St. Paul, a physician; and some will have him also to have been eminent for painting; but of this we have no accounts that can be depended upon. He became afterwards an inseparable companion and fellow-labourer of the Apostle of the Gentiles in the ministry; attending him in all his travels, accompanying him in his dangerous voyage to Rome and ministering to him in his necessities. There are different accounts concerning the countries where St. Luke afterwards preached the gospel; some say, that leaving St. Paul at Rome, he returned back into the East, and travelled through great part of it, preaching the gospel in Egypt, and the parts of Lybia, where he converted many to Christianity; but others think he did not wholly leave St. Paul till the latter had finished his course by martyrdom. Some again say, that he first preached the gospel in Dalmatia and Galatia, then in Italy and Macedonia, and that with great diligence and success. The antients are not at all agreed either concerning the time, or place, or manner of his death; of all which such various accounts are given, that it would be tedious here to insert them. He is universally acknowledged to have been the author of the Gospel that goes under his name, and of the book of the Acts of the Apostles, both which he dedicates to Theophilus, whom some writers suppose to have been a person of some eminence, probably at Antioch, converted by St. Luke.

LYNN REGIS, or KING'S LYNN, a populous and flourishing town of Norfolk. The situation of this town, near the fall of the Ouse into the sea, after having received several other rivers, of which some are navigable, gives it an opportunity of extending its trade into eight different counties, by which many considerable cities and towns, viz. Peterborough, Ely, Stamford, Bedford, St. Ives, Huntingdon, St. Neot's, Northampton, Cambridge, St. Edmundsbury, and the N. part of Bucks, as well as the inland parts of Norfolk and Suffolk, are supplied with heavy goods, not only of home produce, as coals and salt from Newcastle, but also of merchandise imported from abroad, especially wine, of which two articles, viz. coals and wine, this is the greatest port for importation of any place on all the eastern coast of England, and those wherein the Lynn merchants deal more largely than any town in England, except London, Bristol, and Newcastle. In return for this, Lynn receives back all the corn which the counties just mentioned produce, for exportation; and therefore sends more of it abroad than any port, except Hull. The foreign trade of the merchants here is very considerable, especially to Holland, Norway, and the Baltic, and also to Spain and Portugal, and formerly they drove a good trade to France, till it was turned off, by treaties on one hand, and prohibitions, high duties, &c. on the other, to Spain and Portugal. The harbour is safe when ships are in it, but difficult to enter, by reason of the many flats and shoals in the passage: but they are well buoyed, and good pilots are always ready. Its air is unwholesome on account of its vicinity to the fens. The streets are narrow, but well paved, and it has a good market-place, and a noble old town-house and exchange. LYONNOIS, a ci devant province of France, W. of the rivers Saone and Loire, about 30 miles in length, and 17 in breadth. It now forms, including the districts of Beaujeloix and Forez, the department of the Rhone and Loire. Lyons is the capital.

LYONS, a large, antient, and famous city, in the department of Rhone and Loire, the most considerable in the empire, next to paris, for beauty, commerce, and opulence, and is seated at the confluence of the rivers Rhone and Saone, by the side of two high mountains. It was founded about the year 42 B. C. by the Romans, who made it the centre of the commerce of the Gauls. About the year 145, it was totally destroyed by fire, but was rebuilt by the munificence of Nero. Many antiquities are still observed, that evince its Roman origin. Lyons was the see of an archbishop, and, before the revolution, contained about 160,000 inhabitants, upwards of 30,000 of whom were employed in various manufactures, particularly of rich stuffs of the most exquisite workmanship, in silk, gold, silver, &c. The houses in general are high and well built; it has 6 gates and 4 suburbs, and had 4 abbeys, 50 convents, 3 public schools, a college of physic, an academy of arts and sciences and belles lettres, a society of agriculture, and a veterinary school. Such was Lyons before the fatal year 1793, when the mischiefs of the revolution were poured upon this devoted city in all their horrors. In June 1793, the Lyonese revolted against the national convention, and sustained, with great bravery, an active siege of two months. But the inhabitants, who were both unused to arms, and very ill provided with the means of defence, as well as the necessaries of life, were obliged to surrender on the 8th of October following. In the siege a great part of the city was reduced to ashes by an incessant bombardment; and, when taken, it became a prey to the merciless victors, who satiated their rage by barbarities for which language has no name. The miserable victims, who were too numerous for the individual operation of a guillotine, were driven in great numbers, with the most savage and blasphemous ceremonies, into the Rhone, or hurried in crowds to the squares to be massacred by the more painful operation of fire-arms and artillery. It is supposed that not less than 70,000 persons in this unfortunate city alone were either put to death, or forced into exile. Lyons is a place of very great trade, which is extended not only through France, but to Italy, Swisserland, and Spain; and there are four celebrated fairs every year. It derives vast advantages from the rivers it stands upon, and is 70 miles S. by W. of Geneva, and 220 S. E. of Paris. Lat. 45. 46. N. lon. 4. 55. E.

M.

M IS the 12th letter, and 9th consonant, of the English alphabet; it is pronounced by striking both lips together, whereby the breath is intercepted, and strongly forced through the mouth and nostrils jointly. It is one of those consonants called liquids, or half-vowels, and in English words never loses its sound. In the beginning of words it admits no consonant after it, except in some Greek originals, nor does it follow any in that case. In some words, the sound of *n* after it is lost, as in *autumn, solemn, condemn*, &c. As a numeral it stands for 1000, and with a dash over it, thus, $\bar{M}$, for a thousand thousand, or a million. In contractions of words we find it thus, M. A. *magister artium*, master of arts; MSS. manuscripts. In physical prescriptions, it signifies *manipulus*, a handful; and at the end of a recipe, it means *misce*, mix or mingle.

Their hair is long and curled, at least on the coasts; and there are some likewise of a yellowish complexion, who have neater features than the rest. The island is uneven and hilly, but the face of the country is one of the most agreeable in the world. It is extremely populous; yet they have no cities or towns, but a great number of villages, a small distance from each other. Their houses are huts, with doors so low, that a boy of 12 years old cannot enter them without stooping. They have neither windows nor chimneys, and the roofs are covered with reeds or leaves. Their furniture consist of a few baskets, to put their necessaries in, and they can change their habitations when they please. There are a great many petty kings, whose riches consist in cattle and slaves, and they are often at war with each other. Great quantities of iron and steel are found throughout the island; as also three sorts of gold. The rivers and brooks are rich in various kinds of precious stones. The productions of the island are, the *raven*, a kind of palm-tree known only in Madagascar, the top of which is prepared and eaten like the cabbage palm, and of the ribs of its leaves they form the walls of their houses; rice, barley, sugar-canes, white pepper, ginger, cocoa nuts, grapes, saffron, several kinds of gums, five different kinds of honey, and a variety of plants unknown to Europeans. Buffaloes run in herds, and there are great numbers of sheep, whose mutton is finely tasted, as well as goats, kids, and other kinds of useful quadruped animals, but neither elephants, tigers, lions, nor horses. Large crocodiles, monkeys wild boars, cameleons, lizards, locusts, insects, birds, and fish, are numerous. The chief employment of the inhabitants is in building, in gold and iron works, making of earthenware, spinning, weaving, cordage, fishing, hunting, and mostly in agriculture. The language has a great affinity with the Arabic, the Arabs having made a conquest of the island about 300 years ago. The French have frequently attempted to settle here, but have always been driven hence. Lat. from 12. 0. to 25. 30. S. lon. from 44. 30. to 50. 30. E.

MADEFA'CTION, *s.* [from *madeo*, to be moist and *facio*, to make, Lat.] the act of making wet.

MADE'IRA, an island of the Atlantic Ocean, principal of a group called the Madeiras, and subject to the Portuguese. The climate is more temperate than in the Canaries, and the soil more fertile in wine, sugar, fruits, &c. but less so in corn, though infinitely better watered with springs and rivers. Spring and autumn reign here together, and produce flowers and fruit throughout the year. It abounds in every kind of tropical and European fruits; as oranges of all sorts and dimensions, lemons of a prodigious size, bananas, citrons, peaches, nectarines, apricots, figs, plums, melons, apples, and strawberries, that grow wild in the mountains with astonishing profusion; grapes which are as large as our common plums, and remarkable for their peculiar flavour. The oranges are of a sanguine red; this species is produced from the common orange-bud, ingrafted on the pomegranate stock. There is likewise a kind of pear found here, not bigger than a walnut, and very crisp. The sugar-cane also is cultivated with success, though not in any considerable quantity. The cedar-tree is found in great abundance: it is extremely beautiful; most of the ceilings and furniture at Madeira are made of that wood, which yields a very fragrant smell. The dragon-tree is a native of this island, as are also mastic and other gums. Flowers nursed in the English greenhouses grow wild here in the fields; the hedges are mostly formed of myrtles, roses, jessamine, and honeysuckle, in everlasting blossom, while the larkspur, the fleur-de-lys, the lupine, &c. spring up spontaneously in the meadows. There are very few reptiles to be seen in the island; the lizard is the most common. Canary-birds and goldfinches are found in the mountains; of the former, numbers are sent every year to England. But Madeira is principally celebrated for its excellent wine, which, moreover, keeps best in the hottest climate under the torrid zone. For this reason the inhabitants of the West India Islands, that can afford it, drink little else; and the Madeira wine that is brought to England is thought to be worth little, unless it has first made a voyage to the E. or W. Indies. These wines are of different kinds, differing both in taste, colour, and strength. The exports of this article, and the profits on it, are immense, and bring a large revenue to the king of Portugal. In Madeira are made the finest sweetmeats in the world; all kinds of fruits being here candied in the most exquisite perfection. Madeira is well watered and peopled; the inhabitants are good-natured, sober, frugal, and indolent. Funchal is the capital of this island, which is about 150 miles in circumference, and lies in 16 deg. W. lon. and 33 deg. N. lat.

MADRA'S, or FORT ST. GEORGE, called by the natives CHINA-PATAM, a fort and town of the peninsula of Hindoostan, on the coast of Coromandel, built in the reign of Charles II. by order of the English East India Company, under the superintendence of Sir William Langhorn; some writers, however, assert, that it was first settled in 1640, and afterwards enlarged in the reign of Charles II. It is the principal settlement of the English on the E. side of the peninsula, and is a fortress of very great extent, including,

within it a regular well-built city. It is close on the margin of the sea, from which it has a rich and beautiful appearance; the houses being covered with a stucco called chunam, which in itself is nearly as compact as the finest marble, and, as it bears as high a polish, is equally splendid with that elegant material. There is a second city, called the Black Town, nearly 4 miles in circuit, separated from Madras by the breadth of a proper esplanade only. Madras, in common with all the European settlements on this coast, has no port for shipping; the coast forming nearly a straight line: and it is incommoded also with a high and dangerous surf. The citadel here, which was planned by Mr. Robins, and is situated in the middle of the White, or English Town, is one of the best fortresses in possession of the British nation. The town is also encompassed with a strong wall, of the same stone with which the citadel is built, defended by batteries, bastions, half-moons, and flankers; the whole mounted with upwards of 200 pieces of cannon and mortars. Opposite the west gate of the citadel are barracks, and a convenient hospital for the company's soldiers; and at the other end of the barracks is a mint, where the company coin gold and silver. Madras was first settled by the English in 1640, and greatly enlarged in the reign of Charles II. It was taken by the French in 1746, but restored by the treaty of Aix la-Chapelle. Lat. 13. 5. N. lon. 80. 30. E.

MA'DRID, the capital of Spain, in New Castile, situated on the Manzanares, the banks of which, in the environs, afford an agreeable shade, coolness, and verdure. It was formerly an obscure place, belonging to the archbishop of Toledo; but the purity of the air engaged Charles V. and his successors, to chuse it for their residence. It is seated in a large plain, surrounded by high mountains, but has no wall, rampart, or ditch. The houses are all built with brick, and the streets are long, broad, and straight, and adorned at proper distances with handsome fountains. There are above 100 towers or steeples, in different places, which contribute greatly to the embellishment of the city. The royal palace is built on an eminence, at the extremity of the city. The finest square in Madrid is the Placa Mayor, which is spacious and regular, surrounded with 136 houses, five stories high, and of an equal height. Every stage is adorned with a handsome balcony, and the fronts are supported by columns, forming a piazza round the square. Here the market is held, and here they had their famous bull-fights. However, it is observable, that the very finest houses have no glass windows, they being only lattices. The Prado, which is the public airing place, is shaded with regular rows of poplar trees, and is watered with 23 fountains. Here the stately Spaniards make the most brilliant display of their finery. Philip II. built a large and magnificent bridge over the river, which river being exceedingly small, has occasioned a great many jokes. The city of Madrid contains 15 gates, 18 parishes, 35 convents of monks, and 31 of nuns; 39 colleges, hospitals, or houses of charity, 7398 dwelling-houses, and about 160,000 inhabitants. There are four academies in Madrid; the Academy of Belles Lettres; the Academy of Spanish Historical Monuments; the Academy of the Fine Arts, Painting, Sculpture, and Architecture; and the Academy of Medicine; which last is held in no great esteem. Lat. 40. 25. N. lon. 3. 32. W.

MA'DWORT, *s.* a plant with purple blossoms; called also small wild bugloss, great goosegrass, and German madwort.

MA'ELSTROM, a very extraordinary and dangerous whirlpool on the coast of Norway, in lat. 68 deg. N. Of the situation of this whirlpool we have the following account from Jonas Ramus: "The mountain of Helfeggen, in Lofoden, lies a league from the island Ver, and betwixt these two runs that large and dreadful stream, called Moskoestrum, from the island Moskoe, which is in the middle of it, together with several circumjacent isles, as Ambaaren, half a quarter of a league northward, Ilesen, Hoehofm, Kieldholm, Suarven, and Buckholm. Moskoe lies about half a quarter of a mile south of the island of Ver, and betwixt them, these small islands, Otterholm, Flimem, Sandflesen, and Stockholm. Betwixt Lofoden and Moskoe, the depth of the water is between 36 and 40 fathoms; but on the other side, toward Ver, the depth decreases so as not to afford a convenient passage for a vessel, without the risk of splitting on the rocks, which happens even in the calmest weather. When it is flood, the stream runs up the country between Lofoden and Moskoe with a boisterous rapidity; but the roar of its impetuous ebb to the sea is scarce equalled by the loudest and most dreadful cataracts, the noise being heard several leagues off, and the vortices or pits are of such extent and depth, that if a ship comes within its attraction, it is inevitably absorbed and carried down to the bottom, and there beat to pieces against the rocks; and when the water relaxes, the fragments thereof are thrown up again. But these intervals of tranquillity are only at the turn of the ebb and flood, in calm weather, and last but a quarter of an hour, its violence gradually returning. When the stream is most boisterous, and its fury heightened by a storm, it is dangerous to come within a Norway mile of it; boats, ships, and yatchts having been carried away, by not guarding against it before they were within its reach. It likewise happens frequently, that whales come too near the stream, and are overpowered by its violence, and then it is impossible to describe their howlings and bellowings, in their fruitless struggles to disengage themselves. A bear, once attempting to swim from Lofoden to Moskoe, with a design of preying upon the sheep at pasture in the island, afforded the like spectacle to the people; the stream caught him, and bore him down, while he roared terribly, so as to be heard on shore. Large stocks of firs and pine trees, after being absorbed by the current, rise again, broken and torn to such a degree as if bristles grew on them. This plainly shews the bottom to consist of craggy rocks, among which they are whirled to and fro. This stream is regulated by the flux and reflux of the sea; it being constantly high and low water every six hours. In the year 1645, early in the morning of Sexagesima Sunday, it raged with so much noise and impetuosity, that on the island of Moskoe, the very stones of the houses fell to the ground."

MA'ESTRICHT, a large, antient town of the Netherlands, formerly belonging to the duchy of Lorrain. It was afterwards united to the duchy of Brabant, although insulated in the bishopric of Liege. The town-house and other public buildings are handsome, and the place is so well defended by detached bastions, horn-works, entrenchments, numerous redoubts, ravelins, a good covered way, &c. that it is justly reckoned one of the strongest fortresses in Europe. Near it are large stone quarries, in which are subterraneous passages of great extent. It is seated on the river Maese, which separates it from Wyck, and with which it communicates by a handsome bridge, 15 miles N. of Liege, and 46 E. of Brussels. Lat. 50. 51. N. lon. 5. 46. E.

The country of Magadoxa extends from the river Juboo, near the equator, to beyond the fifth degree of N. lat. how far it extends to the westward is but little known. The inhabitants are mostly Mahometans, who came and settled here in the time of the caliphs. Mixed with them are the Bedwin Arabs, who still follow their old pagan superstitions, and a still greater number of Abyssinian Christians. All speak the Arabic tongue

The inhabitants are warlike, and use poisoned arrows and lances. The city of Magadoxa is a place of great commerce, foreign merchants from Aden, and other parts, exchanging cotton, silk, cloth, spices, drugs, &c. for gold, ivory, wax, and other commodities. Lat. 2. 30. N. lon. 44. 0. E.

The cathedral square is ornamented with large elegant houses, and its area is well paved. Here are different manufactories of cotton and linen goods, stockings, hats, beautiful leather gloves, tobacco and snuff; but the principal are those of woollen and silk. It is happily situated for trade, having an easy communication with Hamburgh by the Elbe, and lying on the road between Upper and Lower Germany. It was taken by storm, in 1631, by the imperial general Tilly, who burnt the town and massacred the inhabitants, of whom only 800 escaped out of 40,000; and many young women plunged into the Elbe to escape violation. It is strongly fortified, having, among other works, a citadel seated on an island in the river Elbe, and is 52 miles W. S. W. of Potsdam. Lat. 52. 11. N. lon. 11. 45. E.

MAGE'LLAN, a famous strait of South America, discovered in 1520 by Ferdinando Magellan, a Portuguese in the service of Spain. It has many safe harbours in it, with narrow entrances, and vast large bays, sheltered so closely on all sides by high mountains, that ships may ride safely in them without the least anchor. The Spaniards call the country to the N. of the Strait, Terra Magellanica, and reckon it part of Chili. They had a fort and garrison upon this strait, but the men all perished through cold and want of provisions.

The western state, the capital of which is Poonah, is divided among a number of chiefs, or princes, whose obedience to the paishwa, or head, like that of the German princes to the emperor, is merely nominal at any time ; and, in some cases, an opposition of interests begets wars, not only between the members of the empire themselves, but also between the members and the head. Nagpour is the capital of the Eastern Mahrattas. The air, which is sharp and cold in winter, is healthy, and the inhabitants live to a very great age. The commodities of this island are black cattle, wool, fine and coarse linen, hides, skins, honey, tallow, and herrings. The frosts here are short, and the snow, especially in lands near the sea, lies not long on the ground. Their cattle and horses are small, and they have badgers, foxes, eagles, and mottled hawks. Here are several quarries of stone and thin blue slate, and some mines of lead, copper, and iron. Thin oat cakes are the common bread of the inhabitants. About the rocks of the island breed an incredible number of all sorts of sea-fowl, and especially on the Calf of Man, an island 3 miles in circuit, before the S. promontory of Man, and separated from it by a channel 2 furlongs broad. He was formerly reckoned a baron, but does not sit in the house of peers, although he is allowed the highest seat in the lower house of convocation. The language is a dialect of the Erse. In its civil government, the island is divided into six sheedings, each having its proper coroner, who is intrusted with the peace of his district, and acts in the nature of a sheriff.

MA'NCHESTER, (anciently a Roman station called *Mancunium*) a large, populous, manufacturing town of Lancashire, containing about 13,000 houses, and 84,000 inhabitants. Manchester has been the scene of some remarkable events; in the disputes between Charles I. and his parliament, this town, taking sides with the latter, was besieged by the earl of Derby, with 4000 foot, and 300 horse, having 7 pieces of cannon; however, such was the defence of the town, that the earl was compelled to raise the siege, with considerable loss. It is a place of great antiquity, and in the time of Camden, was famous for its population, market, and manufactures of stuffs; but it is now principally conspicuous, as the centre of the cotton trade, an immense business, extending, in some or other of its operations, from Furness (where great cotton spinning-mills have been established,) to Derby north and south, and from Halifax to Liverpool, east and west. The labours of a very populous neighbourhood are collected at Manchester, whence they are sent to London, Liverpool, Hull, &c. These consist of a great variety of cotton, silk, linen, and mixed goods, fitted for every market, both at home and abroad, and spreading over a great part of Europe, America, and the coast of Guinea, and bringing back vast profits to the country. To such perfection has the machinery for the spinning of cotton been brought here, that of one pound of that material 300 hanks of yarn have been spun, each hank containing 840 yards in length, making in the whole 252,000 yards, (upwards of 143 miles long!) The average number of hanks to the pound, however, is supposed to be 100, and the spindles employed in the whole town is stated to be 1,515,500, each producing on an average, 10 hanks per week, and making an annual aggregate of 377,411,164 miles, sufficient to form a piece of muslin, five quarters wide, that would encompass the planet we inhabit! The manufacture of ticking, tapes, filleting, and other small wares, of silk goods, and of hats, is also carried on at Manchester; from which various sources of wealth it has attained greater opulence than any other trading town in England. Its buildings (especially the more modern ones) are on a proportional scale of size and elegance. Its chief ornaments are, the collegiate church, a venerable pile, with a handsome tower, 8 capital bells, and a set of chimes; having a warden, four fellows, two chaplains, and two clerks:—contiguous to this is Chetham's Hospital, (commonly called the college,) for clothing, educating, and apprenticing 80 boys; to which is also attached a public library, containing 15,000 volumes:—Also the Infirmary, Dispensary, Lunatic Hospital and Asylum, Lying-in-Hospital, House of Recovery for patients afflicted with fevers, and two Poor Houses, are charities highly honourable to the town, and beneficial to their objects. Here is also a large prison called the New Bailey. This town abounds with libraries, and literary and philosophical institutions, some of which have attained considerable celebrity. Manchester is governed by a headborough, (called the boroughreeve,) and two constables chosen annually from the most respectable inhabitants, by a jury impannelled by the steward, at the Michaelmas court leet, which is held by the lord of the manor. There are here reckoned 12 churches, and several chapels, of the established religion, and a great number of chapels belonging to every denomination of dissenters. By the river Irwell, over which it has a very antient stone bridge, it has a communication with the Mersey, and all the late various extensions of inland navigation. It is situated upon the rivers Irk, Medlock, and Irwell, about 7 miles from the junction of the latter with the Mersey, and 185 N. N. W. of London. Lat 53. 26½. N. lon. 2. 10. W.

The fruit is of the colour and size of the golden pippin; many Europeans have suffered, and others lost their lives, by eating it. The leaves abound with juice of the same nature; cattle never shelter themselves, and but few vegetables grow, under their shade; yet goats eat this fruit without injury.

This, in 1738 was confirmed to them by treaty, and a distinct portion of land allowed them for their residence; but as their friendship was never sincere, a general revolt took place in 1795, which (by the help of blood-hounds!) was quelled in the following year, when 600 of them were transported to Halifax in North America.

MA'RQUESAS, a group of Islands in the South Sea, first discovered by Mendana, a Spaniard, in 1595. They are five in number, and named St. Christiana, Magdalena, Dominica, St. Pedro, and Hood. Captain Cook lay some time at the first of these, in 1774. The natives are of a tawny complexion, but look almost black, from being punctured over the whole body. They go almost naked, having only a small piece of cloth, perfectly resembling that made by the people of Otaheite, round their waist and loins. Their beard and hair are of a fine jet black, like those of the other natives of the torrid zone. The island, though high and steep, has many vallies, which widen towards the sea, and are covered with fine forests to the summits of the interior mountains. The products of these islands are bread-fruit, pananas, plantains, cocoa-nuts, scarlet beans, paper-mulberries, of the bark of which their cloth is made, causarinas, with other tropical plants and trees, and hogs and fowls. They have also plenty of fish. Captain Foster says, he never saw a single man deformed, or even ill-proportioned, among the natives; all were strong, tall, well-limbed, and active in the highest degree. Their arms were clubs and spears, and their government, like that of the Society Islands, monarchical. But they were not quite so cleanly as the inhabitants of the Society Islands, who, in that respect, surpass perhaps any other people in the world. The drink of the Marquesans is purely water, cocoa nuts being rather scarce. Their music, musical instruments, dances, and canoes, resemble those of Otaheite. Lat. 9. 55. S. lon. 139. 9. W.

MARS, *s.* in the solar system, is one of the superior planets. His distance from the sun is computed to be near 145 millions of miles, and by proceeding at the immense rate of about 55,000 miles every hour in his orbit, goes round him

in 686d. 22h. 18m. 27s. 3-tenths, which is his periodic revolution. He moves from one fixed star to the same again in 686d. 23h. 30m. 43s. 3-tenths, and from aphelion to aphelion in 686d. 23h. 57m. 57s. the former being called his sidereal, the latter his anomalistic period. His synodic revolution, or space of time between each of his conjunctions with the sun, is completed in 779d. 22h. 28m. 26s. at a mean rate. His diameter is 5340 miles, and by moving at the rate of 680 miles an hour at his equator, makes a complete turn round his axis in 24h. 39m. 22s. which is easily deducible from dark spots on his disk. His year consists of 688 15-24ths of such days. Dr. Herschel has determined the obliquity of his ecliptic to be 28° 42′, only 5° 14′ greater than the earth's; and also that his polar diameter is somewhat shorter than his equatorial, the former being to the latter as 98 to 103, or as 1272 to 1355. His solid contents is about 30-100ths of the earth's, and density 729-1000ths of the same. The place of his aphelion, anno 1800, was in 20° 24′ 14″ of Virgo, and ascending node in 18° 10′ of Taurus; the motion of the former being 1° 51′ 40″, and the latter 1° 6′ 40″, in 100 years. The inclination of his orbit to the plane of the ecliptic, or his greatest heliocentric latitude, is 1° 51′; but his greatest geocentric latitude, on account of his proximity to the earth, amounts sometimes to 4° 45′. His eccentricity is 14,208 of those parts of which the earth's distance from the sun is 100,000, and the greatest equation of his orbit 10° 41′ 47″. On account of his great eccentricity, the length of time he is retrogade in a synodic revolution varies from 59 to 83 days, the arc of retrogradation in the former case, as the planet is in perihelion, being about 10°, and in the latter about 19°. Besides those dark spots on his disk from which the time of his rotation on his axis is determined, former astronomers have taken notice of very large bright ones about both his poles; and these observations have now been confirmed by Dr. Herschel, who has likewise discovered that the centres of them are nearly in his poles, and that they cover very great portions of his polar regions. His other observations concerning these spots, and other peculiarities of this planet, are expressed in the following words: "The analogy between Mars and the earth is perhaps by far the greatest in the whole solar system. Their diurnal motion is nearly the same, the obliquity of their respective ecliptics not very different; of all the superior planets he is by far the nearest alike to that of the earth; nor will the length of the Martial year appear very different from what we enjoy, when compared to the surprising duration of the years of Jupiter, Saturn, and the Georgium Sidus. If then we find that the globe we inhabit has its polar regions frozen, and covered with mountains of ice and snow that only partly melt when alternately exposed to the sun, I may well be permitted to surmise, that the same causes may probably have the same effect on the globe of Mars; that the bright polar spots are owing to the vivid reflection of light from frozen regions; and that the reduction of those spots is to be ascribed to their being exposed to the sun. In the year 1781, the south polar spot was extremely large, which we might well expect, as that pole had but lately been involved in a whole twelvemonth's darkness and absence of the sun; but in 1783, I found it considerably smaller than before, and it decreased continually from the 20th of May, till about the middle of September, when it seemed to be at a stand. During this last period the south pole had already been above eight months enjoying the benefit of summer, and still continued to receive the sunbeams, though, towards the latter end, in such an oblique direction as to be but little benefited by them. On the other hand, in the year 1781, the north polar spot, which had then been its twelvemonth in the sunshine, and was but lately returning into darkness, appeared small, though undoubtedly increasing in size." It has probably a considerable atmosphere; for, besides the permanent spots on its surface, Dr. Herschel has often perceived occasional changes of partial bright belts, and also once a darkish one in a pretty high latitude; alterations which we can attribute to no other cause than the variable disposition of clouds and vapours floating in the atmosphere of the planet. Among chemists, it denotes iron, as supposed to be under the influence of that planet. With astrologers it is the producing cause of wars, troubles, &c. In the heathen mythology, the god of war.

It is seated on the Mediterranean, at the upper end of a gulf, covered and defended by many small islands, and is divided into the Old Town or the City, and the New Town. The armoury here is one of the finest, and contains arms for 40,000 men. Here is also a large arsenal, well stored with all the implements for building and fitting out the galleys. The harbour is not deep enough for men of war. Gold and silver stuffs are made here. The inhabitants are estimated at 90,000. With respect to commerce, Marseilles has been eminent, since the days of antiquity, and it is now sometimes called Europe in Miniature, on account of the variety of dresses and languages. In 1649, the plague raged with great violence in Marseilles, and with still greater in 1720, 1721, and 1722, when it carried off 50,000 of the inhabitants. During this last dreadful visitation, M. de Belfunce, (the "Marseilles good bishop," celebrated by Pope) the canon Bourgeret, the magistrate Moustier, and the commandant Langeron, by their intrepid and indefatigable humanity, did the most signal honour to themselves and to human nature. MA'RY, daughter of Henry VIII. succeeded to the throne of England on the death of Edward VI. which happened July 6, 1553. There were great struggles made at first by the dukes of Northumberland, Suffolk, and others, in favour of lady Jone Grey; but that party being quashed, Mary was crowned October 1; and the parliament, which the court had taken care, by all manner of artifices, and even violence, in managing the elections, and returns, to have at their devotion, met on the 10th. As to the lords, though they had most of them professed the Protestant religion in the reign of Edward, the greatest part of them appeared zealous catholics under queen Mary. This parliament immediately repealed the divorce of the queen's mother, by which they a second time declared the princess Elizabeth illegitimate. Then they made void all the laws concerning religion, restored the mass, and brought all things back to the state they were in at the latter end of Henry VIII.'s reign. Gardner not thinking it advisable as yet to proceed any further; but the queen was impatient to have the pope's full power, and the nation re-united to the holy see. A marriage being in treaty between the emperor's son, Philip of Spain, and queen Mary, the house of commons addressed the queen upon it; at which being offended, she dissolved the parliament. When the parliament was sitting, the convocation decided in favour of transubstantiation, after a sham disputation between the Protestant and Popish clergy; in which the former, who were but six in the house, were run down with numbers and noise, for want of argument. The treaty of marriage between Philip and Mary was signed January 12, 1554. As soon as it was published, murmurs and complaints were every where heard against it; and an insurrection soon broke out, of which the marriage was either the real or the pretended cause. It was concerted between the duke of Suffolk, Sir Thos. Wyatt, and Sir Peter Carew; but it was soon quelled. On Feb. 12, lady Jane Grey was beheaded, behaving with the utmost resignation and fortitude, after she had seen the headless body of her husband carried along by her from the same execution. And nine days after the duke of Suffolk, her father, underwent the same fate. In the mean time, Brent one of Wyatt's captains, was hanged, with 58 of his men; after which, 600 prisoners were brought before the queen, with ropes about their necks, and received their pardon. Wyatt, on his trial, accused the princess Elizabeth as an accomplice in his conspiracy; but, finding he must die, he cleared her of all on his second examination, as also at the place of execution. However, his accusation occasioned the princess to be sent to the tower, where she endured a long and severe confinement, and was afterwards removed a prisoner to Woodstock. A parliament was now to be procured, which should approve of the queen's intended marriage, and restore the pope's authority, both of which the major part of the nation was against, and a great many of those who were for the Roman catholic religion thought that the pope's authority was by no means necessary to the church. The parliament, meeting on April 2, approved the treaty of marriage between the queen and Philip, who arrived at Southampton, July 19; and they were married by Gardiner on the 25th, Philip being 29 years old, but Mary 38. The same day they were proclaimed king and queen of England, France, and Naples, with other titles. Care was taken, by the articles of marriage, that Philip should have no share in the government of England. The parliament meeting again Nov. 11, Pole was at last sent over, in quality of the pope's legate, and arrived the 24th. He opened his legation before the king, queen, and both houses of parliament, telling them, the design of it was to bring back the straying sheep to the fold of Christ. On Nov. 29, the grand work of reconciling the kingdom to the pope was effected. Popery being now fully established, the spirit of it soon appeared in the most violent and bloody persecution against the protestants. Pole was for reducing them by gentle means, without any force or corporal punishments; but Gardiner's violent counsels were most agreeable to the court, and the rest of the bishops. It was therefore resolved to leave to him the business of extirpating heresy; which he afterwards transferred to Bonner, bishop of London, who was, if possible, more furious and bloody than himself. The first sacrifice to popish zeal and bigotry was Hooper, who had been bishop of Gloucester; and before the end of the year no less than 57 persons were burnt. The so much expected deliverance

of the queen, which had elated the Romish party to the highest degree, proved only a false conception, which cast them down as much. And king Philip, now despairing of issue by his queen, whereby he hoped to have united the monarchies of Spain and England, and growing weary of her, as she was neither young nor handsome, left England on Sept. 4th, to the no small mortification of the queen. Soon after, Gardiner, bishop of Winchester, died. On March 21, 1556, Cranmer was burnt, and 85 perished in the flames under Bonner's management, who discovered on these occasions more than brutal cruelty. Pole succeeded Cranmer in the archbishopric of Canterbury. The following year, 79 protestants underwent the same fiery trial; nor could the dead escape the effects of popish malice. The bones of Fagius and Bucer were dug up and burnt at Cambridge, after they had been ridiculously cited before the commissioners to give an account of their faith. Whilst the queen and court were wholly intent upon these violent methods for suppressing heresy, they suffered themselves to be seduced by Spanish counsels to a rupture with France. They gained a great victory over the French at St. Quintin; but at the same time they lost Calais, which this nation had been in possession of ever since the reign of Edward III. the duke of Guise making himself master of it in the beginning of the year 1558; as also of Guisnes, and the castle of Hames, which were the only remains of the English conquests in France. The loss of Calais occasioned great uneasiness and murmurings among the people; and the queen herself was so sensibly touched with it, that she told those about her, "That she should die; and if they would know the cause, they must dissect her after her death, and they should find Calais at her heart." ME'CCA, a city of Hedjas in Arabia, seated on a barren spot, in a valley, surrounded by little hills, about a day's journey from the Red Sea. It has neither walls nor gates, but the buildings are better here than in any other town of Arabia. What chiefly supports it, is the annual resort of a great many thousand pilgrims at a certain season of the year; for, at other times, the shops are scarcely open. The inhabitants are poor, very thin, lean, and swarthy. The hills about the town are numerous; all consist of a blackish rock; and some of them are half a mile in circumference. The town has plenty of water, and yet little garden-stuff; but there are several sorts of good fruit, as grapes, melons, water-melons, and cucumbers. Numbers of sheep are brought hither to be sold to the pilgrims. Mecca stands in a very hot climate, and the inhabitants usually sleep on the tops of their houses, for the sake of coolness. Among its edifices, the most remarkable is the famous Kaba, or House of God, held in high veneration by the Arghars, even before the days of Mahomet, and is said to have been Abraham's house of prayer. The Kaba is a square tower, covered on the top with a piece of black, gold embroidered, silk stuff. It has 42 doors, and resembles, in its form, the Royal Exchange, but is nearly ten times as large. The ground in the middle, or area, is mostly covered with gravel. There are cloisters all round, and in the sides are cells for those that live a monastic life. The arcades round the square are said to be magnificent, and are illuminated with a vast number of lamps, and candlesticks of gold and silver. In the Kaba is a singular relic, the famous black stone said to have been brought from heaven by the angel Gabriel, which every Mussulman must kiss, or at least touch, every time he goes round the Kaba. Here is also the well of Zemzen, said to have been that where Hagar quenched the thirst of Ishmael. Lat. 21. 45. N. lon. 40. 55. E.

The story of its being suspended in the air by a loadstone is now well known to be a fable. Provisions are brought to this place out of Nubia, across the Red Sea, in odd sort of vessels, whose sails are made of mats. It is called the City of the Prophet, because here he was protected by the inhabitants when he fled from Mecca; and here he was first invested with regal power. He also convokes the electorate colleges, and is the first state of the empire after the emperor and king. The chapter consists of 5 prelates and 19 capitulars. This city is finely situated, built, however, in an irregular manner, with narrow streets and old-fashioned houses, and containing, besides the parish churches, 6 monasteries, 5 nunneries, and 6 hospitals. The cathedral is a gloomy fabric. Here are manufactures of stockings and stuffs. Many of the public buildings and private houses have been destroyed, or greatly injured, during the late wars. MEQUINEZ, a city of Fez, in the empire of Morocco, 26 miles to the W. of Fez, seated in a pleasant plain, having a very serene and clear air; for which reason the emperor resides in this place in preference to Fez. It is now the capital of the whole empire, to which the bashaws and alcayds resort with the tribute and presents every two or three years. In the middle of the city the Jews have a place to themselves, the gates of which are locked every night; and there is an alcayd to protect them against the people, who otherwise would plunder their substance. It is death for them to curse, or lift up a hand against a Moor, insomuch that the boys kick them about in the most insolent manner. They are obliged to wear black clothes and caps, and to pull off their shoes whenever they pass by a mosque. Close by Mequinez, on the N. W. side, stands a large negro town, which takes up as much ground as the city, but the houses are not so high, nor so well built. The inhabitants are all blacks, of a dark tawny colour; and thence the emperor recruits the soldiers for his court. The palace stands on the S. side, and is guarded by several hundreds of black eunuchs, who are cleanly dressed, and their knives and scimitars covered with wrought silver. The houses are very good, but the streets exceedingly narrow, and hardly any of the windows to be seen, except little holes to look out at. The houses are flat at the top; so that, in many places, they can walk a great way upon them. The women live in the upper apartments, and often visit each other from the tops of the houses. When they go abroad, they have their heads covered with their outward garment, which comes down close to their eyes; and underneath they tie a piece of white cloth, to hide the lower part of their faces. They are quite covered all over, except their legs, which are generally naked; but within doors they appear in their hair, and have only a single fillet over their foreheads. Their customs and manners are much the same as those of other Mahometans. Lat. 33. 16. N. lon. 6. 6. W.

ME'RCURY, *s.* [*mercurius*, Lat.] in the solar system, is the nearest planet to the sun. It is from his proximity to the sun that he is so seldom within the sphere of our observation, being lost in the splendour of the solar brightness; yet he emits a very bright white light. This planet is oftener seen in those parts of the world which are more southward than that which we inhabit, and oftener to us than those which live nearer the north pole; for, the more oblique the sphere is, the more parallel with the horizon is the planet's path in the zodiac. His mean distance from the sun is 387 of those parts of which the earth's distanee is 1000, and therefore in English miles about 37 millions. His periodic, sidereal, and synodic revolutions are 87d. 23h. 14m. 25s. 9-10ths; 87d. 22h. 15m. 37s.; and 115l. 21h. 3m. 22⅓s. respectively. His hourly motion in its orbit is about 100,000 miles. His rotation round his axis, and consequently the length of his day, is at present unknown to us. His diameter is 3264 miles, and therefore his solid contents about 7-100ths of the earth's. The inclination of his orbit, or his greatest heliocentric latitude, is 7°; but his greatest geocentric latitude, on account of his much greater nearness to the sun than to the earth, is only about 5°. His eccentricity is 796 of those parts of which the earth's distance from the sun is 10,000, and the greatest equation of his orbit 23° 40′ 49″. The place of his aphelion (1800) was in Sagittarius 14° 31′ 53″, and ascending node in 15° 58′ 45′ of Taurus; the annual motion of the former being 67″, and of the latter 45″. Being an inferior planet, he is never seen in opposition to the sun, as he never recedes from him more than about 28°, and in some of his revolutions scarcely 18°; the former taking place when he is in his aphelion, and the latter when he is in his perihelion, at the time of his greatest elongation. The number of days he is retrograde in a synodic revolution is about 22, in which time the arc of retrogradation is from 9° to 16°, according to his position with respect to his perihelion or aphelion at the time. Mercury changes his phases, like the moon, according to his various positions with regard to the earth and sun; except only, that he never appears quite full, because his enlightened side is never turned directly towards us, unless when he is so near the sun as to be lost to our sight in his beams; and as his enlightened side is always towards the sun, it is plain that he shines not by any light of his own; for, if he did, he would constantly appear round. The best observations of this planet are those made when he is seen on the sun's disk, called his *transit*; for, in his inferior conjunction, he sometimes passes before the sun like a little black spot, eclipsing a small part of the sun's body, only observable with the telescope. Such phænomena can only happen when the planet is in or near one of his nodes, at that time, which is about the beginning of May and November; for the sun's place in the ecliptic must be the same, or nearly the same, with the planet's ascending or descending node. Dr. Halley has given us several periods from which the times that these phænomena happen may be calculated; and as they are curious appearances which seldom occur, we will note down the times of 26 that happen in 201 years, as deduced from his periods, corrected by observations on the several transits that have happened since the discovery of telescopes.

Those transits that may be seen from beginning to end, in London, are marked with two asterisks, but those that may be seen only in part are marked with one. The third column of the tables denotes the distance of the planet's centre from the sun's, either N. or S. at the time of the middle; and the last, the semiduration of Mercury's centre upon the sun's disk. If you subtract the semiduration of any particular transit noted in the table, from its middle time, the remainder will give the time of the planet's central ingress; and, by adding it, you will have that of his central egress. The duration of a central transit at the ascending node is 5h. 31m. and at the other node about 8h. 1m. The duration of ingress or egress, in the former case, amounts to about 1½ min. and in the latter to about 3 min. M. Cassini, from the duration of the egress of the transit of Nov. 3d. 1697, found Mercury's apparent diameter to be about 11″, from which he deduced his diameter at the other node to be almost 13½; but later, and probably more accurate observations, have determined that the apparent diameter of this planet at the ascending node does not exceed 9″.—In mythology, a deity held to be the messenger of the other gods, to preside over eloquence and trade, to be the inventor of music, the interpreter of the will of the other deities, and the son of Jupiter by Mars. In chymistry, quicksilver. This metal in the temperature of our atmosphere is a fluid having the appearance of melted silver. It is the heaviest of all metals except platina and gold. ME'XICO, a city of North America, capital of the province of that name. It was a flourishing place before the Spaniards entered the country, and is seated on several islands in a salt-water lake, to which there is no entrance but by five causeways, three of which are about two miles in length. It formerly contained 80,000 houses, with several large temples full of rich idols, and three palaces where the emperor of Mexico resided. Mexico was taken by Ferdinand Cortez, in 1521, after a siege of three months. As the Mexicans defended themselves from street to street, it was almost ruined, but afterwards rebuilt by the Spaniards. It now contains about 35,000 houses, built of stone and brick, with a suburb of 3000 houses inhabited by the native Americans, 29 churches, aad 22 monasteries and nunneries. It is the usual residence of the viceroy, whose employment continues three years, and has a royal audience, an university, and the tribunal of the inquisition. All the streets are straight, and exactly disposed in point of regularity, and it is remarkable for having neither gates, walls, nor artillery. The revenue of the cathedral amounts to nearly £80,000 a year, out of which the archbishop receives annually £15,000 besides vast sums that arise by perquisites. Mexico enjoys a prodigious commerce, being the centre of all the trade carried on between Spanish America and Europe, and Spanish America and the East Indies. An incredible number of horses and mules are employed in transporting goods from Acapulco to Vera Cruz, and from Vera Cruz to Acapulco. Hither all the gold and silver is brought to be coined; here the king's fifth is deposited; and all that immense quantity of plate wrought which is annually sent to Europe. This place was overflowed by an inundation in October 1629, in which 40,000 persons were drowned. This obliged the Spaniards to make a great conduit through a mountain, in order to empty the lake; which being done, part of the town became seated on dry land. Mexico is supplied with fresh water by an aqueduct of three miles in length. The Spaniards do not make a tenth part of the inhabitants, the others being negroes, mulattoes, native Americans, and a mixture of them all. It is 130 miles W. by N. of Vera Cruz, and 250 N. E. by N. of Acapulco. Lat. 19. 54. N. lon. 99. 36. W.

ME'XICO, or NEW SPAIN, a country of North America, including, in its largest sense, all that extensive peninsula situated between Louisiana and unknown countries on the N. and Terra Firma, in South America, on the S. but the audience of Mexico contains only the provinces of Mexico Proper, Meducacan, Guasteca, Tlascala, Guaxaca, Tabasco, and Yucatan. It is washed on the E. by the Atlantic Ocean; and on the S. and W. by the S. Sea, and is above 2000 miles in length, and from 60 to 600 in breadth. It is divided into 23 districts or provinces, the principal of which is that of Mexico Proper, and contains mines of gold and silver, of the latter of which they count above a thousand, besides mines of iron, copper, lead, alum, crystal, vitriol, precious stones, marble, &c. The soil produces Indian corn, cabbage-trees, cocoa-nuts, vanellas, plantains, pine-apples, cochineal, cotton, and several other fruits, gums, and drugs, proper to the climate. Before the Spaniards came here, they had a sort of dogs that did not bark, but howled like wolves; gray lions, less formidable than those of Africa; and also small tigers, bears, though uncommon, elks or moose-deer, pecaries, waires, beavers, opossums, armadilloes, guanoes, flying-squirrels, racoons, crocodiles, manattes or sea-cows, monkeys, parrots, macaws, pelicans, cormorants, and a great variety of other birds, snakes, scorpions, and other insects. The Spanish clergy are very numerous, and there are a great number of convents. In general, it is a mountainous country, intermixed with many rich valleys; but the highest mountains are near the coast of the South Sea, many of which are volcanoes. The eastern shore is a flat, level country, full of bogs and morasses, overflowed in the rainy season, which is at the same time as our summer. This province is vastly populous, and the original natives in general pass their lives in easy circumstances. In some places, the collection of the public revenues, and the excercise of the police, are deposited in the hands of their chiefs; and among the inferior orders of Indians, many are admitted to offices in the church, army, and magistracy, in all the principal Spanish towns. The revenues of the crown arise from a fifth part of the gold and silver, and from the duties and customs, as well as from the lands held of the crown.

There are still, however, very extensive tracts of uncultivated heath. Besides the Thames, the Lea, and the Coln, Middlesex is watered by several small streams, one of which, called the New River, is artificially brought from Amwell, in Herts, for the purpose of supplying London with water. Indeed, the whole county may be considered as a demesne to the metropolis, the land being laid out in gardens, pastures, and inclosures, of all sorts, for its convenience and support.

Here are 22 gates, 230 churches, 90 convents, 100 religious fraternities, 120 schools, and about 250,000 inhabitants. Broad and straight streets are but few in comparison to the narrow and crooked; and the many paper windows, or glass and paper panes intermixed, even in the finest palaces, have a mean appearance. The governor's palace, or the old regency-house, is the most stately and spacious. The cathedral is a grand structure, being 500 feet long, 200 broad, and 400 high. It stands in the centre of the city, and, next to St. Peter's at Rome, is the largest in Italy. This vast fabric is entirely built of solid white marble, and is supported by 50 columns, said to be 84 feet high. The 4 pillars under the cupola are 28 feet in circumference. The college of St. Ambrose has a library, which, beside some thousands of manuscripts, contains 45,000 printed volumes. In it is an academy of painting. The most considerable commerce of the inhabitants is in grain (especially rice,) cattle, and cheese, which they export; and they have manufactures of silk and velvet stuffs, stockings, handkerchiefs, ribbons, gold and silver lace, and embroideries, woollen and linen cloths, glass, and earthen ware in imitation of China. Here are several rivers, and many canals. It is 65 miles N. of Genoa, 145 N. N. W. of Florence, and 270 N. W. of Rome. Lat. 45. 28. N. lon. 9. 16. E.

It has 16 deep and safe creeks, 5 bays, and 3 roads, all distinguished by their several names, in which 1000 sail of ships may ride in perfect security, and at sufficient distance from each other. There is no danger in sailing in or out with the tide, by day or night, from whatever point the wind may happen to blow; and if a ship in distress comes in, without either anchor or cable, she may run on shore, on soft ooze, and there lie in safety till she is refitted. The spring tide rises in this harbour 36 feet, so that ships may at any time be laid ashore. The breadth of the entrance, between rock and rock, is but 200 yards at high water, and 112 at low water. One great advantage attending this harbour is, that a ship may be in or out of it in an hour's time, and in 8 or 10 hours may be on the coast of Ireland, or off the Land's End; they may also get out to the W. much sooner than from either Plymouth or Falmouth. The Monguls dwell in tents, or little moveable houses, and live entirely on the produce of their cattle, which are horses, camels, cows, and sheep. It is a large, handsome town, and carries on a considerable trade with Bristol by the Wye. In its once stately castle, the remains of which shew it to have been very strong, Henry V. from hence called Henry of Monmouth, the conqueror of France, was born. It is 21 miles W. by S. of Gloucester, and 128 W. by N. of London. A plentiful market for corn and provisions on Saturday. Fairs on Whitsun-Tuesday, September 4th, and November 22d.

The air is temperate and healthy, and the soil fruitful, though mountainous and woody. The hills feed sheep, goats, and horned cattle, and the vallies produce plenty of grass and corn. Beside the Wye, the Mymow, and the Rhyney, or Rumney, this county has almost peculiar to itself the river Usk, which divides it into two unequal portions, the eastern and largest part of which is a tract, fertile, on the whole, in corn and pastures, and well wooded. It abounds with limestone, which is burnt on the spot, for the general manure of the county. The smaller western portion is mountainous, and in great part unfavourable for cultivation; whence it is devoted to the feeding of sheep. It has several long narrow vallies, watered by streams that fall into the Bristol Channel. All the rivers above mentioned, particularly the Wye and Usk, abound with fish, especially salmon and trout. Monmouthshire was formerly reckoned one of the counties of Wales; and, from the names of its towns and villages, its mountainous rugged surface, as well as its situation beyond the Wye, which seems to form a natural boundary between England and Wales in this part, it certainly partakes most of the character of the latter country, though since the reign of Charles II. when it was added to the Oxford circuit, it has been considered as an English county. The sovereign, however, is rich and powerful, having subdued most of the petty princes around. This is all we can find concerning this unknown empire.

Montpellier is pleasantly seated upon a hill, by the river Lez, 5 miles from the Mediterranean, 27 S. W. of Nismes, and 212 S. by E. of Paris. Lat. 43. 36½ N. lon 3. 57. E.

MONTROSE, a town of Angus-shire, containing, in 1790, about 6194 inhabitants. At high water it is almost surrounded by the sea. The harbour is a fine semicircular bason, with a handsome stone pier; and a great number of trading vessels belong to this port. The buildings are neat, and many of them in the modern taste. The most remarkable are the town-house, the presbyterian church, and an elegant episcopal chapel. A great quantity of malt is made here; and there are manufactures of sail-cloth, linen, coloured and white thread, brown sheeting, Osnaburgs, and cotton stockings, as also a tannery and rope-works. The salmon fisheries on the N. and S. Esk form a valuable branch of commerce. Montrose is seated on a gentle eminence, in a peninsula, formed by the estuary of S. Esk (over which a new bridge has been lately erected) and the German Ocean, 48 miles N. E. of Edinburgh.

MONTSERRA'T, a well watered fruitful island in the West Indies, discovered, in 1493, by Columbus, and so named by him from its resemblance to a mountain of the same name in Spain. It is about 9 miles in length, and as much in breadth, and is divided into two parishes. The mountains are covered with cedar, cypress, the iron-tree, with other woods, and some odoriferous shrubs. As to soil, animals, and commerce, Montserrat is much the same as the other Caribbee islands. It is possessed by the English, and is 30 miles S. W. of Antigua. Lat. 16. 49. N. lon. 62. 27. W.

MOON, *s.* [*mona*, Sax.] in the solar system, is a satellite or secondary planet of the earth, considered as a primary one, about which she revolves in an elliptic orbit, at the distance of about 240,000 miles, at a mean rate. Next to the sun, she is the most splendid and shining globe in the heavens; and by dissipating, in some measure, the darkness of the night, subdividing the year into months, and regulating the flux and reflux of the sea, she not only becomes a pleasing, but a welcome object; affording much for speculation to the contemplative mind, and of real use to the navigator, the traveller, and the husbandman. That the moon appears so much larger than the other planets, is owing to her vicinity to us; for to a spectator in the sun she would be scarcely visible, without the assistance of a telescope. Her distance is but small from us, when compared with that of the other heavenly bodies; which is easily proved from her very great horizontal parallax, which amounts sometimes to 61′ 25″. If the moon were a body possessing native light, we should not perceive any diversity of appearance; but as she shines entirely by light received from the sun, and reflected by her surface, it follows, that, according to the situation of the beholder with respect to the illuminated part, he will see more or less of her reflected beams, for only one half of a globe can be enlightened at once. Hence, while she is making her revolution round the heavens, she undergoes great changes in her appearance. In every revolution of the moon about the earth, she turns once round upon her axis, and therefore always presents the same face to our view; and as, during her course round the earth, the sun enlightens successively every part of her globe only once, consequently she has but one day in all that time, and her day and night together are as long as our lunar month. As we see only one side of the moon, we are therefore invisible to the inhabitants on the opposite side, unless they take a journey to that side which is next to us, for which purpose some of them must travel more than 1500 miles. And as the earth, from one half of the moon, is never seen, so, from the middle of the other half, it is always seen overhead, turning round almost thirty times as quick as the moon does. To her inhabitants, the earth seems to be the largest body in the universe, her apparent diameter constantly occupying from 1° 47′ 46″ to 2° 2′ 50″ of the lunar celestial regions. Her periodic, sidereal, and synodic revolutions, are, respectively, 27d. 7h. 43m. 4s. 3-5ths; 27d. 7h. 43m. 11½s.; and 29d. 12h. 44m. 3s. Her diameter is 2171 miles; her surface about 3-40ths of the earth's; and her solid contents 1 49th of the same. The moon's apogee is not fixed in any particular point of the ecliptic, but makes a complete revolution, according to the order of the signs, in 3231d. 8h. 34m. 57½s. as measured by the equinoxes, but from one fixed star to the same again in 3232d. 11h. 14m. 31s. Her nodes also have a revolution, contrary to the order of the signs, in 6798d. 4h. 52m. 52s. 3-10ths, according to the equinoxes, but in 6803d. 2h. 55m. 18s. 2 5ths, as measured by the stars. The inclination of her orbit to the ecliptic varies from 4° 59′ to 5° 17½′. It is greatest of all at those new or full moons that happen at the nodes, but least of all at those that happen 90° from them. The mean inclination is 5° 8′ 46″. The moon's apparent diameter varies according to her horizontal parallax. Her greatest diameter 33′ 34″ takes place when she is in perigee at the time of full moon, and the least 29′ 25″ when she is in apogee at the time of the change. The moon's horizontal parallax bears a constant proportion to her apparent diameter, and may be found at any time by multiplying it by 1 8248-10000ths. The mean eccentricity of her orbit is 547-10000ths of her mean distance from the earth, and the greatest equation of her orbit 7° 39′. As the moon is a dark body of itself, and has no light but what she receives from the sun, it is evident that when she is at the full, and in the ecliptic, or nearly so, the interposition of the earth must prevent her at that time from being illuminated, causing what we usually term an eclipse of the moon. But when the moon, at the time of her change, is in the plane of the earth's orbit, or nearly so, her interposition between us and the sun must consequently hide the sun from our view, while she is in that position, causing what we improperly call an eclipse of the sun, for it is the earth that is really obscured. Eclipses of the sun, at any particular place, happen much more seldom than those of the moon; for those of the latter, on account of her real deprivation of light, are visible to every part of this globe of which she is above the horizon; but those of the former, on account of the smallness of the moon's body compared to the earth's, are visible to those parts only between which and the sun she is interposed; so that there may be an eclipse of the sun at Edinburgh, and not the least indication of one at London. If the sun at the time of the change be within about 17° of either of the lunar nodes, there will be an eclipse of the sun to some part of the earth; and if, at the time of the full, he is within about 12°, the moon will be eclipsed. The greatest eclipses of the moon take place when she is in one of her nodes at the time of the opposition; but the greatest eclipses of the sun in England only happen when the moon has considerable north latitude, and the sun at the same time above the horizon; though, when he is posited in one of the nodes at that time, the eclipse remains

longest upon the earth, which is about 5h. 51m. The longest duration of an eclipse of the moon is 3h. 58m. nearly.

There will be no total eclipse of the sun during the 19th century. The two next great eclipses will take place the first on November 19th, 1816, time of new moon at 21 minutes past 10 in the morning, quantity eclipsed 8½ digits; and the second on Sept. 7, 1820, time of new moon at 45 minutes past 1 in the afternoon, digits eclipsed near 11. The face of the moon is greatly diversified with inequalities, and parts of different colours, some brighter and some darker than the other parts of her disk. When viewed through a telescope, her face is evidently diversified with hills and valleys; and the same is also shewn by the edge or border of the moon appearing jagged about the confines of the illuminated part of her disk, when the moon is either horned or gibbous. That the spots in the moon, which are taken for mountains and valleys, are really such, is evident from their shadows; for, in all situations of the moon, the elevated parts are constantly found to cast a triangular shadow in a direction from the sun; and, on the contrary, the cavities are always dark on the side next the sun, and illuminated on the opposite one; which is exactly conformable to what we observe of hills and valleys on the earth: and, as the tops of these mountains are considerably elevated above the other parts of her surface, they are illuminated when they are at some distance from the confines of her enlightened hemisphere; from which circumstance a mean of determining their heights is afforded. The observations of Mr. Schroeter concerning the lunar mountains, are as follow: "The most lofty mountain on the surface of our globe is supposed to be Chimboraco, which is not 20,000 feet in height; but there are many in the moon which are much higher; that which is distinguished by the name of Leibinitz, is not less than 25,000 feet. This elevation will appear more extraordinary, if compared with the moon's diameter, of which it is 1-214ths; whereas Chimboraco is not above 1-1017ths of that of the earth; thus considered, the lunar mountains are near five times as high as any on our globe." As the moon has on her surface mountains and valleys, in common with the earth, some astronomers have discoversd a still greater similarity, viz. that some of these are really volcanoes, emitting fires as those of the earth do. An appearance of this kind was discovered some few years ago by Don Ulloa, in an eclipse of the sun. It was a small bright spot like a star near the margin of the moon, and which he at that time supposed to be a hole or valley, with the sun's light shining through it. Succeeding observations, however, have induced astronomers to attribute appearances of this kind to the eruption of volcanic fire; and, on the 19th of April, 1787, Dr. Herschel discovered three volcanoes in the dark part of the moon; two of them seemed to be almost extinct, but the third shewed an actual eruption of fire, or luminous matter, resembling a small piece of burning charcoal covered by a very thin coat of white ashes; it had a degree of brightness about as strong as that with which such a coal would be seen to glow in faint day-light. The adjacent parts of the volcanic mountain seemed faintly illuminated by the eruption. A similar eruption appeared on the 4th of May, 1783. On the 7th of March, 1794, a few minutes before eight o'clock in the evening, Mr. Wilkins, of Norwich, an eminent architect, observed, with the naked eye, a very bright spot upon the dark part of the moon: the whole time he saw it, it was a fixed, steady light, except the moment before it disappeared, when its brightness increased; he conjectures that he saw it above five minutes. The same phænomenon was observed by Mr. T. Stretton, in St. John's-square, Clerkenwell, London. *Phil. Trans.* 1794. On the 13th of April, 1793, and 5th of Feb. 1794, M. Piazzi, astronomer-royal at Palermo, observed a bright spot upon the dark part of the moon. Several other astronomers have observed the same phænomenon. See *Memoirs de Berlin*, for 1778. They inhabit the pleasant valleys of Koter, along the river Kerka, Cettina, Narenta, and among the inland mountains of Dalmatia. "Friendship," says the Abbé Fortes, "is lasting among the Morlacchi. They have even made it a kind of religious point, and tie the sacred bond at the foot of the altar." The Sclavonian ritual contains a particular benediction, for the solemn union of two male or two female friends, in the presence of the congregation. He was present at the union of two young women, who were made *Posestreme*, in the church of Perussich. "The satisfaction," he continues, "that sparkled in their eyes, when the ceremony was performed, gave a convincing proof, that delicacy of sentiment can lodge in minds not formed, or rather not corrupted, by society which we call civilized. The male friends thus united are called *Pobratimi*, and the females *Posestreme*, which mean half-brothers and half-sisters."

MORO'CCO, an empire of Africa, comprehending a considerable part of the antient Mauritania, bounded on the W. by the Atlantic Ocean, on the E. by Algiers and Biledulgerid, on the N. by the Mediterranean, and on the S. by Zahara. Its greatest length is about 450 miles; and, where widest, about 390. The territories of Morocco are formed by the union of several small kingdoms, antiently limited to a single province, and perpetually at variance with each other, till, at last, they were all subdued, and united under one sovereign by the sharifs. The S. part of the empire contains the kingdom of Suz, Tarudant, Morocco Proper, Tasiletz, and Segilmessa; and the N. part, those of Fez, Mequinez, and Tremecen; but the latter having been conquered by the Turks of Algiers, is now a part of that regency. The air of the country is very pure, and pretty temperate, especially to the N. of Mount Atlas. The soil, though sandy and dry on the western coast, is exceeding fertile; the land containing within itself salts sufficient to make it fruitful. The increase of corn is often as sixty to one. The fruits, such as vines, figs, melons, apricots, apples, pears, olives, and the prickly pear, or Barbary

fig, the palm-tree, as well as the pastures, are excellent, but dates ripen with difficulty; and indeed the country, &c. is not properly cultivated, as two-thirds at least of it lie waste. Acorns, which taste like chesnuts, salt, and wax, abound here. The humidity of the atmosphere is so corrosive, that it quickly covers with rust iron, steel, metals, and even the keys and scissars carried in the pocket. The Moors make food of the locusts; prodigious quantities of them are brought to market, salted and dried like red herrings. The inhabitants are Mahometans, of a tawny complexion, robust, and very skilful in managing a horse and wielding a lance. There are two sorts of inhabitants; the Arabs, who dwell in moveable villages, composed of about 100 tents, and the Bereberies, or Brebes, who are the antient inhabitants, and dwell in cities and towns. There are a great number of Christian slaves, and some merchants, upon the coast, besides a multitude of Jews, who carry on almost all the trade, especially by land with the negroes, to whom they send large caravans, who travel over vast deserts, almost destitute of water. They carry with them woollen manufactures, silk, salt, &c. and, in return, have slaves, gold, and elephants' teeth. Out of the slaves the emperor recruits his cavalry. They also send large caravans to Mecca every year, partly out of devotion, and partly for trade, consisting of several thousand camels, horses, and mules. Their commodities are woollen manufactures, Morocco leather, indigo, cochineal, ostrich feathers, salt, and wax; in return for which they have silks, muslins, calicoes, coffee, and drugs. In the deserts are lions, tigers, leopards, and serpents of several kinds. The fruits are dates, figs, grapes, almonds, lemons, oranges, melons, pomegranates, apples, pears, &c. They have also flax and hemp, but little timber. The naval force consists chiefly of rovers, who now and then take large prizes, especially those belonging to Salle. The emperor is absolute, his will being a law, and he often exercises great cruelties. He can bring 100,000 men into the field, half of which are foot, and half horse; but they are poorly armed, and know but little of the art of war.

MORO'CCO, the capital of the kingdom of Morocco, seated in a beautiful plain, planted with palm-trees, formed by a chain of mountains on the N. having Mount Atlas, from which it is distant about 20 miles, on the S. and E. Though one of the capitals of the empire, (for there are three, Morocco, Mequinez, and Fez,) it has nothing to recommend it but its great extent, and the royal palace. It is inclosed by remarkably strong walls, built of tabby, the extent of which still exists entire, and supposes a city which might contain 300,000 souls; they are flanked by square towers, and surrounded by a wide and deep ditch. The mosques are more numerous than magnificent. The streets are narrow, dirty, and irregular, and many of the houses uninhabited, and falling to ruin. M. Chenier doubts whether Morocco contains 30,000 inhabitants, even when the court is there. The Jews, who are pretty numerous here, have a separate town, walled in, and under the charge of an alcade, appointed by the emperor. They have a market of their own; and when they enter the Moorish town, market, or palace, they are compelled to be barefooted. It has two gates, which are regularly shut every evening at nine o'clock, after which no person can enter or depart, till they are opened the next morning. The palace is a very extensive and solid building, with gates composed of Gothic arches, embellished with ornaments in the Arabian taste. Within the walls are various courts and gardens elegantly laid out by European gardeners. Lat. 31. 12. N. lon. 6. 45. W.

It is the same to the Portuguese as the Cape of Good Hope is to the Dutch; for which reason there is generally a strong garrison, but the governor is changed every three years. MO'SCOW, one of the most antient and conspicuous provinces of Russia, formerly a duchy, but now one of the 41 governments of that vast empire. Its capital is of the same name.

MO'SCOW, a large city of the Russian empire, capital of the government of Moscow, and formerly of the whole empire. It may be considered as a town built upon the Asiatic model, but gradually becoming more and more European; exhibiting, in its present state, a motley mixture of discordant architecture. It is distributed into five divisions, viz. 1. Kremlin; 2. The Khitaigorod, or the Chinese Town; 3. The Bielgorod, or White Town; 4. Semlainogorod; 5. The Sloboda, or suburbs, which form a vast exterior circle round all the other parts, and are invested by a low rampart and ditch. These suburbs contain, besides buildings of all kinds, corn-fields, much open pasture, and some small lakes, which give rise to the Neglina. Moscow exhibits an astonishing degree of extent and variety, irregularity and contrast. The streets, in general, are very long and broad. Some of them are paved; others, particularly in the suburbs, are formed with trunks of trees, or are boarded with planks like the floor of a room. Wretched hovels are blended with large palaces; cottages of one story stand next to the most stately mansions; many brick structures are covered with wooden tops; some of the wooden houses are painted; others have iron doors and roofs. Numerous churches appear in every quarter, built in a peculiar style of architecture; some with domes of copper, others of tin, gilt, or painted green, and many roofed with wood. Moscow is certainly the largest town in Europe; its circumference, within the rampart that incloses the suburbs, being 26 miles; but it is built in such a straggling manner, that its population corresponds in no degree with its extent. It has, however, been pretty well ascertained; it contains, within the ramparts, 300,000 souls. It is still the most populous city in the empire, notwithstanding the residence of the court is at Petersburgh. The places of public worship in Moscow, including chapels, amount to above 1000; of these, 484 are public churches, 199 of which are of brick, stuccoed, or white-washed; and the others of wood, painted red. Some of their bells are of a stupendous size; they hang in belfreys detached from the church, are fixed immoveably to the beams, and are rung by a rope tied to the clapper. It has always been esteemed here a meritorious act of religion to present a church with bells; and the piety of the donor has been measured by their magnitude. Accordingly, Boris Godunof, who gave a bell of 288,000 pounds to the cathedral of Moscow, was the most pious sovereign of Russia, till he was surpassed by the empress Anne, who presented a bell that weighs 432,000 pounds, and is the largest in the known world. Among the public institutions in Moscow, is the Foundling Hospital, endowed in 1764, by Catharine, and supported by voluntary contributions; to encourage which, she granted to all benefactors some valuable privileges, in proportion to the extent of their liberality; and, it is remarkable, that a private merchant, named Dimidof, has expended on this charity 200,000*£*. The gardens hereabouts yield the famous transparent apple, called by the Russians Naliwi, with variety of other fruits. Moscow is the centre of the inland commerce of Russia, particularly connecting the trade between Europe and Siberia. The navigation to this city is formed solely by the Moskva, which rises near Ruza, and falling into the Occa, near Colomna, communicates, by that river, with the Volga. But as the Moskva is navigable in the spring only, upon the melting of the snows, the principal merchandise is conveyed upon sledges in winter. The annexed plates present a view of the Kremlin and of the Divitchy Monastery. The Kremlin is a hill which was formerly surrounded by marshes on all sides. It contains a royal palace, and is surrounded by a strong wall. The Divitchy Monastery, or Ladies' Convent, usually contains about 150 females; but as they are not allowed to take the veil till they have attained the age of fifty, there are seldom more than 70 nuns, the remainder are noviciates, and at liberty to marry, to visit and receive visits in the convent, under the inspection of a nun. The gates are open all day, and noviciates and their visitors pass and repass without restraint. Such was Moscow before the dreadful conflagration in 1812. This city is 460 miles S. E. of Petersburgh, and 1200 N. by E. of Constantinople. Lat. 55. 45½. N. lon. 37. 51. E.

It contains about 34,000 inhabitants, and is divided into the Old and New Town, which are separated by a canal. The first, though irregularly built, is rich and populous, and contains the palace of the antient dukes of Lorrain. The New Town, whose streets are as straight as a line, was already one of the finest in Europe, before the magnificent works with which Stanislaus I. titular king of Poland, and duke of Lorrain, enriched it. Before the revolution, it had an university, an academy of sciences, and a medical college. It is 10 miles E. of Toul, and 20 S. of Metz. Lat. 48. 42. N. lon. 6. 17. E.

may enter the town. This place is greatly fallen from its antient splendour; for it had a magnificent palace, not a vestige of which is now to be seen, as well as temples, tombs of the emperors, and other antient monuments. A third part of the city is desolate, but the rest is extremely populous, well inhabited, and full of business. The streets are narrow, but handsome and well paved, and on each side are shops, neatly furnished. The public buildings are mean, except a few temples, the city gates, and the famous tower of porcelain, 200 feet high, and divided into 9 stories, by projections, &c. covered with green varnished tiles. They have several manufactures in silk and wool. The number of the inhabitants is said to be 1,000,000, without comprehending the garrison of 40,000 men. The bridges over the river Loire, in which are some islands, are almost a league in length. The suburbs are so large, that they exceed the city. The inhabitants are computed at 80,000. Before the revolution, here was an university, a society of agriculture and arts, and a school of anatomy and surgery; and merchants also had commonly, on their own account, more than 120 ships for Guinea, the French West India islands, Spain, and the Spanish colonies; indeed this port, in respect of the slave trade, might, before that time, be considered as the Liverpool of France. Vessels were fitted out here for the cod-fishery in N. America; and Nantes had a considerable share in the commerce with the United States. A great quantity of salt is made in the territory of Nantes, both at the Bay of Bourgneuf and in the salt-marshes of Guerande and Croisic. Large vessels can come no higher than Paimbœuf, which is some miles below Nantes. It is 37 miles S. W. of Angers, and 217 S. W. of Paris. Lat. 47. 13. N. lon. 1. 28. W.

NA'PLES, a kingdom of Italy, bounded on the N. W. by the pope's territories; on the S. and W. by the Mediterranean; and on the E. by the Adriatic. Its greatest length, from N. W. to S. E. is upwards of 300 miles, and from N. E. to S. W. from 96 to 100; its breadth is variously estimated at from 90 to 30. It is divided into 12 provinces, namely, Terra di Lavora, which was the antient Campania Felix, and of which the city of Naples is the capital; Principato Citeriore and Ulteriore (hither and farther;) Molise; Basilicata; Calabria Citeriore and Ulteriore; Abruzzo Citeriore and Ulteriore; Capitanata; Terra di Bari; and Terra di Otranta; the last three forming the antient Apulia (now called Puglio) on the E. side of the kingdom.—The climate is extremely hot in summer; but the most disagreeable part of the climate is the firoc, or S. E. wind, which is very common in spring, and is still more relaxing. In winter there is seldom any ice or snow, except on the mountains. On account of its fertility, the country has been termed a terrestrial paradise; it abounds with all sorts of grain, the finest fruits, and vegetables of all kinds, with rice, flax, oil, wine, saffron, and manna; poultry; game, and fish, are also plentiful and cheap. It affords also alum, vitriol, sulphur, rock-crystal, marble, and several sorts of minerals, together with fine wool and silk. Besides these products, waistcoats, caps, stockings, and gloves, are also made of the hair or the filaments of a shell fish, which are warmer than those of wool, and of a beautiful glossy green. The principal mountains are the Apennines, which traverse it from N. to S. and the celebrated volcano, Mount Vesuvius. One of the greatest inconveniences to which this kingdom is exposed, is earthquakes, which the eruptions of Mount Vesuvius contribute, in some measure, to prevent. The established religion is the Romish; and the clergy and convents possess two-thirds of the whole kingdom; but the Jews are allowed to settle here. The inhabitants of this country have, at all times, borne but an indifferent character among other nations; gluttony is here a predominant vice, while instances of ebriety are said to be comparatively rare. In the female sex the passion for finery is almost superior to any other; and chastity is not accounted the characteristic virtue of the country. In 1734, the Spaniards made themselves masters of Naples and Sicily, for the Infant Don Carlos, and in 1736, the emperor, by a formal instrument, ceded both these kingdoms to his heirs male and female, and in default thereof to his younger brothers and sisters. However, in the beginning of the year 1806, this dynasty was expelled by the French, who invaded this kingdom with a powerful army, with the avowed intention of transferring the Neapolitan throne to a French prince. Accordingly, after the subjugation of the country, which was principally effected in the month of February, Joseph Buonaparte was created king of Naples—but resigned the kingdom to Murat, the brother-in law of the French emperor, in June, 1808.

NA'PLES, the capital of the above kingdom, is one of the finest cities in the world, is the see of an archbishop, the seat of an university, and is defended by thick walls which surround it, regular bastions, strong towers, deep ditches, and fortified castles. It is about 15 miles in circumference, and has seven large suburbs, containing together 300,000 inhabitants. The palace royal is a spacious and convenient building; but the most magnificent are the cathedral and the chapel of St. Januarius, where they pretend the blood of that saint is preserved. The air of Naples is serene and healthy, and the winter mild. The harbour is capable of containing 500 vessels, which may ride with safety. It is 108 miles S. E. of Rome. Lat. 40. 50½ N. lon. 14. 24. It is so secure a haven, that vessels, when they have passed Tynemouth-bar, are in no danger either from storms or shallows. embankment of the river for the purpose of forming the quays on the N. side, they were reduced to nine. On this bridge were houses, which, in general, stood at some distance from each other. In 1771, a dreadful flood carried away four of these arches, with the houses that stood upon them. This part of the bridge was rebuilt in 1779. The town rises on the N. bank of the river, where the streets upon the ascent are exceedingly steep. Many of the houses are built of stone, but some of them are timber, and the rest of brick. Through this town went part of that wall which extended from sea to sea, and was built by the Romans to defend the Britons against the incursions of the Picts, after all their trained youth had been drawn from the kingdom to recruit the armies of their conquerors. The castle, which is old and ruinous, overlooks the whole town. The exchange, church-houses, and other public buildings, are elegant; and the quay for landing goods, is long and large. Here is a hall for the surgeons, a large hospital, built by the contribution of the keel-men, for the maintenance of the poor of their fraternity; and several charitable foundations, situated in the centre of the great collieries, which have for centuries supplied London, all the eastern, and most of the midland and southern parts of the kingdom with coal. This trade has been the source of great opulence to Newcastle; which, besides, exports large quantities of lead, salt, salmon, butter, tallow, and grindstones; and imports wine and fruit from the S. of Europe, and timber, iron, hemp, &c. from the Baltic and Norway. Ships are sent hence to the Greenland fishery. It also possesses manufactories of steel, iron, and woollen cloth; and in the town and neighbourhood are several glass-houses. The streets in the old part of Newcastle are unsightly and narrow, (so narrow indeed are some of them that the passenger in going through them, may extend his hands and nearly his elbows to the opposite sides of the street, and these are called *chairs*,) and the buildings greatly crowded together; but some of the newer parts are handsome and commodious. The suburbs are chiefly inhabited by keel-men; a rough and sturdy race, employed in carrying the coal down the river in keels, or lighters, to the large ships. Newcastle was made a borough by William the Conqueror, and the first charter which was granted to the townsmen for digging coal was by Henry III. in 1239; but, in 1306, the use of coal for fuel was prohibited in London, by royal proclamation, chiefly because it injured the sale of wood for fuel, great quantities of which were then growing about that city; but this interdiction did not long continue, and we may consider coal as having been dug and exported from this place for more than 400 years. Newcastle is 14 miles N. of Durham, 94 N. of York, and 271 N. by W. of London, on the great road to Edinburgh. Market on Tuesday and Saturday.

Thus I should say, When we come *nigh* to such a place, we shall be *near* home: The *nigher* the enemy, the *nearer* the danger. As a farther proof of this, speaking of the close ties of kindred, we use the word *near*, in preference to that of *nigh*, as implying a less distance, or greater degree of consanguinity between the two persons. NILE, a great river of Africa, which rises in the mountains of Abyssinia, called the *Mountains of the Moon*, near the village of Geesh, in lat. 10. 59. N. lon. 36. 55. E. In some parts of this river there are rocks, whence the water falls several feet, and these are called the cataracts of the Nile. It overflows regularly every year, from the 15th of June to the 17th of September, when it begins to decrease. The fertility of Egypt depends upon the overflowing of the Nile; and they reckon it will be a bad year when it is less than 14 cubits, and above 18; but that 16 is the proper height; and when this happens they make public rejoicings throughout the Delta. This inundation of the Nile is caused by the periodical rains which fall every year between the tropics, and more particularly in Abyssinia. Off the mouth of this river, August 2, 1798, Sir Horatio (afterwards Lord) Nelson, took, or destroyed, a French fleet of 13 sail of the line and 2 frigates. The British fleet consisted of thirteen 74-gun ships and one of 50 guns: in the French line of battle were, 1 of 120 guns, l'Orient, Adm. In all these cases, except the last, one that is *non compos mentis* shall not lose his life for felony or murder; but the drunkard can have no indulgence on the account of the loss of his reason; for, in the eye of the law, his drunkenness does not extenuate, but aggravate his offence.

NO'RFOLK, a county of England bounded on the N. and E. by the German Ocean; on the W. by Cambridgeshire, Lincolnshire, and the Wash, and on the S. and S. E. by Suffolk. It extends 70 miles from E. to W. and 40 from N. to S. It contains 33 hundreds, 1 city, 32 market-towns 660 parishes, and about 270,000 inhabitants. The face of this county varies less than in most tracts of equal extent in England. Not one hill of any considerable height is to be seen in the whole county; yet, in most parts, its surface is broken into gentle swells and depressions. At the western extremity, is a considerable tract of flat fenny land; and, on the east, a narrow tract of marshes runs from the sea, near Yarmouth, to some distance up the country. Several of the western hundreds from Thetford northward, are open and bare, consisting of extensive heaths, the soil of which is a light sand, or hungry gravel. The rest of the county, in general, is arable land, varying in its degrees of fertility. To the N. E. the soil is a light sandy loam, remarkably easy of tillage. The S. E. has a richer and deeper soil. The middle and south abound in clay; and various parts yield chalk and marl. The products of the county vary according to the soil and situation. The lighter arable lands produce barley in great plenty. Wheat is cultivated in the stronger soils. But turnips are more generally grown here than in any other part of the kingdom, and form the basis of the Norfolk husbandry. The peculiar excellence of this culture is that the ground never lies fallow, as the turnips serve to prepare it for corn, beside fattening great numbers of cattle. Much buck-wheat is also grown in the light soils, and used for feeding swine and poultry. The fenny parts yield great quantities of butter, which is sent to London under the name of Cambridge butter. The sheep are a hardy small breed, much valued for their mutton. Turkeys are reared here to a larger size than elsewhere. Rabbits are extremely numerous on the sandy heaths; and there is likewise abundance of game, especially of pheasants. On the sea-coast, herrings and mackerel are caught in great plenty; and Yarmouth, in particular, is noted for the curing of red herrings. The air of this county is sharp and piercing, which throws the seasons more backward than in other counties under the same latitude; but it is very wholesome, particularly in the inland parts. Its principal rivers are the Great Ouse, Nen, Little Ouse, Waveney, Yare, and Bure. Norwich is the capital.

NORFOLK ISLAND, an island in the S. Pacific Ocean lying E. of New South Wales, and settled by a colony of convicts subordinate to that government. It is a fertile spot and very hilly. Among its most valuable productions are the flax plant and a very large species of pine tree. The island is well supplied with streams of good water which abound with very fine eels. The settlement is formed in Sydney Bay; on the S. side of the island. Lat. 29. 30. S. lon. 168. 12. E.

NORMANDY, a ci-devant province of France, on the English Channel and Atlantic Ocean, about 150 miles in length, 80 in breadth, and 600 in circumference. It is one of the most fertile tracts in France, and abounds in all

its productions except wine, but they supply that defect by cider, and perry. It contains iron, copper, and a great number of rivers and harbours. The Normans, a people of Denmark and Norway, having entered France under Rollo, Charles the Simple ceded this country to them in 912, which from that time, was called Normandy. Rollo was the first duke, and held it as a fief of the crown of France, and several of his successors after him, till William, the seventh duke, conquered England in 1066, from which time it became a province of England, till it was lost in the reign of king John, and reunited to the crown of France; but the English still keep the islands on the coast of Normandy. It now forms the departments of Calvados, Eure, the Channel, Orne, and Lower Seine.

It is situated in a district called Alvertonshire, on a small brook, which, a mile below, runs into the river Wisk. It is 30 miles N. N. W. of York, and 223 N. by W. of London. A good market on Wednesday for cattle, corn, &c. Fairs on Jan. 2, and on St. Bartholomew's day.

NORTHAMPTON, the county town of Northamptonshire, seated on an eminence, gently sloping to the river Nen, which is joined here by another rivulet, and has been made navigable to Lynn. It contains about 1083 houses, and 5200 inhabitants. Its principal manufacture is that of boots and shoes, of which many are made here, and in other parts of the county for exportation. Some stockings and lace are also made here. The horse-fairs of this place are reckoned to exceed all others in the kingdom. It is a handsome, well built town, and has a regular, spacious, market-place, one of the finest in England, a good free-school, and a county infirmary and gaol. Within half a mile of Northampton is a fine Gothic structure, called Queen's Cross, erected by Edward I. in memory of his queen Eleanor, who, at the hazard of her own life, had saved his, by sucking the poison from a wound which he received in the crusades. This town is a great thoroughfare both in the N. and W. roads, and is 50 miles W. of Cambridge, 30 S. E. of Coventry, and 66 N. W. by N. of London. Markets on Wednesday, Friday, and Saturday. Fairs on Feb. 20, April 15, May 4, August 5, and 26, Sept. 19, November 28, and December 19.

NORTHAMPTONSHIRE, a county of England, bounded on the N. W. by Leicestershire and Rutlandshire, on the N. by Lincolnshire, on the E. by the counties of Cambridge, Huntingdon, and Bedford, on the S. by Bucks and Oxfordshire, and on the W. by that county and Warwickshire. It is divided into 20 hundreds, containing a city, 13 market-towns, 336 parishes, about 25,000 houses, and 150,000 inhabitants. The air of this county is very healthy, except in the N. E. part near Peterborough, which being surrounded and intersected by rivers, is very liable to inundations, and forms the commencement of the fenny tract extending to the Lincolnshire Washes. With this single exception, Northamptonshire is, in a manner, proverbially regarded as a fine and pleasant county; an opinion, confirmed by the number of seats of the people of wealth which it contains. Its greatest defect is a scarcity of fuel: this is but scantily supplied by its woods, which, like those in all other parts of the kingdom, have been much diminished by agriculture; and though coal is brought into this county by the river Nen, it is at a very dear rate. Northamptonshire, however, possesses some considerable remains of it's old forests, particularly those of Rockingham on the N. W. and of Salcey and Whittlebury on the S. In this last, that fiercest of British animals of prey, the wild cat, is still found. There is but one piece of waste ground in this county, and that is a barren heath near Whittering. The products of this county are, in general, the same with those of other farming countries. It is, indeed, peculiarly celebrated for grazing land; that tract especially, which lies from Northampton northward to the Leicestershire border. Horned cattle, and other animals, are here fed to extraordinary sizes; and many horses of the large black breed are reared. Wood for the dyers is cultivated in this part; but the county is not distinguished for manufactures, excepting the trifling one of bone lace. The principal rivers are the Nen and Welland; beside which it is partly watered by the Ouse, Leam, Cherwell, and Avon. The county-town is Northampton.

NORTHOP, a town of Flintshire, with a market on Tuesday. It is 205 miles from London.

NORTHUMBERLAND, a county of England, receiving its name from being situated to the N. of the Humber. In the Saxon heptarchy it was a part of the kingdom of the Northumbrians, which contained not only the county now called Northumberland, but also Yorkshire, Lancashire, Durham, Cumberland, and Westmorland. It is seated in the extremity of England next to Scotland, and is bounded on the E. by the German Ocean, on the S. by the bishoprie of Durham, on the W. and S. W. by Cumberland, and on the N. W. and N. by Scotland, from which it is separated by the river Tweed. It extends about 70 miles in length from N. to S. and 50 in breadth from E. to W. and contains 12 market-towns, 460 parishes, and 100,000 inhabitants. The air is not so cold as might be imagined from the latitude in which it lies; for its situation between two seas, in the narrowest part of England, gives it the advantage of having the cold moderated by the temperate breezes of each; and for this reason, the snow seldom lies long in Northumberland, except on the tops of high hills; while in summer, from the same causes, excess of heat is seldom experienced, and many of the inhabitants enjoy health to a very great age. The soil is various; the eastern part being fruitful, having very good wheat and most sorts of corn, with rich meadows on the banks of the rivers; but the western part is generally barren, it being mostly heathy and mountainous. The S. E. parts abounds with pitcoal; the S. W. angle has very rich lead mines, but very little wood. This country is well watered by rivers, the principal of which are the Tyne, Tweed, and Coquet. Alnwick is the county-town; but the largest and richest is Newcastle.

NORTHWICH, a town of Cheshire, seated near the river Dane, is a handsome place, and chiefly noted for its salt-works. Vast pits of fossil salt rock have been dug here to a great depth, from which immense quantities are raised, partly to be purified on the spot by redissolving and boiling, and partly to be exported in its crude state. Most of the latter goes to Liverpool by the river Weeve. The clear annual duty received by government for Cheshire salt amounts

to 200,000£. Northwich is 20 miles N. E. of Chester, and 173 N. W. of London. Market on Friday.

NORTH-WIND, *s.* the wind that blows from the north.

NORTON, or CRIPPING-NORTON, a town of Oxfordshire, with manufactures for horse clothing and barrateens. It is situated on the great post road between Worcester and Oxford, 12 miles S. W. of Banbury, and 73 N. W. of London. Market on Wednesday.

NORWAY, a kingdom in the N. of Europe, the most westerly part of the antient Scandinavia. It is formed naturally into two neat divisions; namely, Northern and Southern, or Proper Norway, separated from each other by the small Swedish province of Herndahl. Northern Norway is a long and narrow slip of land, extending as far as Cape North, the most northern point of Europe, beyond 71. 0. deg. N. lat. and bounded on the W. and N. by the Northern Ocean; by Swedish and Russian Lapland on the E. and by Sweden on the S. It is divided into Nordland and Finmark, and comprehended in the government of Drontheim. Southern Norway is bounded on the N. and E. by Sweden, and on the S. and W. by the Northern Ocean. It is divided into the four governments of Aggerhuys or Christiana, Christiansand, Berghen, and Drontheim. From its rocky soil and northern position, Norway is not populous in proportion to its extent. Coxe has calculated the number of inhabitants to be 750,000, who, like the Swiss mountaineers, are exceedingly attached to their country. The horses are small, but strong, active, and hardy. In Norway they have a particular code, called the Norway Law, compiled by Grieffelfeld, at the command of Christian V. the great legislator of this country. By this law, the palladium of Norway, peasants are free, a few only excepted, on some aristocratic estates near Frederickstadt; and the benefits of this code are visible in the great difference, in their appearance, between the free peasants in Norway and the enslaved vassals of Denmark, though both living under the same government. The Norwegian peasants possess much spirit and fire in their manner; are frank, open, and undaunted, yet not insolent; never fawning, yet paying proper respect. The country does not yield corn sufficient for its inhabitants, but is exceedingly rich in pasture, and produces much cattle. There are large fisheries on the western coast, principally for the cod, the ling, and the whiting. The extensive forests abound with oak and pine, and with the birch, which not only supplies fuel, but a kind of wine which is produced by boring a hole in the trunk. The general exports of Norway are tallow, butter, salt, dried fish, timber, and planks, horses, and horned cattle, silver, alum, Prussian blue, copper, and iron. Norway abounds in lakes and rivers; the former so large that they appear like inlets of the sea; but the bays are so small that they appear like lakes. It was formerly governed by its own hereditary sovereign, but is now united to the crown of Denmark. The capital is Christiania.

NORWICH, an antient, large, and populous city of Norfolk, seated on the river Yare, which runs through it, and is navigable hence to Yarmouth, without locks. It has a stately antient castle, on a hill, which commands a fine view of the city: this castle is the shire-house for the county, and the county gaol; the assizes for the city being held at the Guildhall. Norwich has a good public library, a city and county hospital, a lofty market-house of free-stone, and a bridewell built of flints, remarkable for being beautifully cut into regular little squares, without any visible cement. It had formerly 58 parochial churches, besides monasteries; and has now 36 churches, beside the cathedral, chapels, and dissenting meeting-houses. It is computed that stuffs, such as damasks, camlets, black and white crapes, to the amount of 700,000£. have sometimes been manufactured here in a year. Norwich has 6 bridges over the Yare, about 8,800 houses, and 37,000 inhabitants. It is well supplied with provisions, and is 43 miles N. of Ipswich, and 109 N. E. by N. of London. Markets on Wednesday and Saturday.

NOSE, (*noze*) *s.* [*næse*, or *nosa*, Sax.] that part of a human body which is prominent in the middle of the face, and is the organ of smelling, and the emunctory of the brain. The end of any thing which is perforated or hollow. "The *nose* of a bellows." Scent, or the power of distinguishing or discovering by the smell. "We are not offended with a dog for a better *nose* than his master." *Collier*. *To lead by the nose*, signifies to drag by force, alluding to the manner of leading a bear, by means of a ring fixed to his nose; to have so much influence over a person as to make him do what you please. *To thrust one's nose into the affairs of another*, is to concern ourselves with the affairs of others without being invited, or to be officious, or a busy body. *To put one's nose out of joint*, is to deprive us of the affections of another.

It is a substance of an irregular figure, of a greenish brown colour, and somewhat transparent. It trembles at the touch like a jelly, but does not melt in the hand. It is found only in the summer months, and retains its perfect figure so long as it is a moist season, but immediately dries up and withers away when affected by the sun or wind.

NOT, *ad.* [*ne auht*, Sax, *niet*, Belg.] a particle used in denoting denial and refusal; in a negative proposition it is placed in the first branch, and is answered by *nor*. SYNON. *Not* barely expresses the negation; *no* strengthens, and seems to affirm it. The first often denies the thing in part only, or with limitation; the second denies it always absolutely, wholly, and without reserve. Thus we say, he has *not* money; he has *not* patience; meaning he is not overburdened with either; but when we say he has *no* money, he has *no* patience, we would be understood to say he has none at all. It is on account of this limitation that the word *not* is generally used in company with those words that mark either the degree, or quality, or quantity; such as *much*, *very*, *one*, and the like. There is *not*, commonly, *much* money to be found in the possession of men of letters. The major part of those who frequent divine service are *not very* devout. It often happens that he, who has *not one* single penny in his pocket, is *much* happier than many rich men.

refused to be paid, and in making protests on that account.

SYNON. *Notes* imply a shortness and precision; *remarks*, a choice and distinction; *observations*, something farfetched and critical.

To NOTE, *v. a.* [from *nota*, a mark, Lat.] to observe; to remark; to take notice of; to set down; to mention; to charge with a crime publicly. NOTTINGHAM, the county-town of Nottinghamshire, takes its name from the Saxon, Snottengaham, or House of Dens, so called from the spacious vaults dug in the rock, in which the antient Britons are supposed to have resided. It is pleasantly seated on a rocky eminence, above the meadows bordering the Trent; on the highest part of which stands the castle, a large, elegant, and noble palace, belonging to the duke of Newcastle, with a most extensive prospect. It is a large, populous, and handsome town, with a spacious market-place, and considered as one of the principal seats of the stocking manufacture, particularly of the finer kinds, as those of silk and cotton. It has also a manufactory of glass and coarse earthenware, and a considerable trade in malt. It is remarkable for its vaults or cellars, cut in the rock. It contains about 29,000 inhabitants, and is 16 miles E. of Derby, and 123 N. by W. of London. Markets on Wednesday and Saturday. Fairs on Friday after January 13th, May 7th, Thursday before Easter, and October 2d.

NOTTINGHAMSHIRE, a county of England, bounded on the N. by Yorkshire and Lincolnshire, on the E. by the latter county, on the S. by Leicestershire, and on the W. by Derbyshire. Its greatest length is 43 miles; its greatest breadth about 20. It is divided into 8 hundreds, and contains 13 towns, 168 parishes, and about 150,000 inhabitants. The principal rivers are the Trent and Idle. Almost the whole of the middle and western parts of the county were formerly occupied by the extensive forest of Sherwood, which is the only royal forest N. of the Trent; but the wood has in many parts been cleared, and the extent of the forest much contracted. The chief products of this county are corn, malt, pit-coal, of which there is great plenty; and a kind of stone somewhat like alabaster, but not so hard, which, when burnt, makes a plaster harder than that of Paris, with which the inhabitants generally plaster the floors of their upper rooms, instead of boarding them. Their other commodities are malt, wool, liquorice, wood, fish, and fowl. Their manufactures chiefly consist frame-work, knitting, glass, and earthen-ware. The principal town is Nottingham.

NO'VOGOROD, one of the most antient cities of Russia, in the government of the same name. It was formerly called Great Novogorod, to distinguish it from other Russian towns of the same appellation. It was, for a long time, governed by its own dukes; and was, in fact, a republic, under the jurisdiction of a nominal sovereign. It was the great mart of trade between Russia and the Hanseatic cities, and made the most rapid advances in opulence and population. Its territory extended to the N. as far as the frontiers of Livonia and Finland; comprising great part of the province of Archangel, and a large district beyond the N. W. limits of Siberia. But in the 16th century, this independent republic was obliged to submit to the arms of Ivan Vassilivitch I. grand duke of Russia. An enormous bell, denominated by the inhabitants *eternal*, and revered by them as the palladium of their liberty, was removed by their conqueror from Novogorod to Moscow. It continued, nevertheless, the largest and most commercial city in Russia, and contained at least, 400,000 people. It was first desolated, in a manner, by the cruelties exercised here by Ivan Vassilivitch II. but its splendour was not totally eclipsed until the Czar Peter built Petersburgh, to which favourite capital he transferred all the commerce of the Baltic that had before centered here. It now contains scarce 7000 people; but a vast number of churches and convents stand melancholy monuments of its former magnificence. The town stretches on both sides of the Volkoff, a beautiful river of considerable depth and rapidity, which separates into two divisions; namely, the Trading Part and the quarter of St. Sophia. Novogorod is situated near the lake Ilmen, 125 miles S. by E. of Petersburgh. Lat. 58. 20. N. lon. 32. 45. E.

Captain Cook, in the Endeavour, came hither, in 1769, to observe the transit of Venus, and visited it twice afterwards. It consists of two peninsulas, great part of which is covered with woods and forests, consisting partly of bread-fruit trees, palms, cocoa-nut trees, plantains, bananas, mulberries, sugar-canes, and others peculiar to that climate. The people have mild features, a pleasing countenance, and are gentle, good-natured and hospitable. The houses of the natives consist only of a roof, thatched with the long prickly leaves of the palm-nut trees, and supported by a few pillars made of the bread-fruit tree. The cloth of the natives is made of the fibrous bark of the mulberry-tree, which is beaten with a kind of mallet; and a glue, made of the hibiscus esculentus, is employed to make the pieces of bark cohere together. Some of these pieces are 2 or 3 yards wide, and 50 yards long. It is remarkable, that though the natives of this island far excel most of the Americans in the knowledge and practice of the arts of ingenuity, yet they had not invented any method of boiling water; and, having no vessel that could bear the fire, they had no more idea that water could be made hot, than that it could be made solid. The only quadrupeds found upon the island are, hogs, domestic dogs, and rats, which the inhabitants suffer to run about at pleasure, without ever trying to destroy them. Otaheite lies in about 18 deg. S. lat. and 150 deg. W. lon.

There are supposed to be about 150,000 inhabitants on this island. It was here, on Feb. 14, 1779, that the celebrated captain Cook fell a sacrifice to a sudden impulse of revenge in the natives, with whom he unfortunately had a misunderstanding or dispute. O'XFORD, the capital of Oxfordshire, is seated at the confluence of the Thames and Cherwell, on an eminence almost surrounded by meadows, except on the E. side. The whole town, with the suburbs, is of a circular form, 3 miles in circumference. It consists chiefly of two spacious streets, which cross each other in the middle of the town. The university is said to have been founded by Alfred, but is generally supposed to have been a seminary of learning before his time, although it owed its revival and consequence to his liberal patronage, receiving from him grants of many privileges and large revenues. About the middle of the 12th century, public lectures on the civil law were read here not more than ten years after a copy of Justinian's Institutes had been found in Italy. In the reign of Henry III. there were said to be 15,000 scholars, if they deserve that name, the sole object with many being only to read and write, while the greatest number attained to neither, and the most learned acquired only bad Latin and logic. Here are 20 colleges, and 5 halls, several of which stand in the streets, and give the city an air of magnificence, which remind the traveller of the antient cities of Greece and Rome. It is thought, that there is not such another group of buildings, nor such another university, at this day, in the world. The colleges are provided with sufficient revenues for the maintenance of a master, fellows, and students. In the halls, the students live, either wholly, or in part, at their own expense. Among the libraries in the university, the most distinguished is the Bodleian, founded by Thomas Bodley; those of All Souls College, Christ Church, Queen's New College, St. John's, Exeter, and Corpus Christi. Among other public buildings, are the Theatre, the Ashmolean Museum, the Clarendon Printing-House, the Radcliffe Infirmary, and a fine observatory. It is 20 miles S. W. of Buckingham, 40 S. W. of Bedford, and 58 W. by N. of London. Lat. 51. 45. N lon. 1. 10. W.

PIS the fifteenth letter, and eleventh consonant of our alphabet, and is formed by a slight compression of the anterior part of the lips, as *pull*, *put*, *pot*, and has nearly the sound of *b*. PALE'RMO, an antient, rich, and beautiful city of Sicily, in the Val-di-Mazara; situated near the extremity of a kind of natural amphitheatre, formed by high and rocky mountains; but the country that lies between the city and these mountains, is one of the richest and most pleasant spots in the world; the whole appearing a magnificent garden, filled with fruit trees of every species, and watered by clear fountains and rivulets, that form a variety of windings through this charming plain. From the singularity of this situation, as well as from the richness of the soil, Palermo has had

many flattering epithets bestowed upon it, particularly by the poets, who have denominated it the Conca d'Oro, the Golden Shell, which is at once expressive both of its situation and richness. It has likewise been styled Aurea Valle, Hortus Siciliæ, &c. The inhabitants of Palermo are estimated by Brydone at 150,000. Two great streets intersect each other in the centre of the city, where they form a handsome square, called the Ottangolo, adorned with elegant uniform buildings. From the centre of this square is seen the whole of these noble streets, and the four great gates of the city which terminate them. About a mile from Palermo is a celebrated convent of Capuchins, in which is a vault made use of as a receptacle for the dead. It consists of four wide passages, each about 40 feet in length, into which the light is admitted by windows at the ends. Along the sides of these are niches, in which the bodies are set upright, clothed in coarse garments, with their heads, arms, and feet bare. They are prepared for this situation by broiling them 6 or 7 months upon a grid-iron, over a slow fire, till all the fat and moisture are consumed. The skin, which looks like pale-coloured leather, remains entire, and the character of the countenance is in some degree preserved. It is, in general, a fertile country, abounding, where cultivated, with corn, wine, and oil; and it might supply the neighbouring country with all these, as it antiently did, were the present inhabitants equally industrious. PARAGUAY, a large country of S. America, bounded on the N. by Amazonia, on the E. by Brasil, on the S. by Patagonia, and on the W. by Chili and Peru. It contains 6 provinces; namely, Paraguay Proper, Parana, Guaria, Uraguay, Tucuman, and La Plata, from which the whole country is also called La Plata. It has numerous lakes and rivers. Of the latter, the 3 principal are the Paraguay, Uraguay, and Parana, the united streams of which form the celebrated Rio-de-la-Plata. These rivers annually overflow their banks; and, on their recess, leave them enriched by a slime, that renders the soil extremely fertile. This vast country is far from being wholly subdued, or planted by the Spaniards; many parts being still unknown to them, as well as to every other European nation. The principal province of which we have any knowledge is that which is called La Plata, toward the mouth of the river of that name. This province, with all the adjacent parts, is one continued plain for several hundred miles; extremely fertile, and producing cotton in great abundance, tobacco, and the valuable herb called Paraguay, which is peculiar to this country, and the infusion of which is drunk in all the Spanish provinces of S. America, instead of tea. They have also a variety of fruits, and very rich pastures; but the country has but few woods or forests. The air is remarkably sweet and serene. The Spaniards discovered this country, by sailing up the Rio-de-la-Plata in 1515, and founded the town of Buenos Ayres, on the S. side of the river. In 1580 the Jesuits were admitted into these fertile regions, where they afterward founded, at the commencement of the 17th century, and with the permission of Philip III. the famous missions of Paraguay; which were a number of colonies, each governed by two Jesuits, one of whom was rector, and the other his curate. They undertook not only to make preselytes to the church, but to open a new source of wealth to the mother country. To this end they represented, that they ought to be independent of the Spanish governors; and that as the vices of the Europeans might contaminate their new converts, and destroy the great objects of the

missions, no other Spaniards should be permitted to enter the country. To these terms the court agreed; they consenting to a certain capitation tax on the natives, and to some other stipulations in favour of the crown. In process of time, the Jesuits, by the most wonderful address and persevering patience, and without the least degree of force, acquired the most absolute dominion, both ecclesiastical and civil, over the natives, whom they even instructed in military discipline. The first of the missionaries, zealous and pious men, underwent the greatest hardships; and many of them were killed by the suspicious Indians, before they could allure their confidence, and convince them that they wished only to do them good. In 1757, the king of Spain exchanged the colonies on the E. shore of the river Uraguay for the Portuguese colony of St. Sacrament, which caused that river to become the boundary of the respective possessions of the two crowns. This produced an insurrection of the Indians, who were defeated by the Spanish governor, with the loss of 2000 of them killed. In 1767, the court expelled the Jesuits from S. America, and the natives, in course, were put upon the same footing with the other Indians of the Spanish part of that vast continent.

PA'RALLAX, *s.* [from *parallatto*, to differ, Gr.] with astronomers, is of several kinds. *Diurnal parallax*, is the difference between the true place of a celestial body as seen from the earth's centre, and its apparent one as seen from her surface. It is greatest of all in the horizon, and then called the *horizontal parallax*; but it decreases gradually as the body ascends above the horizon, called its *parallax in altitude*, till it vanishes in the zenith. The parallax of a star in a vertical circle changes its place with regard to the other circles of the sphere, and makes its visible longitude, latitude, and right ascension, different from the true ones; and hence arise what is termed *parallax in latitude, longitude,* or *right ascension*. The diurnal parallax always makes the object to appear lower than its true place; and according to the number of times the planet or star's distance from the earth is increased, so many times less will be the parallactic angle. The *parallax of the grand orb*, or *the annual parallax*, called by Ptolemy *prostaphæresis orbis*, and by Copernicus, *commutation*, is the angle under which the semidiameter of the earth's orbit appears, when viewed from a superior planet or star.

PA'RIS, the capital of France, one of the largest, finest, and most populous cities of Europe. The river Seine, which crosses it, forms 3 small islands, called the island of Louviers, the Notre Dame, and the Palace, which last is the antient city of Paris. The inhabitants are computed to be 800,000. It is 2 leagues in diameter, and 6 in circumference, including the suburbs. It is supposed to contain 875 streets, and 24,000 houses, among which are many of five, six, and even seven stories. There are nine principal bridges in Paris, two of which occupy the whole breadth of the Seine; namely, the Pont Neuf, and the ci-devant Pont Royal. The public fountains are very numerous, and on some of them is displayed very elegant sculpture. The public places, squares, &c. are also numerous and elegant, among which may be noticed the Place-de-Lewis XV. of an octagon form, in which was an equestrian statue, in bronze, of that monarch. This square, lately called the Place-de-la-Revolution, was the fatal scene of the execution of the unfortunate Lewis XVI. and afterwards of his unhappy consort, Marie Antionette, the former on the 21st of January, and the latter on the 16th of October, 1793. The cathedral of Notre-Dame, a Gothic structure, is one of the largest in Europe, and contains 45 chapels. The 4 principal palaces are, the Louvre, the Thuilleries, the Palais-Royal, lately called le Palais d'Egalité, and the Luxemburgh. The Louvre is distinguished into the Old and New. The Old Louvre was begun by Francis I. in 1528; and the grand gallery, 1362 feet long, and 30 broad, which joins it to the Thuilleries, was begun under Charles IX. and finished by Lewis XIV. who likewise built, in 1665, the New Louvre. But it is still an unfinished structure. The Thuilleries, begun in 1564 by Catharine de Medicis, continued by Henry IV. and completed by Lewis XIV. takes its name from its situation in a place in which were formerly many tile-kilns (*tuileries*) which, for three or four centuries, furnished the greatest part of the tiles used in Paris. The garden of the Thuilleries, in front of the palace, and on the banks of the Seine, is unquestionably the finest public walk in Paris. The Palais-Royal, in the interior, has been recently embellished with many beautiful buildings, with shops, coffee-houses, and a garden, which render it like a perpetual fair, and one of the most pleasing walks in the city. The gardens of the palace of Luxemburgh, also form a fine promenade. Before the revolution, Paris was the see of an archbishop, and contained 51 parish churches, 21 parochial, 17 collegiate churches; among which were 13 chapters, 40 chapels, 3 abbeys, 22 priories, and 50 convents for men, ecclesiastical and secular; 7 abbeys, 6 priories, and 53 convents for women; 12 seminaries, and 16 hospitals, 6 of which were appropriated to deserted children. Paris forms, with a small district round it, one of the departments of France, and is 245 miles S. E. of London, 625 N. W. of Vienna, and 630 N. E. of Madrid. Lat. 48. 50½. N. PAUL, ST. formerly named *Saul*, was of the tribe of Benjamin, a native of Tarsus in Cilicia, a Pharisee by profession; first a persecutor of the church, and afterwards a disciple of Jesus Christ, and apostle of the Gentiles. He was a Roman citizen, because Augustus had given the freedom of Rome to all the freemen of Tarsus, in consideration of their firm adherence to his interests. His parents sent him early to Jerusalem, where he studied the law under Gamaliel, a famous doctor. As to the manner of his conversion, and his indefatigable labours afterwards in propagating the gospel, we must refer the reader to the account given of him in the *Acts of the Apostles* and his own epistles. After St. Paul was delivered from his imprisonment at Rome, he proceeded in his travels, but to what part of the world is not certain; some say he went to Spain, and others, that he passed over to Britain. But however this be, he went a second time to Rome. Here he is made close prisoner, and tried for his life by Helius Cæsareanus, whom he calls *the lion*. This man, Nero, at his departure into Greece, had left invested with exorbitant powers, which he exercised after in as exorbitant a manner. At his trial he complains of Alexander the coppersmith's malice, and of being deserted by his friends; and presently after it, the second epistle to Timothy was written, in which there are several presages of his approaching martyrdom. This crown he obtained the year following, together with St. Peter, though not by the same kind of death; for St. Paul, as a Roman citizen, could not be crucified, and therefore was beheaded with a sword. His body was buried in the Via Ostiensis, near Rome, where a stately church was built, to the honour of his memory, by Constantine the Great, which was afterwards enlarged and beautified by order of the succeeding emperors.

The products of this country are timber for building, elephants, elephants' teeth, bees'-wax, stick-lac, iron, tin, petroleum, very fine rubies, and small diamonds. They have also saltpetre, and plenty of lead, of which they make their money. It is very fruitful in corn, roots, pulse, and fruits. The priests who are called Talapoins, observe celibacy, and eat but once a day. The city of Pegu, in 1600, was one of the largest and most populous in Asia, but being besieged in 1692 by the kings of Aracan and Tangue, the king was obliged to submit for want of provisions. Since that time Pegu ceased to be the royal city. It is still however, the seat of the viceroy, governing for the king, who resides at Ava. Lat. 18. 5. N. lon. 96. 42. E.

PE'KIN, the capital city of the empire of China, where the emperor generally resides. It is an exact square, and divided into two parts; namely, that which contains the emperor's palace, which is in the New City, or Tartar City, so called, because it is inhabited by Tartars, ever since they conquered the empire. The other, called the Old City, is inhabited by the Chinese. The gates of this city are high and well arched, supporting buildings of 9 stories high; the lowest of which is for the soldiers when they come off guard. The gates are 9 in number, and before each is an open space, which serves for a parade. The streets are as straight as a line, most of them three miles in length, and about 120 feet wide, with shops on both sides; but the houses are poorly built, and have only a ground floor. It is surprising to see what numbers of people there are in the streets, with vast numbers of horses, camels, mules, asses, waggons, carts, and chairs. All the riches and merchandise of the emperor are continually pouring into this city. There are always hackney horses, and chairs in various parts, which stand ready to be hired for a trifle. All the great streets are guarded by soldiers, who patrole night and day with swords by their sides, and whips in their hands, to chastise those who make any disturbance, or take them into custody. The little streets have lattice-gates at their entrance into the great streets, which are shut up at night, and guarded by soldiers, who suffer no assemblies in the streets at that time. The emperor's palace is of vast extent, and surrounded by a brick wall, with pavilions at each corner, encompassed by galleries supported by columns. This city is 20 miles in circumference, and the number of inhabitants is, at least, two millions; the walls are so high, that they cover the town, and are broad enough for several horsemen to ride abreast; and there are strong towers a bowshot distance from each other. The walls of the emperor's palace, including that and the gardens, are about two miles in length; and the architecture of the structures entirely different from that of the Europeans; they are covered with tiles of a shining, beautiful yellow. The temples, and the towers of this city, are so numerous, that it is difficult to count them. The country about it is sandy, and not very fruitful; yet provisions of all kinds are exceedingly plentiful, they being, as well as the merchandise, brought from other parts by means of canals cut from the rivers, and always crowded with vessels of different sizes.

PELA'GIANS, in ecclesiastical history, a sect who arose about the year 400, and denied original sin.

PE'LEW or PA'LOO ISLANDS, (so called on account of the vast number of palm trees which are seen on their coast, and appear like masts of ships at a distance, *palos* in Spanish, signifying a mast) are situated between 5 and 9 degrees N. latitude, and 130 and 136 degrees of E. longitude. They were, without doubt, first discovered by the Spaniards; but there is reason to suppose, that no European ever landed upon them before the crew of the Antelope, an English East India packet, commanded by Captain Henry Wilson, was wrecked there in the night between the 9th and 10th of August, 1783. The crew, to their unspeakable comfort, found the island peopled with a race who were simple in their manners, delicate in their sentiments, and exceedingly friendly in their disposition. The natives are of a deep copper colour, and wear no kind of clothing. The captain's brother was deputed to wait upon the king; and while he was before his majesty, he accidentally pulled off his hat, whereupon the king and the gazing spectators were struck with amazement, as if they imagined (and no doubt they did) that his hat formed a part of his head. They had not the least idea of the nature of powder and shot, and were greatly astonished when they beheld its effects. Captain Wilson, while in the territories of the king of Pelew, was invested by his majesty with the highest order of the bone. The king of the island entertained so good an opinion of the English, upon their departure, he permitted his

second son, prince Lee Boo, to accompany them in their voyage. The youth arrived with them in England, where in December, 1784, he died of the small pox. He was buried in Rotherhithe church-yard, where a monument was erected to his memory at the charge of the East India Company.

One part alone is mountainous, extending from the coast near Fishguard, to the borders of Carmarthenshire. This, however, yields good pasture for sheep, horned cattle, and goats, with which the country in general abounds; as also with wild fowls of various kinds, some of which are seldom seen in any other part of Britain. Sea, on the S. by Chili, and on the E. by a ridge of prodigious high mountains, called the Cordilleras-de-los-Andes, being about 1500 miles in length from N. to S. and 125 in breadth from E. to W. between the Andes and the S. Sea; but in other places it is much broader, and, according to some, 300 miles. It never rains in this country, and they hardly know what thunder and lightning are, unless towards the tops of the above mountains; all the tops of these mountains are covered with snow to a very great height, and there are several volcanoes, which burn continually. The best houses in this country are made of a sort of reeds like bamboo-canes, and covered with thatch, or palm-leaves. Peru is inhabited by the Spaniards, who conquered it, and the native Americans. These last, who live among the forests, form as it were so many small republics, which are directed by a Spanish priest, and by their governor, assisted by other original natives, that serve as officers. They have no distrust, for they leave the doors of their huts always open, though they have cotton, calibashes, and a sort of aloes, of which they make thread, and several other small matters which they trade with, and which might be easily stolen. They go naked, and paint their bodies with a red drug, called rocu. Their skins are of a red copper colour; and they have no beards nor hair on any part of their bodies, except their heads, where it is black, long, and coarse. Those that are not much exposed

to the weather are of a lighter color than the rest. They have a great number of fruits, plants, and trees, not known in Europe; however, some of their physical drugs are brought over, which are of excellent use, and are well known in druggists' shops, particularly the Jesuit's bark, and Peruvian balsam. This country is divided into five great audiences.

PE'TER, St. As it is not necessary to recite, we therefore omit, so much of the history of this great apostle as is related in the Gospels and the Acts, and shall only mention what is said of him by profane authors. The particulars of St. Peter's life are little known, from the 51st year of the vulgar era, in which the council of Jerusalem was held, till his last journey to Rome, which was some time before his death. Being soon thrown into prison, it is said he continued there nine months; at last he was crucified at Rome, in the Via Ostia, with his head downwards, as he himself had desired of his executioners; this he did out of humility, as thinking it too great an honor to suffer in the same manner as his master Christ had done. His festival is celebrated with that of St. Paul on the 29th of June. St. Peter died in the 66th year of the vulgar era, after having been bishop of Rome, (as some writers affirm) 24 or 25 years. His age might be about 74 or 75 years.

Trade flourishes greatly here, because it is the seat of the emperors, and because foreigners have the same privileges as the natives of the place. All religions are tolerated, and there are packet-boats, by which intelligence is conveyed to different places. The inhabitants also carry on a trade with the Chinese and Persians. They have woollen and linen manufactures here, paper-mills, powder-mills, places for preparing salt-petre, brimstone, and laboratories for fireworks. Here are also yards for making ropes, cables, and tackling for ships; a foundery, where cannon and mortars are cast; as also a printing-house. Some streets of this city are regular and well-built; and among the most elegant structures may be reckoned the great chancellor's house, that of the vice-chancellor, and some others. They are mostly brick, plastered over; and though the climate is so very cold, yet they have more windows than they generally have in England. There are 20 Russian churches, and 4 Lutheran, besides those of the Calvinists, Dutch, English, and Roman Catholics; and the number of inhabitants are now reckoned at 126,700, most of whom came to settle here from other countries, there being not many original Russians among them. is, from the Delaware to the Schuylkill, upon the original plan, is 10,300 feet, and the breadth N. and S. is 4837 feet. Not two-fifths of the plot covered by the city charter, are yet built upon. The circumference, however, of that part of the city which is built, if we include Kensington on the N. and Southwark on the S. is about 5 miles. Market Street is 100 feet wide, and runs the whole length of the city from river to river. Near the middle of it, it is intersected at right angles by Broad Street, 100 feet wide, running nearly N. and S. quite across the city. Between the Delaware and Broad Street, are 10 streets, nearly equidistant, running parallel with Broad Street; and between Broad Street and the Schuylkill, are 9 streets, equidistant from each other. Parallel to Market Street are 8 other streets, running E. and W. from river to river, and intersecting the cross streets at right angles. All these streets are 50 feet wide, except Arch Street, which is 65 feet wide, and all the streets which run N. and S. except Broad Street, are also 50 feet wide. There are 4 squares of 8 acres each, one at each corner of the city, originally reserved for public uses; and in the centre of the city, at the intersection of Market Street and Broad Street, is a square of 10 acres, reserved in like manner, to be planted with rows of trees for public walks. Most of the houses have a small garden and orchard; and from the river are cut small canals, equally agreeable and beneficial. The wharfs are also fine and spacious; the warehouses large, numerous, and commodious; and the docks for ship-building well adapted to their purposes. This city was founded in 1682, by the celebrated William Penn, a Quaker, who, in 1701, granted a charter, incorporating the town under the government of a mayor, recorder, 8 aldermen, 12 common-council men, a sheriff, and a clerk. In 1792, Philadelphia contained 5000 houses, in general handsomely built of brick, and about 40,000 inhabitants. The state house is a magnificent building, erected in 1735. PO'LAND, formerly a large kingdom in Europe, bounded on the W. by the Baltic Sea, Brandenburgh, and Silesia; on the S. by Hungary, Transylvania, and Moldavia; and on the N. and E. by the dominions of Russia. The affairs of the kingdom were for some years in a very distracted situation. Various disturbances took place soon after the election of the late king Stanislaus, in the year 1764, and almost a civil war, which was the occasion of introducing the troops of Russia, Prussia, and Austria. The partition of Poland was first projected by the king of Prussia. Polish or Western Prussia, had long been an object of his ambition; it lay between his German dominions and Eastern Prussia, and, while possessed by the Poles, cut off, at their will, all communication between them. By political management he brought over Russia and Austria to his scheme. By the first dismemberment, in 1772, the portion taken by Russia was the largest, the Austrian the most populous, and the Prussian the most commercial. The population of the whole amounts to near five millions of souls. Western Prussia was the greatest loss to Poland, as the navigation of the Vistula was made to depend entirely on the king of Prussia. In the year 1793, a second partition took place. Some attempts were made by a few patriotic noblemen to deliver their country from their oppressors, and they were at first successful; but their commander, the brave Kosciusko, being taken prisoner, and his army defeated, no farther efforts were made. Kosciusko was carried to Russia, and kept in prison until the late emperor Paul came to the throne, when he was liberated, and arrived in England in 1797, from whence, after a very short stay, he sailed for America. The king of Poland resigned his crown at Grodno, in the year 1795. After that the country underwent a farther partition, till it was entirely swallowed up by the rapacity of the dividers of the spoil. Poland therefore remained a country indeed, but no nation; and the indignant Pole, in reviewing its past history and present state, might exclaim with a sigh, "Such things *were*."—The air is generally cold, and they have but little wood; however, it is so fertile in corn in many places, that it supplies Sweden and Holland with

large quantities. There are extensive pastures, and they have a large quantity of leather, furs, hemp, flax, salt-petre, honey, and wax. They have also some mines of lead, iron, quicksilver, vitriol, and sulphur. There are three universities at Cracow, Wilna, and Posen; two archbishopries, and fifteen bishopries. The principal rivers are the Nieper, the Vistula, the Bug, the Niemen, the Neister, and the Bog. Cracow is the capital town, but Warsaw was the general residence of the king. —*N. B.* The year 1807, eventful in political changes, effected also a partial revolution in Poland, afforded a striking instance of the instability of that dominion which is acquired by perfidy and violence! Prussia, the spoiler of Poland, has herself severely felt the hand of retributive vengeance; for among the sacrifices which the Prussian monarch has been compelled to make to the French emperor, to purchase the return to his own kingdom and capital, has been the surrender of those very provinces which had been at different time so unjustly wrested from Poland! These have been annexed to the kingdom of Saxony, under the title of the duchy of Warsaw.

In natural history, an animal with many feet, approaching very near to a vegetable, which, when cut into pieces, supplies by growth, every part with those members it wants to make it a complete animal. The production of its young is different from the common course of nature in other animals; for the young one issues from the side of its parent in the form of a small pimple, which, lengthening and enlarging every hour, becomes in about two days, a perfect animal, and drops from its parent to shift for itself; but before it does this, it has often another growing from its side; and sometimes a third from it, even before the first is separated from its parent. It is not easy to say what is the size of this creature, for it can contract or extend its body from the length of an inch and the thickness of a hog's bristle, to the shortness of the twelfth part of an inch, with a proportionable increase of thickness. Its body is round and tubular, at one end of which is the head, surrounded with six, eight, ten, or more arms, with which it catches its prey, and at the other the tail, by which it fixes itself on any thing it pleases. Many different species of polypuses have been discovered, all of which are found in clear and slowly running waters, adhering by the tail, to sticks, stones, and water plants. POPE, the Territories of, in Italy. It is commonly called the Territory of the Church, and depends upon the holy see. the pope being lord both in spirituals and temporals. It is about 400 miles in length on the coast of the Adriatic Sea, from the kingdom of Naples to the territory of Venice It is more narrow from N. to S. being not above 80 miles in breadth from the Gulph of Venice to the Tuscan Sea. The pope's territories are divided into 12 provinces, which are separated by the Appenine Mountains, some being to the E. and some to the W. of them; their names are as follow; the campagna di Roma, the provincia del Patrimonia, the duchy of Castro, the province of Orvieto, the Perugino, the duchy of Speleto, the province of Sabina, the marche of Ancona, the duchy of Urbino, Romagna or Romandiola, the Bolognese, and the Ferrarese. The pope is a sovereign prince, but not content with that, pretends to be the vicar of Jesus Christ upon earth. His ministers of state in church affairs are 70 cardinals, being the number of the 70 disciples of our Saviour. These cardinals elect the pope, which election is determined by the plurality of voices; but then he that is chosen must have two-thirds of the votes, for fear of a schism. Formerly when the pope died, the cardinals were liable to be solicited to follow the views of particular persons, which caused the election to be put off for a long time; but they have now remedied this inconvenience, and have built a palace for that purpose, called the Conclave. Therefore, as soon as the pope is dead, the cardinals are obliged to repair thither immediately, and to continue shut up till they have chosen another. The election of the new pope is immediately followed by his coronation; and this ceremony is performed in the Lateran church, where they put a triple crown on his head. The provinces which depend on the holy see are governed by legates; but, besides the 12 above mentioned, there is one at Avignon in France, and another at Benevento in the kingdom of Naples. There are few countries where the pope has not ambassadors, who are called Nuncios; there is generally one at Vienna, Paris, Lisbon, Madrid, Warsaw, Swisserland, Venice, Brussels, and Cologne; and these nuncios are cardinals. They have

the title of Legates a Latere. The title given to the pope is His Holiness, and the cardinals have that of Eminence. It has been computed, that the common revenue which the pope receives amounts to above 20 millions sterling. The Roman Catholic religion is the only one allowed throughout the pope's dominions. The pope's guards consist of Swiss, who are all tall and robust. The soldiers who patrole through the city every night are called Barries, and the chief Barrigello. The pope's relations are called his nephews, and the custom of enriching them is called nepotism.

The above account we have retained as a matter of historical curiosity. The popedom, however, has long ceased to exist in the state above described. The successes of the French Republic in Italy forced the late pontiff into an exile, in which he ended his life. And though his successor was restored to a degree of secular power by the present government of France, and the Romish religion re-established in that country; yet Buonaparte has since deprived the pope of all his territory, because he refused to declare war against England, and under a pretext that the States of the church had been granted by Charlemagne for the prosperity of the Roman religion, and not for the assistance of heretics! He has, however, lately (1813) been reconciled with the French emperor.

The principal branch runs up to Fareham; a second to Portchester; and a third to Portsea Bridge. Besides these branches, there are several rithes, or channels, where the small men of war ride at their moorings. Opposite the town is the spacious road of Spithead, where the men of war anchor when prepared for actual service. PO'RTUGAL, the most western country of Europe, about 310 miles in length, and 150 in breadth. It is bounded on the W. and S. by the ocean, and on the E. and N. by Spain. Though Spain and Portugal are in the same climate, yet the air of the latter is much more temperate than that of the former, on account of the neighbourhood of the sea. Corn is not very plentiful in this country, because the inhabitants are not much addicted to husbandry; for this reason they import Indian corn from Africa, which is made use of by the peasants instead of wheat. There are a great number of barren mountains, and yet they have plenty of olives, vine-yards, oranges, and lemons, as also nuts, almonds, figs and raisins. They have some horned cattle, whose flesh is generally lean and dry. The principal rivers are, the Tagus, the Duero or Douro, the Guadiana, the Minho, and the Munda, or Mondego. Portugal is divided into six provinces, namely, two in the middle, called Estremadura and Beira; two on the N. which are Entre Minho é Douro and Tralos-Montes; also two on the S. called Alentego and Algaw. The principal business of the Portuguese is trade. The government is monarchical; but the authority of the king is bounded by the fundamental laws of the kingdom, for he cannot raise any more taxes than were settled in 1674, nor can he appoint a successor when there is any failure in the royal line. No other religion is allowed here but the Roman Catholic. In 1580, there was a failure in the royal line, and Philip II. of Spain got possession of the throne; in 1640 there was a revolution, and John Duke of Braganza obtained the crown, whose descendants enjoyed it till Nov. 1807, when the French government, having decreed that the House of Braganza should reign no longer, sent an army to occupy the country; on which the prince-regent, with a number of his adherents, sailed to the Brazils. PRU'SSIA, a large country of Europe, bounded on the N. by the Baltic and Samogitia, on the E. by Lithuania, on the S. by Poland, and on the W. by Pomerelia; about 180 miles in length, and near 100 in breadth, where broadest. It is a very fertile country, producing a great deal of flax, hemp, and corn; and the sea, rivers, and lakes, supply them with great plenty of fish. Prussia also abounds with flocks and herds, and fine horses. Its chief commodities are wool, honey, wax, pitch, pit-coal, hops, and buck-wheat. Here is plenty of game; as, white and common hares, elks, deer, roe-bucks, and wild boars; but the forests are, at the same time, infested with lynxes, wolves, foxes, bears, wild asses, and uri, a species of buffalo. The hides of these last, which are extremely thick and strong, are sold to foreigners at a great price. Here is neither salt, wine, nor minerals, but yellow amber (for the sake of procuring which the Romans penetrated into and subdued this country) is found in great quantities on the Samland shore. There are several large lakes, besides the rivers Vistula, Pregel, Memel, &c. About 4 months of the year are temperate, warm, and pleasant; but the autumns are often wet, and the air in winter is cold, piercing, and severe. The manufactures in glass, linen, cloth, metals, &c. are rapidly increasing. The inhabitants are a mixture of native Prussians (who appear to be genuine Germans) Lithuanians, and Poles. The Teutonic order had sovereignty in Prussia about 300 years; after which Prussia was added to the dominion of the electoral house of Brandenburgh, and in 1704 it was raised to a kingdom by the elector Frederick, who, with his own hands put the crown on his head, and on that of his consort, at Koningsburgh. Prussia is divided into three parts, Samland, Nantangen, and Oberland. Koningsburgh is the capital.

These surprising monuments of antiquity, which baffle the researches of the deepest antiquary to fix their origin with precision, are built upon a rocky bottom, at the foot of the high mountains which run along the antient course of the Nile, and separate Egypt from Lybia. Various have been the conjectures how and when they were built, yet no two authors agree exactly about them; however, this is certain, that they are extremely antient, and that there is no account in any author of credit, when or for what reason they were founded; most imagine they were designed for tombs, though there is no discoverable entrance into two of them. There are many of these edifices at a greater distance in the desert, of which very little notice is taken by travellers. The principal pyramids are E. S. E. of Gize, a village on the Western shore of the Nile. Q.

QIS a consonant, the sixteenth letter of the English alphabet, called *keu*, from the French *queue*, or tail, it being as O with a tail to it. The *q* is never sounded alone, but in conjunction with *u*, as in *quibble*, *quarrel*, *quiet*, *quote*, &c. and never ends any English word. As a numeral, Q stands for 500; and with a dash over it thus, $\bar{Q}$, for 500,000. Used as an abbreviate, *q* stands for quantity, or quantum. Thus, among physicians, *q. pl.* is *quantum placet*, as much as you please; and *q. s. quantum, sufficit, i. e.* as much as is necessary.—Q. E. As they believe that the aid of the Spirit is most effectually sought in silence of mind, they do not so generally as other Christians celebrate their worship aloud by preaching and prayer, but wait till they deem themselves moved by the Spirit of God before they enter on any ministerial exercise. Its principal town, of the same name, is still a place of note. This island was greatly famed for the fineness of the weather, but more for the colossus, or image of Apollo, which was fixed at the mouth of the harbour at Rhodes, so that ships sailed between the legs of it. RICHARD I. (surnamed Cœur-de-lion) Richard staid above a month in France, after his father Henry II's death, so well was he assured of the disposition of the people of England, and that nothing would be attempted there to his prejudice; though in his father's life-time he had, or pretended to have, some fears and jealousies on account of his brother, prince John. The first thing he did was to have an interview with Phillip; when he thanked him for his late protection, and did homage to him for his French provinces. On the 20th of July, 1189, he received the ducal crown of Normandy at Roan, and was girt with the ducal sword, according to the custom of investiture. The first order he sent to England, where he was obeyed as if he had been already crowned, was to set his mother queen Eleanor at liberty, who had been 16 years in confinement. He also entrusted her with the administration during his absence, and empowered her to release what prisoners she pleased; who was too sensibly affected with her long confinement, not to exercise with pleasure this power given her by her son; who having settled his affairs in France, came to London, and was crowned by Baldwin, archbishop of Canterbury, on Sept. 3, 1189. The ceremony was disturbed by the massacre of some Jews, who, pressing to see the solemnity, the people fell furiously upon them, and killed several of them. But the king having caused a strict inquiry to be made, some of the ringleaders in this barbarous action were deservedly put to death. It must be observed, that ever since the taking Jerusalem by the Saracens, the people breathed nothing but revenge against the enemies of Christ; and this made them take this opportunity of falling upon the poor Jews, though they had no hand in that revolution in Palestine. Their not being Christians was enough: and the cruel example of the Londoners was followed by several other great towns, especially at York, where 500 Jews, besides women and children, having fled into the castle to avoid the fury of the rabble, the high sheriff required them to deliver it up; and upon their refusal, the people drew up in a body, and attacked the castle. The Jews offered a great sum of money to go off with their lives, but, notwithstanding, the people would give them no quarter. And so, rather than fall into the hands of the uncircumcised Christians, every master of a family cut his wife's and children's throats first, then dispatched his servants, and ended with the slaughter of himself. A new crusade for the recovery of Jerusalem from the Infidels, had been resolved between Philip of France and king Henry, in which Richard was to bear a part; but their private quarrels had put a stop to the undertaking. And now Philip and Richard being in perfect amity, they resumed the design according to both their vows. King Richard's thoughts were wholly taken up with this affair from his very accession; whether for the sake of glory or religion, let the reader judge. As he designed to make as great a figure as possible in this expedition, it was necessary he should carry with him a numerous army; to maintain which, he stuck at no methods to raise money. Besides the late king's treasure, amounting to above 100,000 marks, which he wholly applied this way, he sold almost all the crown lands, of which the bishops and abbots were the chief purchasers. For 10,000 marks he delivered up Berwick and Roxborough to the king of Scotland, and discharged him and his successors from the homage his father had imposed. When complaints were made to him for these measures, he said, he would sell London itself, could he find a chapman able to purchase it. He got a power from the pope to dispense with those who repented of their vow, as having too hastily engaged in the crusade; and as there were many of this sort, he raised great sums by this means. He also extorted money from the richest of his subjects, by borrowing of those against whom he could have no handle, and laying such as had any ways made themselves obnoxious, under a necessity of saving themselves harmless by making him presents. Whilst he was by these and other methods heaping up money, the clergy did all they could to procure him soldiers, and the army soon became very numerous. Having made these extraordinary preparations for his voyage, he gave the regency, during his absence, to Longchamp, his high chancellor, who was also bishop of Ely, and the pope's legate, joining with him the bishop of Durham. As to his brother prince John, he would not let him have any share in the government, for fear of giving him an opportunity to act against him: but, to make him easy, he invested him with the earldom of Cornwall, Dorset, Somerset, Nottingham, Derby, and Lancaster; and gave him in marriage Avisa, heiress of the house of Gloucester, his second cousin. All things being settled, king Richard passed over into France about the beginning of the year 1190, and the two armies of France and England, making together above 100,000 men, joined at Vezelai towards the end of June, according to agreement. The two monarchs marched together as far as Lyons, where parting, Phillip proceeded for Genoa, and Richard for Marseilles, to meet his fleet; both being to join again at Messina, in Sicily, the general rendezvous of the Croises. Philip soon arrived there; but Richard, (whose fleet had been separated by a storm, and were sometime before they joined again,) not till towards the end of September. Here a quarrel soon arose between Richard and Tancred, king of Sicily, who having detained the queen dowager, Richard's sister, in prison, set her at liberty on his arrival, and sent her to him. But Richard not satisfied with this, demanded the dower assigned her by William II. her husband. Tancred being very backward to comply with this demand, Richard seized on a castle and monastery near Messina, and Tancred in return ordered matters so, that the inhabitants of Messina, taking the advantage of some disorder there, expelled the English out of their city. Richard, enraged at this, attacked the city with such fury, that he

became master of it the first assault. Upon this Tancred thought fit to satisfy all Richard's demands, and a treaty was concluded between them. But as nothing but force had brought Tancred to comply, he now endeavoured to sow dissention between Richard and Philip. The latter had already looked with a jealous eye on Richard's visible superiority, and was of himself too much disposed to fall out with him. Both sides being exasperated, Philip peremptorily demanded of Richard to consummate his marriage with the princess Alice, his sister; and Richard as peremptorily refused it, saying, he could not marry a princess, by whom the king his father had had a son, offering to prove it by witnesses; and though this point, being of so tender a nature, was dropt, yet this and some other disputes had so exasperated their minds, that they were never more friends. However, this did not hinder them from pursuing their voyage. Philip set sail first about the end of March, 1191, Richard staying for the arrival of Eleanor, his mother, who was bringing along with her Berenguella of Navarre, whom he had espoused. They soon arrived, and Eleanor returning home, leaving Berenguella with the queen dowager of Sicily, king Richard put to sea with a gallant fleet, about a fortnight after Philip's departure, taking the two princesses along with him. This fleet met with a violent storm between Cyprus and Rhodes, which drove part of them on the coast of Cyprus; where Isaac, king of the island, a prince of a very bad character, imprisoned the English that had escaped the shipwreck, and seized their effects. King Richard, provoked at this barbarity, as soon as the scattered fleet was joined, landed his men, and attacked Isaac so furiously, that he was forced to abandon the shore. The king of England pursuing this advantage, with ease made himself master of the city of Limisso; and soon after Isaac and his only daughter were made prisoners. He entreated king Richard not to put him in irons; who granted his request so far, that instead of iron, he ordered him to be bound with silver fetters. The conquest of the whole island soon followed, which Richard gave some time after to Guy of Lusignan, the last king of Jerusalem, whose family enjoyed it near 200 years. Before Richard left Cyprus, he consummated his marriage with the princess Berenguella. Whilst the king was making himself famous by these great actions abroad, Longchamp, the regent, abused his power at home to such a degree that his colleague, the Bishop of Durham, and the six counsellors the king had appointed to assist them, complained to prince John, and got him to join with them in order to depose him; which they effected, and conferred the regency on the archbishop of Roan, till the king's pleasure should be known. John was glad of this opportunity of having a hand in the administration, and improved it so as to make a strong party for the crown, in case his brother died during his expedition, in prejudice of his nephew Arthur, duke of Bretagne, son to his elder brother Geoffrey. To return to the affairs of Palestine: Acon, or Ptolemais had been besieged by some Christian princes a whole year. When Philip of France arrived, he continued the siege, but with little success. King Richard arrived afterwards, and carried it on so vigorously, that, in spite of all the attempts of the sultan Saladin to raise it, the city at length surrendered upon articles, July 12, 1191. And now the Christian army expected to march towards Jerusalem; but the dissention between the two kings, which broke out afresh, occasioned chiefly by Philip's envying Richard's glory, and the superiority he had obtained by the number and good condition of his troops, and his personal valour proved an obstacle to the design. Philip finding himself very weak after a violent fit of sickness, and being impatient to go and take possession of Artois, which was fallen to him by the death of the earl of Flanders, quitted Palestine, and returned home, leaving 10,000 of his men under the command of the duke of Burgundy. Soon after his departure, Richard and Saladin exhibited a spectacle of horror, by putting the prisoners to death each had in his power, which were some thousands. This was occasioned by Saladin's refusing to perform the articles of the surrender of Acon, upon which Richard is thought to have begun with beheading the Turkish prisoners, and Saladin, by way of reprisal, did the same by his Christian captives. After this, Richard resolved to besiege Ascalon; and as he was marching towards it with that design, Saladin posted himself advantageously in the way, with an army of 300,000 men. Here a great battle ensued, which was fought on Sept. 7, 1191. Richard attacked the Saracens, so much superior to him in number, with such undaunted valour and resolution, that he in the end entirely defeated them, leaving 40,000 dead on the field of battle. After which he repaired the maratime cities of Ascalon, Joppa, and Cæsarea, which Saladin had abandoned, after having demolished their walls. Then he marched towards Jerusalem, and in his way took the great Babylon caravan, consisting of 3000 loaded camels, and 4000 horses or mules, and guarded by 10,000 horse. By this capture he made himself master of an inestimable booty. After which he continued his march towards Jerusalem, and from a hill had a prospect of the city; but want of forage obliged him to put off the siege. In the mean time, the duke of Austria, with the Germans, and the duke of Burgundy with the French, deserted him, and the Italian troops under the marquis of Montserrat refused to serve any longer. These things, together with the diminishing of his own troops by sickness and battles, the fear of Philip's attacking his dominions in his absence, and the news of what his brother John was doing in England, made Richard resolve to return home. But before his departure, he caused Henry, earl of Champaign, to be elected general of the forces that were to be left behind in Palestine, and concluded a truce with Saladin for three years. Thus ended the famous crusado, which drained England and France of men and money, and after all proved of but very little advantage to the eastern Christians. Richard embarked for England towards the end of the year 1192, and meeting with a storm, was forced on the coast of Istria, and from thence between Aquileia and Venice. Whether by mistake, or otherwise, he entered the territories of the duke of Austria, whom he had affronted at the siege of Acon, and took the road to Vienna. Though he travelled in the disguise of a pilgrim, as did also his attendants, he was however at last accidentally discovered to the duke of Austria, and siezed at a village near Vienna. The emperor Henry VI. demanded this royal prisoner of the duke, who delivered him up, upon assurance given him that he should have a good share in his ransom. The news of the king's imprisonment quickly reached England, and caused the greatest consternation among his friends, whilst prince John took this opportunity to endeavour to wrest the crown from his brother, but was prevented by the diligence of the queen his mother, and the barons, who preserved their fidelity to their imprisoned sovereign. Finding he could not make a sufficient party in England, he went over to Normandy, and failing also in his attempts there, he applied to the king of France, and made a treaty with him. Philip, glad of any pretence to embroil Richards affairs, resolved to sieze on the provinces he held in France. He made himself master of Gisors, Eureux, and the country of Vexin, and laid siege to Roan; but he failed in this last attempt, being repulsed with great loss, and forced to abandon the siege. In the mean while queen Eleanor left no stone unturned to procure the liberty of the king her son, whilst Philip and John did all they could to prevail with the emperor to keep him still a prisoner. Eleanor at last had her desire, chiefly by means of the German princes, who vigorously espoused the cause of the unfortunate king before the emperor; and so Richard was set at liberty upon paying down 100,000 marks of pure silver, which the queen his mother raised in England for that purpose, and giving hostages for the payment of 50,000 more. The king was no sooner released, but he set out with all speed for the Low Countries, and embarking at Antwerp, arrived at Sandwich, on the 20th of March, 1194, after having been absent from England four years, of which he had been fifteen months a prisoner.

Richard was received with great demonstrations of joy by his subjects, but he did not make any long stay in England. For having reduced the few castles that were still in the hands of John's adherents, and causing himself to be crowned a second time, he passed over into France with a considerable army, to be revenged on Philip for his late insults, and for encouraging the rebellion of his brother John. At the instance of his mother, he was reconciled to prince John, at Roan, upon his making his submission; but a war commenced between the two kings, the particulars of which are but of small moment, neither of them gaining much advantage over the other. Whilst Richard was in France, a great sedition was raised in London, by one William Fitz-Osburn, commonly called Longbeard, on account of a tax, which he alleged would fall wholly on the poor, with whom he had gained great credit by affecting always to appear an advocate for them. The tumult could not be appeased without the citizens taking to arms. In the end Longbeard was taken and hanged, with nine of his accomplices. The lower class of people, when he was dead, began to revere a man that they had not spirit to relieve. They stole his gibbet, and paid it a veneration like that offered to the wood of the cross. The turf on which it stood was carried away, and kept as a preservative from sickness and misfortune; and had not the clergy withstood the torrent of popular superstition, his memory might have received honours similar to those paid at the shrine of St. Thomas of Canterbury. About this time lived the famous Robin Hood, and his associate Little John, who with their gang are said to have infested Yorkshire with their robberies. Some say he was of noble descent, and was reduced to these courses by his riot and extravagance. He never hurt any person, robbed only the rich, and spared the poor. A proclamation being issued against him, he fell sick at the nunnery of Berkeley, and desiring to be let blood, was betrayed, and bled to death. Richard, after the truce he had made with France, might have enjoyed some repose after his many fatigues, if his avarice had not put him upon an action which occasioned his death. A gentleman of Limosin, which was held of the duchy of Guienne, having found a treasure that had been hid for some ages in his grounds, Richard pretended it belonged to him as sovereign of the country. The gentleman would have given him a part; but finding the king was resolved to have the whole, he applied for protection to Vidomer, viscount of Limoges, who sheltered him in the castle of Chaluz. Richard marched into the Limosin, to lay siege to the castle. But as he was taking a turn round in order to view it, one Bertram, an archer, let fly an arrow at him from the walls, which shot him in the shoulder close to his neck. The wound, under the management of an unskilful surgeon, gangrened, so that he died of it eleven days after he received it, viz. on the 6th of April, 1199. The castle being taken before he died, and the person who shot him brought before him, he asked why he did it. The man boldly replied, it was to revenge the death of his father and brother, whom the king had slain, and that he was glad he had rid the world of one who had done so much mischief. The dying king forgave him, and ordered him his liberty, with a present of 100 shillings. But as soon as the king was dead, Marchal, general of the Flemings, caused the miserable man to be flayed alive. Thus fell king Richard, in the 10th year of his reign, and 48th of his age. Before he died he made his will, leaving his kingdom and his other dominions to his brother John, and ordered his body to be buried at Fonteverard, at the feet of the king his father, to testify his grief for his undutiful behaviour towards him. He left only a natural son, whose name was Philip, to whom he gave the lordship of Cognac in the duchy of Guienne. He was certainly a prince of an intrepid and dauntless spirit, of unquestionable valour and courage, whence he was surnamed Cœur de Lion, or Lion's Heart. If those who have written his life have not misrepresented him, pride, avarice, and lust, were his reigning vices. It is said, that a certain priest once took the freedom to admonish him to put off those ill qualities, which were usually called his three daughters. The king told him he had been thinking to do so, and would give the first to the templars, the second to the monks, and the third to the bishops. He imposed exorbitant taxes on his subjects, and extorted large sums from them by unjustifiable methods. During his whole reign, he never was above eight months in England, which doubtless was unhappy under his government. Richard was the first king of England who bore three lions passant in his arms. He ordered that weights and measures should be the same all over the kingdom. It was during the crusades, that the custom of wearing coats of arms was first introduced into Europe. The knights, cased up in armour, had no way to make themselves known and distinguished in battle, but by the devices on the shields; and these were gradually adopted by their posterity and families, who were proud of the pious and military enterprises of their ancestors. King Richard was a passionate lover of poetry; and there even remain some poetical works of his composition. In his reign the city of London began to assume a new form with respect to its government, to have a mayor, and to be divided into several corporations or societies, now termed companies. Henry Fitz-Alwin was the first mayor, who continued in that office 24 years.

RICHARD II. Upon the death of Edward III. his grandson Richard, son of the Black Prince, succeeded to the crown. He was born at Bourdeaux, and was now about 11 years old. He had three uncles, who might upon specious pretences have disputed the succession with him; but they were so far from endeavouring to supplant him, that they were the first to do him homage. Accordingly, on the 16th of July, 24 days after Edward's death, young Richard was crowned without any opposition. The truce with France was expired near three months before Edward's death. The king of France was making vast preparations to complete the expulsion of the English out of all the places they held in France; whilst at the end of the last reign, and at the beginning of this, the English seemed wholly unconcerned about the war. And so, whilst five armies were employed in different places to finish the work in France, the French made several descents upon England, burnt Hastings, Portsmouth, Dartmouth, and Plymouth, and plundered the Isle of Wight. For this the people blamed the king's uncles, who took upon them the administration of affairs till the parliament should meet; not considering that they had neither money nor forces, nor any lawful authority to raise them. The parliament met in October, and gave the regency of the kingdom to the three uncles, joining with them some bishops and lay lords. This mortified the duke of Lancaster, the eldest of the uncles, a prince of a haughty temper, who had flattered himself with the hopes of being sole regent. Whilst preparations were making to guard the coasts, and to oppose France, the king of Navarre put Cherbourg into the hands of the English, as the duke of Bretagne soon after delivered up Brest to them. These places, together with Calais and Bourdeaux, might have been of great advantage to the English, as by means of these four towns they might have invaded France four several ways; but they made not a proper use of this advantage; and Richard, towards the end of his reign, gave up Brest and Cherbourg for a very inconsiderable sum. When measures were taken in England to assist the duke of Bretagne, the French court, in order to divert the storm from their own country, (according to their usual artifice,) encouraged the king of Scotland to make a diversion on his side. He accordingly broke the truce, and took Berwick by surprise; but the earl of Northumberland drew together a body of troops, and retook it by storm. In this siege, his son Henry Percy signalized himself with such bravery and resolution, that he gained the surname of Hotspur. In the mean time, hostilities continued to be carried on in several places, between the French and English, without any general action or decisive battle. Whilst the nation was involved abroad, and those about their king had more regard to their own private interest than that of the public, a surprising insurrec-

tion broke out, which threatened the whole kingdom with destruction. The parliament had imposed a poll-tax, whereby all persons above 15 years old were obliged to pay 12d. a head, the monks and nuns not excepted. This tax was levied with great moderation at first; but at length, being farmed by divers persons, who having advanced such a sum to the king, were to have what they could raise by it, these farmers and their collectors levied the tax with great rigour, in order to enrich themselves. One of the collectors having demanded of a tyler at Deptford, whose name was Walter, from thence called Wat Tyler, 12d. for one of his daughters, the father refused to pay it, alleging that she was under the age mentioned in the act. The insolent collector attempting in a way not very modest to satisfy himself of the truth of this, Wat took up a hammer, and knocked out his brains. The people took his part, and promised to stand by him. Immediately the populace rose in Kent, and chose Wat Tyler for their leader; and they were soon followed by those of Essex, under the conduct of Jack Straw. To the poll-tax were added other grievances; the little care taken by those at the helm to guard the coasts against the French, notwithstanding the large sums that had been raised for that purpose, the extortion of the judges and lawyers, the oppression of the nobles, &c. These grievances being inflamed by seditious spirits, and, as some say, by the monks, who thought themselves aggrieved by the poll tax, the people rose in great numbers, and Wat soon found himself at the head of 100,000 men. With these he marched directly for London, freeing all the prisoners as he went along. This formidable mob proceeded to the utmost extravagances; they cut off the heads of those lords, gentlemen, judges, and lawyers, they could lay hands on; and bound themselves by oath never to own for king any whose name should be John; which was occasioned by their hatred to John of Gaunt, duke of Lancaster, who at this time was gone to the borders to negociate a truce with the Scots. Being come to Black-Heath, Wat Tyler reviewed his army, and continuing their march towards London, took and plundered Southwark. Shortly after he entered London, the city mob opening the bridge gates to him, in spite of the magistrates. Here this enraged rabble committed the most horrid ravages, burning and plundering the houses of the judges, lords, and principal citizens. Then they seized the Tower, and finding there the archbishop of Canterbury and the high treasurer, they without any ceremony or delay cut off the heads of both of them. The king and council were exceedingly distracted and alarmed at these furious proceedings, and in great perplexity what course to take to put a stop to them. At last it was resolved to offer the rebels a charter confirming the people's liberties, and a general pardon; which those of Essex accepting, returned to their homes. Wat Tyler still continued at the head of 30 or 40,000 men; and the king coming to Smithfield, sent to desire him to come and confer with him. Wat returned a haughty answer, that he would come when he thought fit. He however set forward at the head of his troops, and meeting the king in Smithfield, they had a conference together, both on horseback. He made such extravagant demands, that Richard knew not how to answer him; and now and then he would lift up his sword, as if he threatened the king. This insolence so enraged Walworth, mayor of London, who was by the king, that he struck the rebel such a furious blow on the head with his sword, as instantly killed him. The rebels seeing their leader fall, were about to revenge his death, when the young king, with a courage and presence of mind that could hardly be expected from his years, cried out aloud to them, 'My friends, will you kill your king? What, though you have lost your leader! I will be your captain, follow me.' With that, turning his horse about, he put himself at their head, and marched to St. George's Fields. The rebels, imagining he had declared for them, readily followed him. When they were come thither, they presently saw a great number of citizens well armed, whom the mayor had raised, marching towards them. And thinking the whole city was coming out against them, they immediately threw down their arms, and the whole multitude was soon dispersed, without the loss of one life but that of Wat Tyler their leader. There were much the same kind of insurrections in Norfolk and Suffolk; but the bishop of Norwich, putting himself at the head of some troops, quickly suppressed them. Those in Essex began also to stir again; but the king marched against them, and defeated them. Great numbers were slain, and others were taken and executed; among whom was Jack Straw, their leader. He confessed, if they had succeeded, their intention was to kill the king, to extirpate the nobility, and the clergy, except the Mendicant Friars, to divide England into several kingdoms, to make Wat Tyler king of Kent, to abolish all the old laws, and make new ones. This formidable insurrection was in the year 1381, and did not last above a month from the beginning to the end. A marriage having been concluded between king Richard and Anne of Luxemburg, sister of the emperor Wenceslaus, she arrived in England, and was received with great pomp and magnificence; soon after the troubles were appeased. The same year the king granted a power to the bishops to imprison heretics; but the house of commons soon got it revoked. In 1385, the Scots, by the assistance of France, as well as the French themselves, were preparing again to invade England. This alarmed the court, and made them so exert themselves, that in a little time Richard was at the head of a very numerous army, some even say, 300,000 men. Though with this army he might have subdued Scotland, he made little or no use of it. Instead of pushing the Scots vigorously, who would not have been able to stand before him, he employed himself in ravaging the country about Edinburgh, whilst they slipt by him into Cumberland, and committed terrible devastations. And though he might have intercepted them in their return, he omitted to do it, and returned ingloriously into England. It must be owned, indeed, that marching with the greatest part of this army first towards the southern part of this island, he, by the intelligence which the French had of the great number of his forces, prevented the invasion from France, which was at the same time intended. Richard's chief favourites now were, Nevil, archbishop of York, Robert de Verre, earl of Oxford, whom he created marquis of Dublin, (the first who bore the title of marquis in England,) the duke of Ireland; Michael de la Pole, son to a merchant in London, whom he made earl of Suffolk and high-chancellor; and judge Tresilian. These, by humouring his passions, got an absolute ascendant over him. That they might engross him to themselves, they inspired him with jealousy of his three uncles, especially the duke of Lancaster, persuading him that he aspired to the crown; whilst these could not without indignation see persons of obscure birth or inferior rank engross all the king's favour and confidence. These jealousies and animosities proved fatal to the king himself, who always loved those best that flattered him most, and were for justifying whatever was agreeable to his inclination. These favourites were become so odious, that when the king demanded a subsidy from the parliament, on account of another French invasion that was threatened, instead of answering his desire, they presented an address for the removal of his favourites. Richard was exceedingly enraged at this proceeding, and said, 'That to please the parliament he would not turn out the meanest scullion in his kitchen.' A few days after, he sent to the chancellor in an imperious manner to renew his demand of the supply. But the two houses uniting on this occasion, peremptorily refused it, unless he would first remove the favourites. Things were even upon the point of coming to a rupture, when the king, thinking better of the matter, complied. After which the duke of Ireland's estate was confiscated by order of parliament, and the chancellor was obliged to restore all the grants the king had made him; which done, the parliament appointed fourteen commissioners to manage affairs jointly with the king. But so fickle and imprudent was Richard

that, as soon as the parliament broke up, he recalled his old ministers, and caressed them more than ever, who now made use of all their arts to be revenged on their enemies. The duke of Gloucester, the youngest of the king's uncles, who had acted vigorously against them, was the chief object of their resentment; whom they endeavoured to get poisoned, but he escaped for that time. The remaining part of this reign was nothing but confusion, and a series of arbitrary measures. The ministers formed a design of making the king absolute, which Richard was very well pleased with. 'Twas agreed that he should raise an army, to terrify the duke of Gloucester, and the other lords his associates; as the earls of Arundel, Warwick, Nottingham, and Derby, which last was eldest son to the duke of Lancaster. Then a parliament was to be called, which was to be wholly at the king's devotion, and none to be returned but such as were set down in his list. For this purpose, he sent for all the sheriffs and judges to Nottingham, and communicated to them his design. The sheriffs refused to comply; but the judges were not so scrupulous as to what was referred to them. Being asked whether the king might not turn out the 14 commissioners appointed by parliament, and annul what other acts he pleased, they replied, That the king was above the laws. And some through servile flattery, others compelled by menaces, signed this opinion. The king then issued out commissioners for levying an army; but so few were willing to serve him, that he was forced to desist. And all he gained by this was, that by discovering his designs, he increased more and more the hatred of the people. The duke of Gloucester and the other lords, alarmed at these proceedings, and knowing that the chief aim of the court was their destruction, resolved to take arms; and, as they were in great credit with the people, soon raised an army of 40,000 men. This threw the king into great perplexity, but he thought the best way was to amuse them by fair promises, whilst the duke of Ireland went and raised an army in Wales; which he soon did, but being met by the earl of Derby, in Oxfordshire, was defeated, and forced to fly into Holland. From thence he went into Louvain, where he died about 3 years after. In his baggage, which was taken, was found a letter from the king, ordering him to march with all speed to London, and promising to live and die with him. It was also discovered, that he designed to make up matters with France at any rate, in order to have the assistance of that crown to reduce his subjects to obedience. Richard's measures being thus defeated, he took shelter in the Tower, and the lords immediately marched their army to London. They demanded a conference with the king, which, in the circumstances he was in, he durst not refuse. They upbraided him with the Nottingham plot, and all his other measures to destroy them, and to make himself absolute. He seemed much affected, and shed tears at this remonstrance; and it was agreed, that he should meet them the next day at Westminster, in order to settle with him the government. But they were no sooner gone from the Tower, than he altered his mind, and sent them word he would not meet them. Hereupon they let him know, that if he did not come, they would choose another king. Frightened at this declaration, he not only came, but consented to the banishment of his favourites. As to the judges, they were taken off the bench, and sent to the Tower. The parliament meeting in Feb. 1380, several persons were impeached of high-treason. Some were banished, and had their estates confiscated. The chief justice, Sir Robert Tresilian, and some others, were hanged at Tyburn. After this, a general pardon was passed for both parties, the king renewed his coronation oath, and all the lords repeated their oaths of allegiance to him. During these transactions, the duke of Lancaster was in Spain, endeavouring to possess himself of the crown of Castile, which he claimed in right of his wife, eldest daughter of Peter the Cruel. At his return, the king invested him with the duchy of Guienne, not out of any affection for him, but with a view of having him at a distance. Though matters had been thus made up, the unhappy temper of the king soon threw all in confusion again. Being now come of age, he was resolved to take the government into his own hands; when it soon appeared, that he was not at all disposed to rule with moderation according to the laws, but that he was fully resolved to follow the opinions and maxims of his late favourites. His queen being dead, he married Isabella, daughter of Charles VI. of France, and made a dishonourable truce with that crown for 28 years. The dukes of Lancaster and York, seeing how matters went, quitted the court; and the duke of Gloucester, who had taken the freedom to upbraid the king, his nephew, on several occasions, was treacherously seized, hurried over to Calais, and there smothered between two feather-beds. The earls of Warwick and Arundel were apprehended, and sent to the Tower. The king now took more timely and effectual methods to have a parliament at his devotion. He changed all the sheriffs, and the magistrates of cities and boroughs, and suffered none to continue in place, but such as would be subservient to his will. A packed parliament being by such means obtained, they stuck not at sacrificing to the king's and his ministers' resentment, the first lords in the kingdom. Thomas Arundel, archbishop of Canterbury, was banished, and his estate confiscated: the earl of Warwick sentenced to perpetual exile in the Isle of Man. This parliament, so agreeable to Richard's mind, was adjourned to Shrewsbury, though in those days the parliament usually sat but one session. Here they established such maxims as were destructive to liberty and the constitution. They approved the opinion for which Tresilian and other judges had been condemned. Accordingly the judges, who attended during the session, decided, "That when the king proposed any affair in parliament, it was high treason to go upon any other business before the king's was dispatched." Thus this scandalous parliament, by humouring the king in every thing, was only hastening his ruin. So many great men being either dead or banished, and the parliament having given their sanction to his arbitrary power, Richard now thought himself above all restraint, and minded nothing but his ease and pleasure; whilst his ministers, wholly intent upon their own private advantage, let the affairs of the nation go to wreck. To shew what lengths the king and his ministers went to raise money, 17 counties were condemned of treason for taking arms under the late duke of Gloucester, notwithstanding the general pardon; and to save their estates were forced to give blank bonds, to be filled up with what sum the king pleased; and every one bound himself under great penalties, by what was inserted in these bonds, to stand by the statutes of the Shrewsbury parliament. Such tyrannical proceedings could not fail of making the nation very uneasy. And in the midst of the general discontent, a rebellion happened in Ireland, the infatuated king went over in person with his troops to quell it. He was no sooner gone, but a conspiracy began to be formed in England, to deprive him of his crown. The malecontents, after several consultations, resolved to call in the duke of Hereford, or Lancaster, who was now in France; and to that end wrote to the archbishop of Canterbury, who was also there, to communicate their design to him, promising to assist him to the utmost of their power. The duke laying hold of this opportunity to try his fortune, got a few ships of the duke of Bretagne, and embarking with the archbishop of Canterbury, and a small number of men, set sail, and hovered some time about the coast of England, to see if the people would declare for him. As soon as it was known that he was on the coast, they began to take arms in several places. Upon this the duke landed in July, 1399, near Ravenspur, in Yorkshire, where he was presently joined by the earl of Northumberland, and Henry Percy his son, with some troops; and the people flocked to him so from all parts, that in a few days he saw himself at the head of 60,000 men. The duke of York, whom the king had left regent, a man not much disposed for action, and the rest of the council, hereupon left London, and repaired to St. Alban's which they had no sooner done, but the city declared for the duke.

Soon after, the earl of Wiltshire, and the rest of Richard's ministers, thinking themselves not safe where they were, left the duke of York, and retired to Bristol castle; and the duke, finding it impossible to stem the torrent, withdrew to his own house. The duke of Lancaster first marched to London, where the citizens received him with the greatest demonstrations of joy and affection, as their saviour and deliverer. He then proceeded directly for Bristol, and laying siege to the castle, where the ministers were retired, became master of it in four days; when he caused the earl of Wiltshire, and some other of Richard's counsellors, to be beheaded, to satisfy the multitude, who were exceedingly enraged against them. And soon after the duke of York, his uncle, came in to him. Whilst these things were doing, the contrary winds hindered the king for some weeks from having any news from England. At last, when he was informed of the duke his cousin's descent, instead of coming over himself with his forces, he sent the earl of Salisbury before him to levy troops; which he did in Wales and Cheshire, to the number of 40,000. But having continued in arms for some time, and the king not appearing, they dispersed and returned home. Soon after the king arrived, and when he found how matters stood, and that all the nobility and people had declared against him, he was in the utmost consternation, and knew not which way to turn himself. At last he withdrew privately from the army, and went and shut himself up in Conway castle, in Wales. The duke of Lancaster being marched to Chester, Richard, in the extremity he was in, thought it best to throw himself upon his enemy's generosity, and even offered to resign his crown, provided he would spare his life, and allow him an honourable pension; and then went and conferred with the duke at Flint. From hence they set out both for London, where Richard was presently conducted to the Tower; and the duke having caused him to call a parliament, the day before it met, he repaired to the Tower, with a great many lords, and there Richard delivered up the crown and sceptre, and signed an instrument, confessing himself unworthy and unfit to govern the kingdom any longer; which instrument of resignation was the next day approved of in parliament. They then drew up several articles of accusation against him, upon which he was solemnly deposed, much in the same manner as Edward II. had been. The throne being thus vacant, the duke of Lancaster, as had been agreed, rose up and claimed the crown; and it was unanimously resolved, Sept. 30, 1390, that he should be proclaimed king of England and France, and lord of Ireland; which was done accordingly the same day. Thus ended the unhappy reign of Richard, in its 23d year. He seemed to be a prince of generous inclinations in his younger years, but afterwards being corrupted by flattery, grew excessively full of himself; most profusely expensive in pomp, and show, and diversions; assuming, arbitrary, cruel, and inflexible; which losing him the affections of his subjects, in the end, by a sudden and surprising revolution, lost him his crown. He had no issue by either of his two marriages. See HENRY IV. for the account of his death.

RICHARD III. (surnamed Crook-Back, duke of Gloucester) was proclaimed king on the 20th of June, 1483, by the name of Richard III. and was solemnly crowned, together with his queen, on the 6th of the following month. In the mean time, he appointed the lord John Howard earl marshal, and created him duke of Norfolk; his son Thomas Howard, earl of Surrey; William Berkley, earl of Nottingham; and the lord Lovel, one of his chief confidants, viscount Lovel, on whom he likewise conferred the office of chamberlain. He also released from confinement the archbishop of York, and the lord Stanley; and taking doctor Morton, bishop of Ely, out of the Tower, committed him to the custody of the duke of Buckingham, who sent him to Brecknock castle in Wales. Richard enjoyed the crown, which he had obtained by such unjust and cruel methods, but two years and two months; which whole time was spent by him in contriving methods to support himself on the throne; and by his enemies, in plots and conspiracies to pull him down, in which they at last succeeded, and at the same time deprived him both of his crown and life. As he could not think himself safe whilst his two nephews, the young king, and his brother the duke of York, were yet living, he resolved on the wicked expedient of dispatching them out of the way; which was accordingly done soon after his coronation. The two innocent children were still in the Tower, the government of which he had given to Sir Robert Brackenbury, one of his creatures. He chose to be absent from London whilst the hellish design was executed, that he might be the less suspected; and set out with the duke of Buckingham to visit several counties. Being come to Gloucester, he sent express orders to Brackenbury to put the two young princes to death. Brackenbury, more conscientious than Richard imagined, humbly desired to be excused. Upon which he sent him a written order, by sir James Tyrrel, requiring him to deliver up to the said Tyrrel the keys and government of the Tower for one night only. Brackenbury obeyed; and Tyrrel brought in two ruffians, Miles Forest and John Dighton, whom he had hired to perpetrate the horrid fact. In the dead of the night, when the princes were asleep, they entered the chamber, and rushing upon them, stifled them both in their bed, and then buried them under a little staircase. This, Tyrrel confessed, who was executed in the next reign. In 1674, some bones were found there, supposed to be theirs, which Charles II. caused to be put in a marble urn, and removed to Westminster Abbey. From Gloucester king Richard set out for the North, to quell some disorders in those parts; and coming to York, was crowned there a second time, in the beginning of Sept. At the same time, he created Edward, his son, prince of Wales, who was then ten years old. Having got rid of his nephews, and taking measures for renewing the foreign alliances, and endeavoured to make those his friends whom he most suspected, by giving them considerable posts and employments, particularly the office of lord steward of the household to the lord Stanley (who had married Margaret, countess of Richmond, mother of the earl, who was still in Bretagne.) Richard now thought himself very secure: but at this very time a conspiracy was forming, which, though it proved unsuccessful at first, in the end completed his ruin. The duke of Buckingham, who had been the chief instrument in placing Richard on the throne, was at the head of this conspiracy. He thought himself neglected by Richard, or, at least, not rewarded in proporion to the service he had done him. It is said, the king had broke his word with him, with regard to some lands he had promised to give him. However, he retired from court exceedingly disgusted, meditating nothing but revenge, and soon began to concert measures with Morton, bishop of Ely, his prisoner in Wales, how to dethrone the usurper whom he had lately set up. After several conferences, and thoroughly understanding one another, the scheme they fixed upon was to set Henry earl of Richmond on the throne. In this project they were sure of having all the friends of the house of Lancaster on their side, Henry being the only relict of that family. And in order to engage the Yorkists, it was thought necessary, that Henry should promise to marry the princess Elizabeth, eldest daughter of Edward IV. Matters being thus concerted, the first step that was taken was, by a trusty messenger, to acquaint the countess of Richmond with their design; who came heartily into it, and founds means privately to impart it to the queen dowager, in her sanctuary, who readily gave her consent that Henry should marry her daughter. This done, they each of them engaged their most faithful friends in the plot, and these drew in others; which indeed was no hard matter, as the usurper was universally hated by the nation. The countess then sent two trusty persons into Bretagne, to inform the earl her son of what was doing in his favour, and to invite him over. His condition there seemed not very promising for such an undertaking. But upon the duke of Bretagne's promising to assist him, he sent word to the countess his mother, that he should

be ready to come over in October. Though the conspirators took all imaginable care to conceal themselves, yet Richard had some confused intimations of a plot; and beginning to suspect the duke of Buckingham, ordered him to court; but he peremptorily refused to come, declared against the king, and took up arms, drawing together the forces he and his adherents had privately listed in Wales, and marched towards the western counties, in order to join his friends who were ready to rise there, and where the earl of Richmond designed to land. But the duke being stopped in his passage by a dreadful inundation of the Severn, which lasted six days, his whole army dispersed, and he being left with only one servant, went and concealed himself in the house of one Banister, to whom both he and his father had been great benefactors. Nevertheless, upon Richard's publishing a proclamation, offering a very great reward for apprehending him, he was basely betrayed by Banister to the high sheriff of Shropshire, and soon after lost his head. About the same time the earl of Richmond appeared on the coast of England, and was like to have fallen into the hands of his enemies; but he luckily escaped, and sailed back to Normandy, and from thence to Bretagne, to wait for a more favourable opportunity. In the mean time, Richard proceeded with severity against the conspirators, putting many of them to death, and gave an extraordinary commission to Sir Ralph Ashton for that purpose. Among others, Sir William Collingburn, a Wiltshire gentleman, was hanged, drawn, and quartered, for abetting the earl of Richmond's project, and for writing the following satirical rhyme on Richard, and three of his favourites.

The Cat, the Rat, and Lovel the dog,
Rule all England under a hog.

Alluding to Catesby, Ratcliff, and Lovel, who bore a dog for his arms, as one of Richard's supporters was a wild boar. But many to escape the king's severity, fled into Bretagne, to the earl of Richmond; among whom was Thomas Grey, marquis of Dorset, son to king Edward's queen. The storm being thus in appearance blown over, king Richard thought fit to call a parliament; which meeting on January 23, 1484, and being wholly devoted to the king, made no scruple to declare the issue of Edward IV. illegitimate, to confirm Richard's irregular election, and recognize his pretended right to the crown. Then they passed an act of attainder against the earl of Richmond, and all his adherents. But it was very happy for his mother, the countess, that nobody discovered her having any hand in the plot. The earl of Richmond had many English lords now with him, who had escaped to Bretagne, after the late disappointment, and assured him, that the nation in general were his friends; and the duke of Bretagne promised to continue his assistance. But here he was soon in great danger. For the duke being grown old and infirm, his prime minister, Landais one of very mean extraction, now governed all in his name; and made himself so odious to the nobility, and all the people of Bretagne, that to support himself against them, he sought foreign assistance, and believed he had a good opportunity of receiving it from king Richard, on condition of delivering the earl of Richmond into his hands. Nothing could be more agreeable to Richard, and a negociation was actually carried on between this hated king, and equally hated minister, for this purpose. In the mean time, the earl knew nothing of all this; but the bishop of Ely, who had made his escape, and, though abroad, had good spies about Richard, advertised him of the danger he was in. Upon which, with great difficulty, he escaped in disguise from Bretagne, and repaired to the court of Charles VIII. king of France, who had succeeded his father, Lewis XI. The generous duke of Bretagne was angry with his minister for giving the earl any cause of uneasiness, and permitted all the English to follow him; and not long after, Landais, for all his insolent proceedings, met with his deserved reward on a gibbet. The earl was very civilly treated at the court of Charles VIII. who at length promised him some assistance not so much out of regard to him, as to cause new troubles in England. Here also he had the satisfaction to see the earl of Oxford come to him, who had been imprisoned by Edward IV. in the castle of Hammes, in Picardy, but had now prevailed on the governor and garrison to declare for the earl of Richmond. Richard had intelligence, that something was also contriving against him in England, but could not discover by whom. After some time, he found out, that what was carrying on in favour of the earl, was chiefly grounded on his having promised to marry the princess Elizabeth. To prevent him therefore, he resolved to marry her himself. In order to this, by various plausible pretences, particularly by promising to secure the crown to the princess after his death, as the prince of Wales was now dead, and he had no other child, he so wrought on the queen dowager, that she delivered her five daughters into his hands. Then he took care to get rid of Anne, his queen, daughter of the great earl of Warwick, either by causing her to die with grief and vexation by his ill treatment, or by actually poisoning her. She would have been more pitied, if she had not married the murderer of her former husband, who was Edward, prince of Wales, son to Henry VI. Richard now made his addresses to the princess, his niece, but found her absolutely inflexible. In the mean time, as he grew every day more odious, many lords and gentlemen went over to the earl of Richmond, and offered him their services; others did the same to avoid being sacrificed to his suspicions; and those who staid at home, waited only for an opportunity to declare against him. All circumstances now concurring, the earl set sail from Harfleur, on the 31st of July, 1485, with only 2000 men, which France had lent him together with the ships to transport them. On the 6th of August he landed at Milford-Haven, and marching towards North-Wales, was joined by Rice ap Thomas, with a considerable body of Welch troops. As the earl was of Welch extraction, that country in general readily favoured his design. In a few days he arrived at Shrewsbury, where the inhabitants readily received him, and sir George Talbot brought him an aid of 2000 men. The lord Stanley, and his brother, sir William, raised forces, as if it had been for the king, but had given private assurance to the earl that they would join him at proper opportunity; which they did after the two parties were engaged, and were by that means the chief cause of the earl's success. King Richard having heard of the earl's landing, ordered all his forces to be drawn together at Nottingham, resolving to go in person and fight him. And the earl being no less desirous to decide the quarrel with one blow, resolved to go and meet Richard. In his march he was joined by sir Walter Hungerford, sir Thomas Bourchier, and several others, who deserted the king. The two armies met near Bosworth in Leicestershire, and the battle was fought on the 22d of August, 1485. The earl of Richmond was at first in danger of being worsted, when the lord Stanley joined him with 5000 men, and his brother with 2000, the king's army was entirely routed after a fight of two hours, in which he gave signal proofs of his valour and courage. In the heat of the battle, espying the earl, he rode furiously to attack him, and killed sir William Brandon, the earl's standard bearer, who stood in his way, and threw sir John Cheney, to the ground, who had taken the former's place. When he saw the day was lost, he rushed into the midst of his enemies, and was slain. It is very likely he was betrayed, and that some great men, who staid with him, held secret intelligence with the earl of Richmond. It is said, that on the very morning of the battle, before it began, the following lines were found fixed on the duke of Norfolk's tent door, who was slain fighting for Richard;

Jockey of Norfolk, be not so bold;
Dicky thy master is bought and sold.

Sir Richard Ratcliff was also slain; and the perfidious Catesby, being taken prisoner, was executed at Leicester. Thus fell king Richard, aged about 34 years, who, excepting his unjustifiable methods to get and keep the crown, may be reckoned no bad king. He took care to suppress vice, and promote sobriety and virtue, and had a great regard to the

due administration of justice, except where his crown was concerned. Lord Verulum says, he was in military virtue approved, and a good law-maker. He founded the college of Heralds, and made them a corporation. He was certainly endowed with great parts and abilities, which would have made him a truly great man, if they had been rightly applied. His boundless ambition made him aspire to the crown, and it was for the sake of that only, that he was guilty of all that treachery, dissimulation, and cruelty, which justly renders his memory detested. His body was found stript naked, covered with blood and dirt, and in that condition was thrown across a horse, with the head hanging on one side, and the legs on the other, and carried to Leicester; where it was interred. He was the last king of the Plantagenet race, who had swayed the sceptre ever since Henry II.

RUSSIA, (*Rúshia*) the empire of, is a large country partly in Asia, and partly in Europe, bounded on the N. by the Frozen Sea; on the S. by Great Tartary, the Caspian Sea, and Persia; on the E. by the Sea of Japan, and on the W. by Poland and Sweden. There were three countries that had the name of Russia; namely, Red Russia; White Russia, which comprehends Lithuania; and Black Russia, which comprehends the government of Kaluga, Moscow, Tula, Rezan, Voledimir, and Yaroslaf; and hence his imperial majesty takes the title of emperor of all the Russias. This empire, taken altogether, that is, with the conquests made in Asia, may be likened to a square, whose sides are 2000 miles each. The seas of Russia are the Baltic, the White Sea, the Frozen Ocean, the Black Sea, near the frontiers of Turkey, and the Caspian Sea. There are also five large rivers, namely, the Nieper, or Boristhenes, which runs between Lithuania and Poland; the Wolga, which runs through the middle of the country, and falls into the Caspian Sea; the Don, which after several turnings runs into Little Tartary, and falls into the sea of Asoph; the Dune, which running northward falls into the White Sea; and the Oby, which running north falls into the Frozen Ocean. It may easily be conceived that a country of such vast extent must be in different climates, and that the soil must be very different. The most fertile part is near the frontiers of Poland; insomuch that the inhabitants are able to supply their neighbours with corn; the N. part is not only more cold, but more marshy, and overrun with forests, inhabited chiefly by wild beasts. Besides domestic animals, there are wild beeves, rein-deer, martens, white and black foxes, weasels, ermines, and sables, whose skins make the best furs in the world. In Russia there are also large quantities of cotton and silk, with which they make all sorts of stuffs; the other merchandises are skins, furs, Russia-leather, tale, tallow, hemp, Russia-cloth, honey, wax, and almost all the merchandise of China, India, Persia, Turkey, and some European countries. The inhabitants in general are robust, well shaped, and of pretty good complexions; they are great eaters, and very fond of brandy. They were formerly the most ignorant brutish people in the world; but they are making a rapid progress in every social and elegant improvement and refinement. Their religion is that of the Greeks, and they depended formerly on the Greek patriarch, who resided at Constantinople. The church is governed by a patriarch, and under him there are four metropolitans, and eight archbishops. The emperor or empress is an absolute and despotic sovereign, and all the subjects are reckoned slaves. The ordinary revenue of this vast empire is 20,000,000 of rubles, which is partly drawn from contributions, partly from duties on merchandises, and partly from farms. The orders of knighthood are that of St. Andrew, St. Catharine, and St. Alexander Newski, which are all of late institution. The punishment of their criminals is very barbarous, nor have they always the privilege of a fair trial, for they extort confessions by racks and tortures. For the additions made to this empire by the partition of Poland, see POLAND.

They denied the resurrection of the dead, and even, like the Epicureans, a future state; affirming, as the others did, that the human soul perished with the body. They utterly denied the existence of angels, and of all spirits except of God. This dangerous and wicked heresy, as many learned men think, was occasioned by their wilfully mistaking the doctrine of their master Socinus, who used to press upon his disciples the disinterested love of virtue, insisting, that men ought to serve God, not as mercenary slaves do their masters, through fear, and for their own advantage, but for his own sake, and for pure love of virtue, without any expectation of reward. This doctrine, harmless in itself led them to conclude, though falsely, that their master had absolutely denied any state of future rewards. In consequence of their other principles, they denied likewise the providence of God, or that he concerned himself in any sense with the affairs of men. These atheistical principles rendered them justly odious to the people. How they could deny a divine providence is very unaccountable, since they received as inspired writings the Pentateuch, or five books of Moses, which are one continued history of the exercise of such a divine interposition in the affairs of the world.

It is said to have been built by the Phœnicians; and the Romans sent a colony here in the reign of Augustus, whence it had the name of Cæsar Augustus, which, by corruption, has been changed into Saragossa. It is large, handsome, and well built. The streets are long, broad, well-paved, and very clean, and the houses from three to six stories high. It is adorned with many magnificent buildings, and they reckon 17 large church houses, and 14 handsome monasteries, not to mention others less considerable. The townhouse is a sumptuous structure; in the hall are the pictures of all the kings of Arragon, and in the corner of it a St. George on horseback, with a dragon of white marble under him. Saragossa is seated in a large plain, where the Ebro receives two other rivers; and over it are two bridges, one of stone, and the other of wood, which latter has been thought the most beautiful in Europe. SA'TURN, *s.* [*Saturnus*, Lat.] in the Newtonian astronomy, is one of the superior planets. To the naked eye he appears less bright than any other planet, (the Georgium Sidus excepted,) on account of his great distance from us, but, as seen through a good telescope, he is the most elegantly adorned body in the system. His mean distance from the sun is 954,072 of those parts of which the earth's distance is 100,000, which is about 907,000,000 English miles, as deduced from the transit of Venus on June 3, 1769. By moving at the rate of about 22,000 miles every hour, he completes his immense circuit round the sun in 29yrs. 164d 7h. 21m. 50s. but his sidereal revolution is 12d. 7h. 14m. 52½s. longer. The time from one of his conjunctions with the sun, as seen from the earth, to the next, is 378d. 2h. 8m. 8s. His diameter is 10 1-10th as great as the earth's; consequently he contains 1030 times as much matter. Dr. Herschel has discovered that he turns round his axis at the prodigious rate of about 24,500 miles every hour, in 10h. 16m. 0. 2-5s. therefore his year contains about 25,140 of such days. The rotation is performed in the same way as that of the earth upon her axis. He appears, like the other superior planets, to be direct, retrograde, or stationary, according to his aspect with the sun, as seen from the earth; which proves that the sun, and not the earth, is the centre of his orbit. The greatest number of days he can be retrograde, in a synodic revolution, is 141, in which time the angle of retrogradation is about 7°. He does not move in the plane of the earth's orbi but is inclined thereto 2° 29′ 50″, intersecting the ecliptic i. two opposite points called his nodes, which, on August 21. 1781, were posited in 21° 50′ 8″½ of Cancer and Capricorn, according to Mr. Bugge's observation of the planet's passage through his descending node at that time. They move 55′30″ in 100 years. His eccentricity is 53,640, and greatest equation of his orbit 6° 26′ 42″. The place of his aphelion,

anno 1800, was in 29° 4′ of Sagittarius, having a progressive motion of 1° 50′ 7″ in 100 years. This planet, like Jupiter, has parallel streaks called belts, apparently on his surface; but that they are not so, is evident from their changeableness; some suppose them to be vehicles similar to our clouds, and designed for the like purposes; but of this nothing certain can be said. Saturn, according to Dr. Herschel, is encompassed with two concentric rings, which, like the moon, are opaque, receiving their light from the sun, and reflecting it on the planet. These rings are inclined 30° on the orbit of Saturn, intersecting it in two opposite points called the nodes of the rings, which are placed in about 17° of Virgo and Pisces. The rings, in a Saturnian year, are constantly carried parallel to themselves, similar to the earth's axis, and consequently the sun shines on the northern half for near 15 years without setting, and vice versa. The rings, considered as one, being a broad circular arch, having, in the opinion of Dr. Herschel, a spherical or spheroidical edge, is invisible, except through very powerful telescopes, when Saturn is about its nodes, on account of its thin edge being directed to us; but the more the planet is removed from them, the more open it appears. It is the most open when the planet is in 17° of Gemini and Sagittarius. Dr. Herschel computes the diameter of the larger ring to be 204,883 miles, and the distance of the two rings 2839 miles. The rings are equally distant from Saturn on every side, and the outer one has a revolution round its axis in 10h. 32m. 15s. 2 5ths. But these rings are not the only light reflected on the planet in the absence of the sun; he has likewise 7 satellites, or moons, constantly moving round him as their centre, so that there is no part of this huge planet but is constantly enlightened by one or more of these moons. They all move so nearly in the plane of the rings, the fifth excepted, that the difference cannot be perceived by our best telescopes. M. Cassini places the node of the fifth satellite in 5S. 5° upon the orbit of its primary. From the discovery of Herschel that the satellites of Jupiter move round their axes in the time they move round their primary, we may infer that those of Saturn have the like motion.—The periodical revolutions and distances of these satellites from the body of Saturn, expressed in semidiameters of that planet, and in miles, are as below:

Sat.	Periods.				Distances in Semi-diam.	Miles.	Diam. of Orbit
	d	h	′	″			
1	1	21	18	27	5⅔	176,000	1′ 27
2	2	17	41	22	5½	221,000	1 52

SCO'TLAND, the kingdom of, is the N. part of the island of Great Britain, which is now united to England, and both together make but one nation. It is bounded on all sides by the ocean, except the S. where it is separated from England by the river Tweed; towards the E. by Cheviot hills and the river Esk, and Solway Frith towards the W. It is generally reckoned 300 miles in length, from Aldermouth-head, near the isle of Mull, to Buchaness, and 250 in breadth where it is broadest. Besides the main land, there are 300 islands belonging to Scotland, some of which are very considerable. These are called the Western Islands, the Orkneys, and the Shetland islands. The air is generally wholesome, though colder than that of England; but it is purified by the winds, which are pretty strong and frequent. In the northern part the days in summer are very long. Here are many rich and fruitful plains, though what is called the Highlands is full of mountains and heaths. They do not want wheat, but the grain mostly cultivated is oats, as it will grow in the mountainous parts. The productions of Scotland are much the same as in England, though not in so great plenty. They

nave mines of several sorts, particularly of lead, with quarries of free-stone for building; so that the principal towns are constructed with nothing else. They have mines of very good coal, great quantities of which are brought to London, and is known by the name of Scotch coal. The fisheries in the surrounding seas are of great national importance, and will become a real source of wealth to the nation, when increasing commerce shall enable the inhabitants to form roads, erect villages, and open canals in the remote parts of the country. Scotland was an independent kingdom till James VI. was called to the throne of England; and in the reign of queen Anne, one of his successors, both kingdoms were united under the name of Great Britain. Sixteen peers are elected to represent the nobility, and 45 commoners, to represent the counties and boroughs, in the same parliament with that of England.
